I'm not sure what how these long lines should be handled by label layouts, it seems like there are three choices; 1) Don't change anything 2) Truncate long lines 3) Break up long lines into multiple lines.

Options two and three can be tricky since VB isn't always very good at letting you know how much space text is going to use based on the associated font name and size.

Hi John, If you don't want to use Excel you can always just use the "Display/Short, Medium, and Long" menu items. Answer "Currently selected log entries" to the prompt and also select "Printer" as one of the destinations. If you don't select "Printer" you can still print the info from the screen display using "File/Print".

Before using the "Display/Short..." menu item you need to select the calls you want to list. You can select these stations with a callsign search key of =D*2006* or even simpler ~2006 assuming you don't have any other calls in your log with 2006 in them.

Hi Mike,

I see the problem. How about a user set maximum number of characters per line and a warning? When selecting "Add QSL Label to List", the warning could pop up before adding the label. Then the use could manually fix the address lines before printing labels that overflow.

To: XMLog@yahoogroups.com
Subject: [XMLog] Re: Address labels

Hi Craig, The data for GM3TAL comes in from QRZ.COM as 4 lines with that long second line. It turns out that the "control" that "DX/Callbook Lookup (Ctrl+L)" uses for displaying this info automatically breaks up long lines into multiple lines - it's not something I do explicitly.

I'm not sure what how these long lines should be handled by label layouts, it seems like there are three choices; 1) Don't change anything 2) Truncate long lines 3) Break up long lines into multiple lines.

Options two and three can be tricky since VB isn't always very good at letting you know how much space text is going to use based on the associated font name and size.

1767. Selecting DXCC submittals

Yahoo group: XMLog
Date: 2006-06-20 15:23:18 UTC
From: Craig Bradley
Topic: 1767 Message: 1767

I am ready to submit for DXCC 20M. I would like to select all of the confirmed (and not accepted) QSOs in the log window so I can find the cards and set the Submitted field. The Worked/Confirmed report lists the QSO that I need, but does not select these Qs in the log window. Is there a way to do this?

Hi Craig, Doing a search with the QSL Confirmed field set to != and the DXCC Accepted field set to = will select all records with anything in the Confirmed field and also having a blank Confirmed field. Using = alone in a seach field means "match null" and != means "match not null". One of the more subtle (wierd?) XMLog conventions.

Hi Paul, XMLog is trying to create a "FileSystemObject" which is something that's supplied in the system file scrrun.dll. This file should get installed in your \Windows\System32 folder - check and see if it's there. This file is supposed to be "self-registering", that is, it tells the system about itself the first time you try to use it. Assuming it's where it ought to be perhaps it didn't get registered correctly. You can register it explicitly by selecting the Windows "Start" button and picking "Run" and entering the command

regsvr32 \windows\system32\scrrun.dll

Anyhow, it's worth a try. If that doesn't fix things I don't know what's going on...

Topic: 1767 Message: 1771

Hi Mike,

I tried that and I get 142 QSOs, I only need 29 to submit. The problem is I get all of the Ws, VEs, JAs, etc. It includes Qs for countries that have be accepted. I would be nice to just get the Qs in the Worked/Confirmed report (preferably only the confirmed), then you could use that list to go find the cards and set the Submit field to generate the submittal form. Some of the other reports end up selecting the Qs in the report, but this one doesn't.

Yahoo group: XMLog
Date: 2006-06-28 05:07:10 UTC
From: Craig Bradley
Topic: 1767 Message: 1775

Hi Mike,

Thanks, this is a great feature. However, the there are a couple of problems:

If I run the DXCC Submission Summary for 20M with the Include "accepted" entries checked, I get the report and 146 entries selected in the log window (this looks correct, but I didn't count the confirmed 2 and add them to the confirmed 1 totals).

If I run the same report with out the "accepted" un-checked I get a report with only the confirmed 1 and 2, but I still get the same number of selected entries in the log window, many more than in the report.

If I start the program over and run the DXCC Countries Worked/Confirmed report, it does not select any entries. If I then double click on a call sign in the report, I get a pop up box titled "Move To Entry" that says; "Can't move to this entry because it is not among the selected entries. Would you like to select all entries?" followed by the Yes and No buttons. If I click Yes, then all of the entries in the log are selected and the one that I double clicked is displayed.

I know, I should have been a professional software tester, some people think that I can break anything.

1776. Montenegro new DXCC imminent

Yahoo group: XMLog
Date: 2006-06-28 18:21:48 UTC
From: Dave Sergeant
Topic: 1776 Message: 1776

Montenegro has today been accepted as 192nd member of the United Nations as reported by Reuters so has met the requirements for a seperate DXCC. It is even rumoured that it will count from tomorrow June 29th. In due course it will be allocated a new prefix, E6 has been suggested, in the meantime YU6, YT6, 4N6 and 4O6 will count as Montenegro.

What do we need to do to the XMLog country files to get it to recognise the new DXCC from the qualifying date (and those before it to remain as Serbia/Montenegro)?

Should be a few exciting days!!

When we hear the official prefix assignment I'll post a new beta version but those of you who want to add the "un-official" prefixes now can edit your prefix definition file. Use an editor like WordPad to open the file "prefixes" in your XMLog install folder (usually c:\mlog). Scroll down past the two-line entry for E4/Palestine and add these two lines:

E6,Montenegro,EU,15,[43.8/-19.2],,
E6,YT6,YU6,4N6,4O6,!,

I'd like to wait and see what the ADIF index will be before I post a new XMLog version but if they don't assign one promptly I'll go ahead and post one without the ADIF number and post yet another version with the ADIF info.

Don't edit out the "Montenegro" from "Serbia and Montenegro" until we see what the DXCC decides to do. Who knows, they may add Serbia as a new country and make Serbia and Montenegro a deleted country.

Topic: 1776 Message: 1779

Thanks Mike. I had already gone ahead and edited it in as YU6 as the E6 is apparantly only a rumour at the moment. You should also include YZ6 in the list of prefixes. I have already edited out the 'Montenegro' from 'Serbia and Montenegro', I can always put it back again...

I have two prefix files, prefixes and prefixes.new in my installation folder which appear identical. Is prefixes.new redundant?

Now all I need to do is to hear some of these chaps and work them. No activity heard yet!

----- Original Message -----
From: W1AW Mailing List

SB DX @ ARL $ARLD026
ARLD026 Montenegro is newest ARRL DXCC entity

ZCZC AE26
QST de W1AW
DX Bulletin 26 ARLD026
From ARRL Headquarters
Newington CT June 29, 2006
To all radio amateurs

SB DX ARL ARLD026
ARLD026 Montenegro is newest ARRL DXCC entity

A new ARRL DXCC entity has come into being! As expected, the United Nations admitted the Republic of Montenegro as its 192nd member June 28, and that action automatically makes the tiny Balkan nation the 336th current DXCC entity.

"According to the ARRL DXCC List criteria, entities on the UN list of member-states qualify as political entities," said ARRL Membership Services Manager Wayne Mills, N7NG. "Therefore, effective June 28, 2006 (UTC), ARRL has added The Republic of Montenegro to the DXCC List. Claims for DXCC credit will be accepted immediately."

Current Montenegrin radio amateurs reportedly may continue using their YU/YT/YZ/4O/4N-prefix call signs until the International Telecommunication Union designates a new call sign block for the new country.

In anticipation of Montenegro's new nation status, the International DX Festival Montenegro, with information on the web at, http://www.yu6scg.cg.yu/international-dx-festival.html, has been set for July 20 until August 12. That's when several international operators will join forces with Montenegrin Amateur Radio operators

from at least three different stations using a common call sign in an effort to meet the DX community's need to work the newest DXCC Entity. Festival organizers have set the ambitious goal of 200,000 contacts for the event, which will use all HF bands.

Montenegro declared its independence on June 3 following a national referendum May 21.

Kevin -

Here is the post that I think you wanted.

When we hear the official prefix assignment I'll post a new beta
version but those of you who want to add the "un-official" prefixes
now can edit your prefix definition file. Use an editor like
WordPad to open the file "prefixes" in your XMLog install folder
(usually c:\mlog). Scroll down past the two-line entry for
E4/Palestine and add these two lines:

E6,Montenegro,

EU,15,[43.8/-19.2],,
E6,YT6,YU6,4N6,4O6,!,

I'd like to wait and see what the ADIF index will be before I post a
new XMLog version but if they don't assign one promptly I'll go
ahead and post one without the ADIF number and post yet another
version with the ADIF info.

Don't edit out the "Montenegro" from "Serbia and Montenegro" until
we see what the DXCC decides to do. Who knows, they may add Serbia
as a new country and make Serbia and Montenegro a deleted country.

Hi Mike;
Hope ur 4th is great.
Sri abt this...but...I made the changes u suggested into the prefixes file. When I went to look in mlog folder there were two (2) prefixes files, one just prefixes and the other prefixes.new. I modified them both (using v.5.22). Then went to 'view-show dxcc country list' and no new E6 country is shown. I used notepad to modify both files. I'm using XP. When I hover the mouse pointer over each one, one says 'Type:new file (22.3kb)', the other says 'Type: file(23.4kb)'. I am wondering why "view-show dxcc country list" is not up-dated and why I have two prefixes files. Which file is supposed to feed the "view-show dxcc countries list" display? I am only asking u cuz I don't want to do something stupid and the program is running just great! 73/dx

Mike already answered your first question in a previous post. The
.new file is left over from the installation process and is unused,
you may safely delete it.

Did you have XMLog running while you were making the changes? You
should do it after exiting the program and it will only see the
changes after you restart it. I assume you did actually SAVE the
prefix file after you had changed it.

I did the change last week (I have actually called Montenegro YU6 as
the E6 is only what it is rumoured it might be) and it works just
fine. Montenegro shows under View/ShowDXCC... and it recognises all
the YU6 prefixes when I add QSOs - I worked YT6T the other day.

Kevin -

Here is the post that I think you wanted.

When we hear the official prefix assignment I'll post a new beta
version but those of you who want to add the "un-official" prefixes
now can edit your prefix definition file. Use an editor like
WordPad to open the file "prefixes" in your XMLog install folder
(usually c:\mlog). Scroll down past the two-line entry for
E4/Palestine and add these two lines:

E6,Montenegro,

EU,15,[43.8/-19.2],,
E6,YT6,YU6,4N6,4O6,!,

I'd like to wait and see what the ADIF index will be before I post a
new XMLog version but if they don't assign one promptly I'll go
ahead and post one without the ADIF number and post yet another
version with the ADIF info.

Don't edit out the "Montenegro" from "Serbia and Montenegro" until
we see what the DXCC decides to do. Who knows, they may add Serbia
as a new country and make Serbia and Montenegro a deleted country.

You should remember that if you add a primary prefix
(Say E6) and later it changes, then you may have to go
back and change the country code for each QSO!

1791. RE: [XMLog] bug with saving the station info?

Yahoo group: XMLog
Date: 2006-07-05 15:11:17 UTC
From: Craig Bradley
Topic: 1782 Message: 1791

I have occasionally seen this happen in my log. I usually do not have the Station Info fields turned on, so it is not obvious. Sometimes the program cannot look up the logged station's address, etc. in QRZ.com (I think that my DSL modem sometimes loses sync because of RFI). I wonder if that would cause XMLog to abort filling in fields?

Subject: [XMLog] bug with saving the station info?

I have xmlog 5.23 and this is what is happening:

I press Ctrl-A to add a new logging. It shows the "Station Info" OK (taken from my Station Info). I type the rest of the data in and press enter/or click "Add". In some cases my "Station Info" saves properly and in some cases it doesn't. I am using the station info to track operating from different QTHs so it's important to have that stored, too. Anyone seen this behavior?

I have my "Use Default for Entries" selected and also "Get FQ/Mode from rig" (they populate fine).

To: XMLog@yahoogroups.com
Subject: RE: [XMLog] Re: Selecting DXCC submittals

Hi Mike,

Thanks, this is a great feature. However, the there are a couple of problems:

If I run the DXCC Submission Summary for 20M with the Include "accepted" entries checked, I get the report and 146 entries selected in the log window (this looks correct, but I didn't count the confirmed 2 and add them to the confirmed 1 totals).

If I run the same report with out the "accepted" un-checked I get a report with only the confirmed 1 and 2, but I still get the same number of selected entries in the log window, many more than in the report.

If I start the program over and run the DXCC Countries Worked/Confirmed report, it does not select any entries. If I then double click on a call sign in the report, I get a pop up box titled "Move To Entry" that says; "Can't move to this entry because it is not among the selected entries. Would you like to select all entries?" followed by the Yes and No buttons. If I click Yes, then all of the entries in the log are selected and the one that I double clicked is displayed.

I know, I should have been a professional software tester, some people think that I can break anything.

1) Export ADIF
2) Open TrustedQSL and sign the file, you will get tq8 file
3) upload/email the tq8 file to LOTW

I'd love to see one button upload directly from LOTW but the steps above
works fine, too, just requires couple of extra clicks.

1803. Re: [XMLog] XMLog and LoTW?

Yahoo group: XMLog
Date: 2006-07-11 01:17:46 UTC
From: Kevin Nathan
Topic: 1800 Message: 1803

Hi Ted,

To achieve step 1, first hit the search button on the main screen. In the date box I think you can type >and the beginning date of your log. Then, click the search button. You should see a status line at the bottom of the page that will show something like 1 of *** where *** is the total amount of entries in the log. Now, click the import menu and then export to adif file. You will see a box that says which entries and it should be defaulted to all selected which is what you just did. Tell it the name of the file and you should be able to create the adif file. Then, you are on to the other steps in the process.

I hope this helps a little. Good luck and very 73.

Kevin :)

1804. Import ADIF options, v5.22

Yahoo group: XMLog
Date: 2006-07-11 05:34:59 UTC
From: Dave Sergeant
Topic: 1804 Message: 1804

The current versions have changed the way you import ADIF logs into XMLog (import/import ADIF File) in that now you have to check and approve no less than 4 screens before you get to the one where you select the file to import. As somebody who imports ADIF all the time I find this most annoying and is a big backward step compared with the single screen you got with the v4 versions. When I import I always want all the defaults, I don't want to have to go through this rigmarole every single time.

Apologies if this has been raised before, have only just updated to v5.

73 Dave G3YMC

http://www.davesergeant.com

1805. /MM logging

Yahoo group: XMLog
Date: 2006-07-11 15:09:26 UTC
From: Craig Bradley
Topic: 1804 Message: 1805

Mike,

I worked a /MM station last night on BPSK31. The station was YO4FPF/MM. When I logged the Q in XMLog, the country field was filled with a '?', as is should for a MM station. I looked up his lat. and long. and filled in the Grid field with RN50. All of this was OK. Then I ran an Awards/Grids/Grids Worked/Confirmed report for 2 character grids and Data, the Q did not show in the report. If I set the country field to Romania, the Q does show in the report. However, I do not want to log the Q this way as he was not in the country. It appears that XMLog will not put Qs in the Grid reports if the country is not filled in.

I am working on the new CQ DX Field Award and MM stations count for grid fields in this award. As about 2/3 of the field grids of the world are water, this is a good thing and finally allows MM stations to be used for an award.

Is this an easy fix? I don't know if countries are needed for other grid type awards. I only need this for the 2-digit reports.

Thanks & 73,

- Craig, AE6RR

Hi Craig, The "prefix" field is really geared to DXCC tracking where /MM stations don't count so filling in a country there will give you inappropriate totals for the various DXCC tracking reports.

Having a ? in this field should not affect the grid tracking reports. Dunno what gets counted for this new award - are the grid tracking reports good enough?

Hi Mike,

The new CQ DX Field Award is based on the 2-digit grid squares (CM, DM, etc.), there are 324 in the world and you need 50 for the basic award. See http://www.cq-amateur-radio.com/cqfieldaward.html for more info on the award. MM stations do count for this award if you get their location confirmed, this is good because over 2/3 of the Earth is water.

The grid reports are good for this award, although a few tracking fields like the other awards would be good. I have used the 2-digit report to get the basic award with 72 field squares confirmed. I first exported my whole log as ADIF, then created a new log and imported the ADIF having all of the QSO looked up on QRZ.com. This filled in many of the grid fields. Then I ran the grid report for 2-digit grids. I was even able to save the report and import it into Excel to make my own submission form. Try running the report on your log; you will probably qualify for the award. I currently have 84 worked and 79 confirmed. The next award level is at 100 confirmed. Honor roll is at or above 175.

The problem is though that the MM QSOs do not appear in the grid reports as the Country (prefix) field is not filled in. Is there some way to get the grid reports (at least the 2-digit one) to ignore this field (or make it an option for the report). I don't know if any other grid type awards need the country, but the Field Award does not.

Thanks for adding the 2-digit report and the QRZ.com grid lookup features in the past. That helped allot.

73,

- Craig

1811. Printing qsl info on back of card

Yahoo group: XMLog
Date: 2006-07-16 04:00:59 UTC
From: waltw1
Topic: 1811 Message: 1811

Greetings, from Atlanta,

I'm currently using XMLog, with great success, to print qsl labels that I paste to my cards. As I am close to ordering some new cards, my plan is to finish the front with some nice artwork and put the qsl info on the back. Instead of using a self-adhesive label, I want to run the cards through my printer and print all the info directly on the back of the card.

Does anyone use XMLog to do this? If someone does, would you like to share the print parameters that have to be entered in a custom format? I've been playing around with the program trying to set up a custom layout, but not with a lot of success.

My qsl cards are the standard 3.5" X 5.5" size. I sure would appreciate any help or suggestions for setting the printer up to print a box on the back.

Thanks, in advance.

Walt -

I do that. I am not sure that my techniques are perfect but I will be glad to share what I have with you.

It is early on Sunday morning and I am still half asleep, but I will do my best today to post some screen shots
and QSL scans on my web site for you. If I don't get back to you by this evening, please ring my chimes by
e-mail (senility is rampant here).

From: Mike McAmis
Topic: 1811 Message: 1813

Hi Walt, I print directly on my cards. I use a layout based on "Demo-Card-4 Info" which is set up for printing on a card that looks like "Demo-Card-4".

The biggest problem I found was that my Canon ink-jet printer can't print on glossy stock - the ink collects into tiny beads that don't dry and smear all over everywhere. I now have cards using a non-glossy stock which works fine.

From: Jim Henry
Topic: 1811 Message: 1814

I also print directly on to my QSL card. The method I use is to export the cards flagged for QSL to Excel then use Word to create a merged document. Its quite easy. Once the relevant documents are set up a few clicks on the mouse produces a printed card.

Hope this helps.

Thanks, Mike, but I was about to send an e-mail to you when I saw your post.

I guess that what I am looking for is a layout that I can use as a template. And I think that I may have found one ....DEMO-CARD-4. But I haven't figured out how to delete the black overprint on your layout. If I do that and remove the yellow backround, I pretty much have what I want. And I can show my station equipment, too.

Can tou help?

Thanks.

One of the demo QSL layouts provided with XMLog.

Click Options / QSL Labels Layout
Select Use Custom QSL Layout and scroll down the list to select DemoCard4
Click Custom
Click Modify
Click Preview to view a aample on screen
or
Click Print Test to print a sample

Mike -

Several folks have asked for the layout data for the "label" that
I print on the reverse side of my own QSL. I wonder if you can suggest
a convenient way for users to swap their QSL label layouts (with other
users) without the recipient having to manually enter every line of the
layout data?

I have Access on my machine and I can see that possibly the layout data
could be copied from the database (beginning at the header and
continuing to the end of the layout) and e-mailed to another XMLOG user.
But I suspect that many users do not have Access installed and I do not
know how they would otherwise be able to insert this data directly into
their
Layout database. (And I do not know if this would work anyway!)

I suppose there is no real answer to this, but if you have any ideas I would
like to hear them.

Thanks and 73 - Don N4TN

1823. selecting QSL label to print

Yahoo group: XMLog
Date: 2006-07-18 13:31:21 UTC
From: radio_k4rv@peoplepc.com
Topic: 1823 Message: 1823

In XMLog I have created several custom QSL labels. How do I select the one I intend to use?

The same one of my custom labels always prints, but I would like to use another.

Thanks
Tom K4RV

> The same one of my custom labels always prints, but I would like to use another.

Click Options / QSL Labels Layout
Select Use Custom QSL Layout and scroll down the list to select the desired layout.
Click Save.

From: Mike McAmis
Topic: 1811 Message: 1825

Hi Don, In regards to exchanging label layouts you are certainly on the right track. Since all the info is saved in an Access database there isn't any convienient way to exchange this data. Folk familiar with Access can use it to move the data between two copies of the layouts.mdb file but be sure to save your original copy before diddling. One thing to remember when diddling any XMLog database with Access - NEVER answer yes to that "do you want to convert?" message. When you answer no you will see a message saying you can't update the database, but what it really means is that you can't update the structure of the database - you can add/delete/edit records.

I suppose the "right" way to do this would be adding export/import menu items for layouts but I don't think there would be enough interest to justify the effort.

1826. Hacking Demo-card-4

Yahoo group: XMLog
Date: 2006-07-18 14:37:33 UTC
From: Mike McAmis
Topic: 1826 Message: 1826

Hi, Here's some guidelines on how to make changes to the Demo-Card-4 labels layout.

First, you don't want to hack the original so make your own copy of the layout:

Select "Options/QSL Labels Layout"
Click on the "Custom" button
Use the drop-down selector to pick "Demo-Card-4"
Click on the "Copy" button and supply a name
Use the drop-down selector to pick your new layout
Click on "Modify"

Now for the tedious part... The idea for Demo-Card-4 was that it was to be the layout for your QSL card printer and then when you had the cards in hand you would use Demo-Card-4-Info to print on the cards. Now if you want to use Demo-Card-4 to print your own cards plus the info the first thing you want to do is get rid of that yellow background color for the card and for all the fields. First click on the "Color" button and then click on the white square and then click on "OK" - this changes the background color for areas of the card that aren't covered by any defined fields. Now you need to change the background color for each defined field - this means selecting each line in the layout that defines a data or text field and then clicking on the "Modify" button in the "Layout Fields" box. Some of these text fields are used to create black areas on the card, you'll find that these fields have both the foreground and background set to black so leave these as is. The other text fields should have thier background color set to white.

As I said, the process is quite tedious but in the end you should be able to get what you need (but not what you want?).

1828. Re: /MM logging

Yahoo group: XMLog
Date: 2006-07-18 14:57:09 UTC
From: Mike McAmis
Topic: 1804 Message: 1828

Hi Craig, As you have discovered XMLog doesn't include QSOs with a prefix of "?" in any awards report. This action has roots that reach back to the original DOS versions that only handled DXCC award tracking. I looked into changing the awards tracking such that this filtering only was applied to DXCC but I found that this had an unpleasant side-effect. Since QSOs with a ? prefix got ignored it has become a common way to keep QSOs in your log that may be for busted calls, "not in log", etc. I must admit that these QSOs should proabably be deleted but most folk (including myself) are reluctant to do this. As a result when I fiddled with turning off this filter for non-DXCC awards I wound up having these "busted" QSOs included in the reports.

I can't see any easy way out here. In your case I think you can probably get by if you edit your /MM QSOs and update them to have the appropriate prefix if you remember that these will show up in your DXCC reports.

Topic: 1827 Message: 1829

Hi Nelson, Tell you what - if we don't hear anything official by next Monday I'll go with E6 and post it then. I've already got some code ready that would update the log if a different prefix gets assigned but hopefully this won't be required.

From: Craig Bradley
Topic: 1804 Message: 1832

Hi Mike,

Thanks for checking this out. How about allowing some code to be put in the Country field that is not a real DXCC "country", but a pseudo code? As MM is taken, we would have to use something else. Any chance that this might work? If they show up in the DXCC reports, they would be for a bogus country.

From: D.W. Jones
Topic: 1811 Message: 1833

Mike -

I think that you are already doing it the right way - I would not change a thing about the structure.

My experience has been that while it is a little confusing at first to learn how to create or modify the layouts, it definitely is worth the effort.

I now order my QSLs printed only on one side with no mailing address or QSO information shown. I periodically select the QSOs in XMLOG that need to be QSLed, stick a stack of cards in the printer, and let it rip. I print the entire
reverse (non-glossy) side with the QSO info (up to 5 QSOs), my address, any QSL VIA info (for the bureau), my rig info, awards, county, grid square, personal history and all that other stuff that no one wants to see (except me).
It is a fun tool and a really great feature of XMLOG.

I thank you for it.

From: radio_k4rv@peoplepc.com
Topic: 1823 Message: 1834

Gerry, W3GER,

Thanks for your response.

I have 3 custom QSL labels; A, B, and C
When I click options / qsl labels layout
scroll down and select C, A prints.
When I click options / qsl labels layout
scroll down and select B, A prints.

A always prints no matter what other custom format I select.

There must be another problem.

Thank you, though.

another.

Click Options / QSL Labels Layout
Select Use Custom QSL Layout and scroll down the list to select the desired
layout.
Click Save.

From: Mike McAmis
Topic: 1823 Message: 1836

Hi Gerry, One thing to remember is that the layout is associated with a label when you add the label to the list of labels waiting to be printed. If you select a new layout it does not affect the labels that are already waiting to be printed.

It is possible to hack this this list of labels waiting to be printed, they are saved in a file named "labels.out" and this file can be edited with a simple text editor like WordPad. You'll see that each block of info for a label contains a line "Layout=xxx".

Hi Tom--

I guess you've seen Mike's recent response on this. I guess I was presupposing that after you SAVE a custom layout you start a new label list, but perhaps I was mistaken in that. If it's still the same label list, edit in the desired layout.name.

Topic: 1823 Message: 1838

Thanks, Guys!

Mike's analysis solved my problem.

(1) Labels/ erase QSL Label List

(2) then save the wanted label configuration

(3) then select a new list of labels by any available means

after I did the above it all worked just fine.

Thanks again / 73

1839. Version 5.24

Yahoo group: XMLog
Date: 2006-07-24 17:31:46 UTC
From: Mike McAmis
Topic: 1839 Message: 1839

I've just posted version 5.24 at www.xmlog.com/beta

This version includes a couple of bug fixes and adds Montenegro (E6)
and Swain's Island (KH8/S) to the DXCC list. If Montenegro is
assigned a prefix other than E6 by the ITU a later version of XMLog
will be posted that will automatically update your logs.

Mike - W1ECT

1840. RE: [XMLog] Version 5.24

Yahoo group: XMLog
Date: 2006-07-25 15:06:41 UTC
From: Craig Bradley
Topic: 1839 Message: 1840

Hi Mike,

Thanks for the new version.

A couple of comments:

1. How about adding E5 for the Cook Islands? This is official and
E51CG and E551JD are QRV.
2. Regarding the /MM grid report issue, could we use a deleted entry
prefix (how about *MM)?
3. The DXCC Submission report selects all of the "accepted" entries in
the QSO window whether or not the "Include accepted entries in report" box
is checked. The report is correct.

Thanks for the continued support.

73,

- Craig

Mike,
Thanks for all the hard work guy.

I have found a bug (I think) in the 5.24 version.
When I edit an entry for a YU contact made before the
new prefix went into affect, XMLog changes it from
Serbia & Montenegro to just Serbia. The total DXCC
count does not change but it changes the country name.

Thanks es 73

Since Swain's doesn't have any officially "unique" callsigns XMLog won't automatically guess callsigns for this DXCC country. Be sure to do a "View/Show Callsign List" and add KH6SI as Swain's I. (KH8/S).

Watch the DX bulletins for other Swains's I. callsigns that should also be added to the callsign list. While checking your favorite bulletin also look for other prefixes that fall into this category such as 3D2 (Fiji, Rotuma, Conway), E51 (N. and S. Cook), FO (Austral, Marquesas, ...), VP8 (Orkney, Shetlands, ...), and of course all the TO callsigns that get assigned to various French pacific DX-peditions.

1849. Re: SWAIN works perfectly

Yahoo group: XMLog
Date: 2006-07-29 15:19:23 UTC
From: Mike McAmis
Topic: 1843 Message: 1849

Hi Steve, If you want to log the new DXCC countries or add their calls to the callsign list the best way is to upgrade to the current version at www.xmlog.com/beta. For versions previoius to 5.24 you can edit your prefixes file. Use an editor like WordPad to open the file prefixes" in your XMLog install folder (usually c:\mlog). Scroll down past the two-line entry for E4/Palestine and add these two lines:

E6,Montenegro,EU,15,[43.8/-19.2],ADIF=514,
E6,YT6,YU6,4N6,4O6,!,

Thanks Mike,
I did that and it's perfect now.
I also worked YU6AO and XMLog added it fine.

Thanks for you support!

1852. Montenegro Prefixes

Yahoo group: XMLog
Date: 2006-07-30 21:44:31 UTC
From: Mike McAmis
Topic: 1852 Message: 1852

It seems that definition for Montenegro prefixes should include
variations using 3's as well as those using 6's. For those that don't
want to wait until the next XMLog is posted here's the appropriate
prefix file line that should replace the current info:

E6,YT3,YT6,YU3,YU6,YZ3,YZ6,4N3,4N6,4O3,4O6,!,

This corresponds to what the various DX bulletins are saying...

Mike - W1ECT

1853. Query bug in the current beta

Yahoo group: XMLog
Date: 2006-08-03 16:38:55 UTC
From: Dan Shepherd
Topic: 1852 Message: 1853

Hello Mike,
When I select entries by a certain criteria, and then
select one of the ?canned? awards queries and run it
against the selected entries, it does not retain the
selected entries. I get a new group of entries from
that award list.

An example:
I select all 6M contacts for this year by entering
?>=1/1/06? in the date field, then ?>=50.000,<=59.000?
into the frequency filed.
I get the expected result of 394 contacts listed.

Now I choose DXCC from the Awards list, select Mixed
mode, and Currently selected log entries, and I see my
results of 15 DXCC worked.

Next I could choose WAS from the Awards list and get
that total, except now my selected entries have been
narrowed to the 30 entries that are listed in the DXCC
report and not the original 394.

I would have to refresh the log and go through the
date/freq selection again and then do a WAS query.

In past versions, it retained the original set of
entries and I could do several award tracking queries
based on the original list.

I tested this using V5.19 and it works just fine, but
in the current beta V5.25 it does not.
This is not a major problem, just wanted to let you
know.

Thanks es 73

1854. Re: Query bug in the current beta

Yahoo group: XMLog
Date: 2006-08-05 14:07:34 UTC
From: Mike McAmis
Topic: 1852 Message: 1854

Hi Dan, Previous to version 5.23 some Awards/xxx reports would set your "currently selected records" to those that were included in the report while others did not. In 5.23 I made it consistent - any Awards/xxx report that displayed callsign lists now reset the "currently selected" records. I see from your example that this is not always what you would want. I suppose that it might be best to add an option to the report dialog that would let you control this action.

Hi Ron--

XMLog displays all the SELECTED entries.
When you first open a log, NO entries are selected.

Hit the SELECT button, then the SEARCH button.
That will select ALL the records, and they'll be viewable.

It would be nice because I use a narrowed group to
generate reports for awards not listed, like 2M WAS
and such.

Thanks for the support Mike.

Mike,

If you are working on this, there is still a problem with the DXCC Submission tracking report. If you run the report with the "Include "accepted" entries in report" UNCHECKED, the accepted entries are still selected for the log window. This would be very useful when preparing a submittal. If all of the Qs to be submitted are selected, you could find the card, double click the Submitted field and step through the list before printing the submittal form.

Sorry Dan, I was one of those that wanted the change for DXCC submittals. Sounds like another selection box would be in order.

Hi Dan, I've posted a new XMLog version at www.xmlog.com/beta that includes a "reset currently selected entries to those in report" option. This option is displayed for any Awards report that displays a list of callsigns or QSOs. This version also fixes the problem with the Awards/Worked+Confirmed report and the "included accepted" option.

From: Mike McAmis
Topic: 1863 Message: 1864

Hi Mal, I don't have a good way to isolate the last 25 QSOs but here's a way that will work. Select all records and go to the last record, make a note of the QSO number. Now do your arithmetic to get the number of the "first QSO of the last 25", i.e. last-24. Now scroll back to that QSO (the mouse wheel is nice for this). Make a note of the date. Now you can do a search for date >= than this QSO.

This might not result in 25 QSOs if this wasn't the first QSO you made on that date! You'd then have to edit the ADIF file to delete those first QSOs... What a mess eh?

Well I hope this isn't something you'll need to do very often - I've never been in a situation where I've needed to do selections by QSO number.

First thanks for all the replies. Let me explain my problem. I am a big 'rah-rah' supporter of LOTW. I have both DXCC & WAS via LOTW. My logbook contains approx 15000 entries. The last file I uploaded to LOTW was Field Day and then imported the Field Day log from CT into XMLOG. Since Field Day I worked approx 25 stations including the new KH8. I want to be able to select those QSO's and export them as an ADIF file for further upload to LOTW.
In other words I want to export, to ADIF, all the QSO's between 06/27/06 to 08/01/06.
I hope this clarifies my problem...

Hi Mal, If you want to create an ADIF file containing QSOs within a certain date range first do a log search with the "Date" field set to something like >=7/1/06,<=7/31/06 This example would select all records in July, 2006. Then select "Import/Export ADIF File" and set the record selector to "Currently selected records".

LoTW will not import dupes either unless the time stamp is different. I once downloaded some Qs from Writelog to LoTW, then I imported them into XMLog and inadvertently sent them to LoTW again. The Qs from Writelog had seconds in the time field and the once from XMLog did not, so LoTW thought that they were different and they are in there twice. There is no way to delete them, but according to the LoTW people at ARRL, it doesn't hurt anything.

If you download the same Qs from XMLog twice into LoTW, they will not duplicate, so you do not have to be too careful. I select my Qs based on the date by just selecting all Qs with dates greater than or equal to the last date that I uploaded every month and it work fine.

Good luck & 73,

Craig: Here is an example directly from LOTW:
N7MAL W1ECT 2004-01-25 04:38:20 160M CW 1.800

I worked and got confirmed Mike, W1ECT, on 160M CW for the state of NH. No matter how many more contacts there are for W1ECT, how many minutes, or seconds, apart they are the contact only counts once towards WAS on 160. Yes other contacts will show up (insurance contacts) but only one is needed. I have other LOTW contacts confirmed with W1ECT and they count for award credit on the band/mode they are worked on.
The purpose/mission of LOTW is: "" ARRL's Logbook of the World (LoTW) system is a repository of log records submitted by users from around the world. When both participants in a QSO submit matching QSO records to LoTW, the result is a QSL that can be used for ARRL award credit."" LOTW is not some cutesy QSL Buro/Service it was designed solely to track contacts for prestigious ARRL awards.

1872. County line QSOs

Yahoo group: XMLog
Date: 2006-08-14 17:16:13 UTC
From: Risto Kotalampi
Topic: 1872 Message: 1872

I just noticed an issue with xmlog that impacts some few of us who are county hunters.

Very common way to work counties is to work a mobile on a county line and in that case it counts for both counties. Only way to track it properly in xmlog is to make duplicate log entries for both of the counties. That has been fine and works if the logging is done in xmlog. But the problem arises when it's logged elsewhere and imported from ADIF to xmlog. In that case, xmlog thinks the second logging is a duplicate and doesn't do it correctly. xmlog can either ignore the "duplicate" or replace the existing logging. This isn't correct way to handle county line logging. I would like to be able to import these apparently duplicate entries to xmlog.

Solution? Of course, the perfect solution would be to add a column to include the 2nd county. Less optimal would be to look for more parameters than just date/call/UTC/fq (or whatever it does check right now... apparently not the county) and include county & state to the duplicate checking function.

Hi Risto,

Do this entries have time stamps that are only different in seconds? If so, XMLog truncates the seconds and you may have entries with the same time in hours and minutes. Some logging programs such as WriteLog use seconds and could have 2 Qs with the same minutes but different seconds. Try changing the minutes on one Q to make them different if you can.

Subject: [XMLog] County line QSOs

I just noticed an issue with xmlog that impacts some few of us who are county hunters.

Very common way to work counties is to work a mobile on a county line and in that case it counts for both counties. Only way to track it properly in xmlog is to make duplicate log entries for both of the counties. That has been fine and works if the logging is done in xmlog. But the problem arises when it's logged elsewhere and imported from ADIF to xmlog. In that case, xmlog thinks the second logging is a duplicate and doesn't do it correctly. xmlog can either ignore the "duplicate" or replace the existing logging. This isn't correct way to handle county line logging. I would like to be able to import these apparently duplicate entries to xmlog.

Solution? Of course, the perfect solution would be to add a column to include the 2nd county. Less optimal would be to look for more parameters than just date/call/UTC/fq (or whatever it does check right now... apparently not the county) and include county & state to the duplicate checking function.

Topic: 1872 Message: 1874

I have another thought. If XMLog could store time stamps that include seconds, the dupes would not occur.

Mike, would that be a simple change?

Hi, Another way to make a QSO "unique" would be to diddle the frequency by a kHz.

Unfortunately it would be quite a project to expand XMLog the handle seconds. All this is handled in some of the oldest code that dates back to DOS days!

It is on the "todo" list along with fractional kHz values for frequencies.

Thanks for looking into this Mike. These type of things can definitely generate a ripple effect in the code too.

The new version is working good, I did a submission for a new band and had the cards checked today. I was very easy to find the cards and mark the Qs as submitted with just the Qs in the report selected.

1877. Version 5.28 is now the "official" version

Yahoo group: XMLog
Date: 2006-08-23 23:26:53 UTC
From: Mike McAmis
Topic: 1877 Message: 1877

I've posted version 5.28 at www.xmlog.com. This version supports the K1EL WinKeyer (www.k1el.com) and includes the new DXCC countries Montenegro and Swain's Island. The prefix used for Montenegro is E6 - if a different prefix is assigned a new version of XMLog will be posted that will update the E6 log entries automatically.

Mike,
I'm a long time user of Xmlog (using 5.19 now) and upon running the install on this new version (5.28) so far 3 times, am encountering an error message. Each time the install halts and states that one or more of the files on my computer are old. It states that I need to restart the PC and that the newer files will be updated. This is not occurring and I keep getting the same error message. My PC is running Windows XP. I'd appreciate your suggestions as to how to proceed.

1879. Locator field

Yahoo group: XMLog
Date: 2006-08-27 14:11:41 UTC
From: Dave Sergeant
Topic: 1879 Message: 1879

I am currently using v5.22.

When I enter a six digit locator in the locator field of a QSO or in my own station data (options/station info) I find XMLog changes the last two digits to lower case:

ie IO91PJ (my locator) changes to IO91pj when I press OK.

This worked normally in earlier versions.

Hi Dave, I've seen this format for IARU grid-squares described in several places but I'm not sure how official it is. Here's a example:

7. VUCC Grid Locators

"VUCC Grid" VHF/UHF Century Club grid location in IARU "Maidenhead" format by Folke Rosvall, SM5AGM (QST, W1XX, Jan & Oct 83)

Characters Type Area (Long/Lat) Name

1, 2 letters 20d by 10d "field" uppercase A-R, S*
3, 4 numbers 2d by 1d "square" 0-9
5, 6 letters 5m by 2.5m "sub-square" lowercase a-x

Mike - W1ECT

1882. Re: [XMLog] Re: Locator field (Grid-square format)

Yahoo group: XMLog

From: Dave Sergeant
Topic: 1879 Message: 1882

OK, it seems some organisations imply the last two digits are in lower case. ARRL shows upper case, Wikipedia (http://en.wikipedia.org/wiki/Maidenhead_Locator_System) says USA and UK use lower case.

But in the UK it is ALWAYS upper case - six figure locators are the norm in VHF contests over here and I have never ever seen lower case ones used anywhere in published contest rules and results. In my case it is for submitting reports for the UK 60m experiment, which stipulates upper case for locators.

I suspect the original specs (which originated of course in Maidenhead just down the road from here) were for upper case. Maybe the use in GPS gear has changed things?

I have a colleague who is on the RSGB contest committee and writes VHF logging software - I will ask him for a definitive answer! I see his software only allows upper case locators!

Thanks

From: Mike McAmis
Topic: 1877 Message: 1885

Hi Glen, I've checked the differences between 5.19 and 5.28 and the only system file that has been updated is "scrrun.dll".

This file has caused problems in the past along with the associated file "msvcrt40.dll".

One thing to try is copying both scrrun.dll and mscvrt40.dll from the zip file to \windows\system32 and since they are not "self-registering" you'll have to register them by hand - do a "regsvr32 msvcrt40.dll" and "regsvr32 scrrun.dll" from a DOS window or from the Windows "Run" command (Windows Key+R).

I think the problem might be related to a file in \windows\system32 named "scrrun.dep". This file is supposed to list the dependencies that scrrun.dll has with other files. It seems that an old version of this file winds up lying around in the system32 folder even though it has been quite a while since scrrun.dll has had any dependencies. On my system I just deleted scrrun.dep because the bad dependency info was causing problems when I tried to build new versions of XMLog. So before doing the copy/registers noted above you can try deleting scrrun.dep, rebooting, and re-installing.

Hi Kevin, Even though the prefixes file for the latest XMLog version makes some reference to the new E5 prefix there still isn't enough info available to make the guess between North and South Cook Islands, in this respect things haven't changed from the ZK1 prefix days. So, when you see an E51 call listed in a DX bulletin somewhere be sure to add that call to the 'Callsign List' and associate it with the appropriate country.

Hi, I have been working on a demo version of XMLog that adds a lot of new fields, primarily for LOTW support, but the ITU zone is also included. This demo version will probably be available in 3-4 weeks and its purpose is just to see how people feel about the new look. This demo only displays the new fields, they don't get recorded in the log file.

Of course more fields means a bigger log window (space is the final frontier) and more complexity...

1899. Version 5.31

Yahoo group: XMLog
Date: 2006-10-29 16:35:57 UTC
From: Mike McAmis
Topic: 1899 Message: 1899

I've posted version 5.31 at www.xmlog.com/beta This version adds a couple of new features - all the Awards reports can now be displayed using Excel, and a new "World Map" window is available.

I don't know how useful the World Map will be but I got inspired to see how hard it would be to implement this feature after seeing something similar in MixW.

I was originally going to include it as an option for the "Show QSOs" window but I wound up making it a seperate window that is displayed using the "View/Show World Map" menu item. The map is a great circle map with your QTH as the center and paths are drawn to desinations that match calls chosen using the same technique used by the Show QSOs window - either the call currently displayed in the log window or the last call single-clicked upon in the Packet window.

Mike - W1ECT

1900. Version 5.31

Yahoo group: XMLog
Date: 2006-11-01 00:12:09 UTC
From: witstock7
Topic: 1899 Message: 1900

I just "installed" the newest release but it is not useable. When I try to open it I get the small screen with the introduction to the new version but clicking on OK or the X does nothing. I have to go to the Ctrl - Alt - Delete keys a couple of times to just get rid of that screen. There were no problems at all with previous versions and it looks like I'll have to revert to the last one to be able to do my logging.

Hi Nelson, That's not much to go on. What I will probably have to do is build you a special version of the 5.31 mlog.exe file that has some debugging dialogs like "Starting to initialize xxx', and so on - this will let me find out where it's hanging up. But first email a copy of your mlog.ini file as an attachment (not in the body of the message) to support@...m . This file is located in your XMLog install folder, usually c:\mlog

1906. Editing Past Entries In the Notes Field

Yahoo group: XMLog
Date: 2006-11-06 00:18:48 UTC
From: mefazamy
Topic: 1906 Message: 1906

I've been using v. 4.96 for a couple of years. I want to go back into some previous log entries and enter some info in the "notes" field. It will be the same comment for all the entries. It'll probably be several hundred entries. I know you can do it one entry at a time, however I don't want to do that. Is there a way to add comments to the "notes" field en masse to a bunch of entries?

73, Evan
KB2AMY

1907. Re: Editing Past Entries In the Notes Field

Yahoo group: XMLog
Date: 2006-11-07 15:38:39 UTC
From: Mike McAmis
Topic: 1906 Message: 1907

Hi Evan, XMLog doesn't have any feature that would allow editing multiple Notes fields. In theory it would be possible to select the records you want to edit, write them to an ADIF file, edit the data, and then import the ADIF file with the "replace existing records" option. But if you've ever looked at an ADIF file you'll see that the Notes info shows up as COMMENT and includes a "character count", e.g.

<COMMENT:8>Whatever

So this technique of mass editing would only be practical if you were setting the Notes field for each record to the same value.

In any case, before experimenting - backup your log file!

From: Michael McCarthy
Topic: 1908 Message: 1908

FYI: I just started testing out the new Windows Vista
OS and found that xmlog crashes. I have the entry
window, packet and spot history windows up. As soon
as a spot comes through, it gets posted to the history
window and xmlog crashes. I haven't done any other
testing because of this.

In general, Vista is a real pig.

1910. Montenegro - YU6 or E6

Yahoo group: XMLog
Date: 2006-11-23 21:16:08 UTC
From: Dave Sergeant
Topic: 1908 Message: 1910

When the announcement was made about Montenegro being a new DXCC the suggestion was made that a permanent new prefix might be E6. But that was just a rumour. Any new prefix needs ratifying by ITU and I understand from G3PSM (IARU Region 1 manager) that it will need putting to the next conference WRC-07 and won't come into effect till sometime after that. Until that time use of E6 for Montenegro is pure speculation and it could be completely different (Z7 has also been suggested).

Unfortunately some logging software, including XMLog and LOTW, has jumped the gun and already calls Montenegro E6. But eQSL, SD SuperDuper and others refer to it as YU6.

I had previously modified my XMLog prefix files manually and put Montenegro in as YU6 because I did not agree we should call it something that it might not ever be and we certainly won't hear any E6 calls for some time. Having just updated to 5.28 I found some of my previous entries were displayed as 'unknown prefix' as YU6 was no longer found in the updated file. I have corrected my prefix file again.

This sort of confusion is going to continue until we know the final prefix of Montenegro. When it finally becomes a totally different prefix we will have a lot of logs which are very difficult to maintain correctly as far as country totals are concerned. It is difficult to keep track of all these changes, but changing the prefix purely based on speculation does not help at all.

1912. Error - 'Cannot open log..'

Yahoo group: XMLog
Date: 2006-11-27 14:11:30 UTC
From: Dave Sergeant
Topic: 1912 Message: 1912

I have recently installed XMLog on a new XP Home machine, having used it on my 98SE for a few years.

I have several logs - my main station log and seperate ones for eQSL and LOTW returns. XMLog opens fine with my default station log. But if I try and open one of the others (File/Open Old Log) I get the following message:

'Cannot open log 'C:\mlog\eqsl.log'
(3049) Can't open database 'C:\mlog\eqsl.log'. It may not be a database that your database recognises, or the file may be corrupt.'

If I click OK and do it again it opens normally, and will do so first time every time until XMLog is closed. Similarly with my other logs, they fail to open the first time then OK.
Sometimes I get a 'file in use' error instead, but it follows the same pattern.

I was initially using 5.22 and updated to 5.28 but it made no difference.

1916. Re: Cook Islands

Yahoo group: XMLog
Date: 2006-11-28 21:04:04 UTC
From: Mike McAmis
Topic: 1908 Message: 1916

Hi Craig, XMLog is handling Cook Islands (E51) the same way it did back in the ZK1 days... Since North Cook and South Cook can't be seperated by callsign XMLog can't guess the country from the call. The best way to handle this is to scan your DX bulletins for announcements for Cook Island DXpeditions and use the "View/Show Callsign List" to associate the appropriate country with each callsign. Also, when you see DX cluster spots for calls like this (as well as 3D2, VP8, etc.) sometimes the spotter will add a comment that lets you the correct country - in this case go through the same process to add the call to the Callsign List.

Hi Mal,

Yes, he is on Raratonga, I thought that I had a new one. I think that the Cook Is. are using E51 for everyone, including N. Cook, so we may need to manually pick the country if we are lucky enough to find someone on N. Cook.

However, the E51 calls still show up in red on the band map and I have ZK1 confirmed.

Hi Dave, XMLog is only using "E6" for Montenegro until the official
prefix gets assigned. When it is assigned XMLog will automatically
update your logs to reflect the official prefix.

Topic: 1912 Message: 1923

Hi Dave, I've done some web searching to see if I could find any mention of when this "database corrupt, (#3049)" error might occur when the database (your log file) is obviously not corrupt since you can open it ok on the second try.

One thing you might try is before running XMLog you can go to your XMLog install folder and delete the Access "lock file" associated with the log - if your log file is xxx.log then delete xxx.ldb. This is a long shot but it seems to have helped one guy...

Also you should check your Windows and Office update status. Instead of going to the "Windows Update" page that most people use try the "Microsoft Update" page at:

update.microsoft.com

which updates both Windows and Office.

There are no .ldb files in my install folder (C:\mlog).

I did that. I don't have Office installed here so it only found the XP updates. But that is not to say there are no updates to the access files. The XP installation was off an SP2 CD so would be pretty up to date anyway and I have since done all the Windows updates.

I have noticed that when you click OK to the warning message it leaves you with no log file open. If you then try and open a different log which you haven't opened before in that session you get Error 3045 'Could not use 'xx'; file already in use' - which it obviously isn't.

By the way the PC is set up for a single user (me) with admin priveledges.

Just had a thought whether it is my AV resident scanner (F-Prot)
causing the problem. When I tried it just now it worked flawlessly
with it both enabled and disabled. Will repeat a test with the AV
turned off when I reboot in the morning.

But I have been using F-Prot on the 98SE machine for years without
any problem...

Hi, It seems there are a lot of VU7LD/whatever calls out there and it's a bit of a pain to add them all via the "View/Show Country List" menu item.

For you hackers out there, exit XMLog, edit the dxcalls.ini file that resides in your XMLog install folder and add these lines at the bottom of the file. It's best to use NotePad to do this so that the file remains a simple text file...

Hi Mike: Merely changing the prefix from ZK to E51 won't cure/solve anything. Whenever anyone goes there the callsign database has to be updated to reflect what call goes to what island. There is no defined block of letters assigned to North or South. There are just certain places, in the world, where any logbook user, not just XMlog, must add the appropriate call to the logbook database. There are several others that come to mind, FO, JD1, VK0, and now VU where the user of any logging program needs to update the callsign database.
Just my minus 2 cents worth..... Thanks for your effort

1932. Callsign List - E5, VP8, 3D2, FO, etc.

Yahoo group: XMLog
Date: 2006-12-04 20:16:58 UTC
From: Mike McAmis
Topic: 1932 Message: 1932

For the most part the appropriate DXCC country can be "guessed" based on the callsign. However sometimes a call can't be guessed because:

1) A callsign block is allocated to an island group that includes several DXCC countries.

2) French TO and TM prefixes can be assigned to any French possesion.

3) Some countries don't have unique Antarctic callsign blocks.

4) Special event or other "custom" callsigns may not follow the normal callsign allocations.

XMLog tries to handle these mystery callsigns by letting you add them to a "Callsign List" where you can associate the correct DXCC country to specfic calls. Use the "View/Show Callsign List" menu item to edit this list.

It's best to subscribe to a DX newsletter so that you can add these special calls before they appear on the bands. Two good sources of DX information are:

1) If you are an ARRL member you can get a weekly DX bulletin by going to www.arrl.org and clicking on the "Member Data Page" in the "Members Only" box. Next pick "Modify membership data" and then enable the DX bulletine. If you have never used any "Members Only" feature you'll have to enable it first.

2) You can try a trial subscription to W3UR's "Daily DX" bulletin at www.dailydx.com

As you scan your bulletin, here's which countries to look for along with their most common prefix:

Spratly I. (1S)
Rotuma I., Conway I. (3D2)
Peter I., Bouvet (3Y)
North/South Cook Is. (E5)
Austral Is., Marquesas Is. (FO)
Ogasawara (JD1)
S. Shetland, S. Orkney, S. Georgia, Falkland Is. (VP8)
Andaman/Nicobar, Lakshadweep, Is. (VU7)
Antarctic calls
French TO and TX calls

Some of these calls may be guessed correctly without having to add them to the Callsign List. A quick way to see if they need to be added is use the "View/Show QSOs and Check Call WIndow" menu item

(F4) and type in the call - if it shows the correct country it doesn't need to be added.

An advantage of printing with XMLog is that I never have to transcribe information onto the cards-- the QSO-specific information is already captive in the log, and gets on the cards automatically. (I use a handwriting font, in blue) and at first glance it looks like ballpoint pen.)

The time I've spent "futzing" with layouts probably exceeds the time I've saved-- but I had FUN in the process!

Hi Gerry,

I will have to try it out.

I often do large batches of cards (20 or so) after a contest and I was wondering how it works with the mailing labels.

I normally print all of the QSL labels and the mailing labels at the same time. Then I peal the QSL label off, stick it on the card and then put the mailing label on an envelope. I can then keep them together while I write a note on the card and get the SASE or IRC together with the package. I don't print the call letters on the mailing label for security reasons, so it could be tricky to match the correct label with the card when doing a large batch. Do you have a method for this?

In two batches, or intermixed in one batch?

If the former, it might be easier to print on "two by" labels and create a
layout that treats two side-by-side physical labels as a single label
(prints QSO info on one and the address on the other).

I print the QSL labels and the address labels in the same batch and they come out next to each other. I do use Avery 5260, 3x10 label sheets, but just peal an address and a QSL label for each in sequence and it works out just fine, if I put the cards in the envelope flap immediately.

1943. 40m PSK31 QSL does not confirm 40m

Yahoo group: XMLog
Date: 2006-12-07 07:05:29 UTC
From: Craig Bradley
Topic: 1943 Message: 1943

Hi Mike,

I just received a QSL from Asiatic Russia (UA9).

It is logged as UA0ZEO, PSK31 on 14.070 MHz, the country shows UA9 - Asiatic Russia, the QSL record has a good confirmed date.

The DXCC checklist shows UA9 CNF on TTY but not on 40m, it is ACC for SSB and 20m.

When I read the DXCC rules, it doesn't say anything about mode for the band awards. Is something wrong?

1946. rig control problem icom 746

Yahoo group: XMLog
Date: 2006-12-11 05:23:40 UTC
From: Steve Woodruff
Topic: 1946 Message: 1946

Howdy,

I'm having problems using the rig control function of XMLog. I use a MicroHAM USB interface which works 100% fine with WriteLog, so its not a question of the interface between rig and computer.

In XMLog i use the default settings for IC746 and it seems to get the freq and mode from the radio... but it also keys it up into transmit mode and never unkeys it until i go into rig settings and hit save. Then as soon as i go to enter a new contact it keys up the rig and never unkeys it. I've experimented with a couple of the settings but always get the same result (or worse, such as rig timeout).

Any suggestions?

Steve N9OH

For those of you wondering what the problem was, it was just a mix-up between the band marked on the QSL and the frequency entered.

1948. Re: rig control problem icom 746

Yahoo group: XMLog
Date: 2006-12-11 22:47:45 UTC
From: Mike McAmis
Topic: 1946 Message: 1948

Hi Steve, XMLog just sends two commands; one to set the mode and a second to set the frequency. These commands are pretty much the same for all Icom rigs so it seems unlikely that they are causing the problem.

I wonder if your MicroHam interface also provides other functions that is shares on the COM port. It could be that they also provide CW or PTT control? It could be that when XMLog is brings up one of the control lines on the COM port (like DTR or RTS) this is keying the rig? Of course this assumes that you have the PTT or CW line connected via the interface. By the way, if the RTS line is causing the problem it can be disabled by setting "Flow Control" to "None".

Hi Steve,

I have a microHAM microKEYER connected to my TS-2000 and I don't have any problems.

I have a preset tab for XMLog in the microHAM USB Device Router with the following settings:

Control: COM4

FSK: none

2nd FSK: none

CW: none

PTT: none

2nd PTT: none

Foot Switch: none

Win Key: COM5

I suspect that the PTT setting is your problem.

If you want to be fancy, you could even color code the horizontal lines in the Spots Map window.

Writelog does something like that for the mode of the contest.

1966. qsl labels - missing function?

Yahoo group: XMLog
Date: 2006-12-28 06:37:02 UTC
From: Steve Woodruff
Topic: 1966 Message: 1966

I ran into a problem today while doing qsl labels... it seems the Ctrl-Q key can be used to add a QSL label to the list to print. However, there is no Ctrl key to add a mailing label to the list to print.

What I would really like to see is a single control key that would let you add both a QSL label and a mailing label at the same time (for the current QSO) to the list to be printed.

Is this possible already and i'm overlooking it?

Thanks,

Steve N9OH

Hi Mike,

I have found a similar problem, I don't know if it is related or not.

I am using the microHAM USB Device Router on my laptop with the microKEYER at home. COM4 is the rig control and COM5 is the Winkey port. When I use it without the micoKEYER at my 2nd QTH in the mountains, XMLog complains about "cannot open COM5". I have a USB to serial plugged in for rig control on COM4, but XMLog will not access the rig frequency, etc. If I turn off CW Options and Port select to NONE, then it works OK with the rig control on COM4. I do not have the CW keyboard window open.

Now that I know what the problem is, I can deal with it, but it is a bit strange. I just have to remember to set the option correctly for the 2 QTHs. I thought that you would want to know about this.

1971. Alt key shortcuts and Windows XP

Yahoo group: XMLog
Date: 2006-12-29 16:01:33 UTC
From: Mike McAmis
Topic: 1971 Message: 1971

I don't know how many of you out there use Alt key shortcuts but when Windows XP came along they became harder to use. A couple of examples of these shortcuts for the XMLog's Log Window would be Alt+F,O for "File/Open Log File" or Alt+X,U for "DX/Update DXCC Packet Status".

Older Windows versions used to automatically underline characters in the menu items to note the existence of these shortcuts. By default Windows XP doesn't display these underlines until you push the Alt key.

To change the way these shortcuts are handled:

1) Go to control panel and open the "Display" window
2) Go the the "Appearance" tab
3) Pick the "Effects" button
4) Un-Select the "Hide Underlined Letters..." option

1972. Problem setting printer mode

Yahoo group: XMLog
Date: 2006-12-30 13:16:09 UTC
From: GerryC
Topic: 1972 Message: 1972

Usually I print QSL cards two to a "half sheet" (8.5 x 5.5) of card stock in portrait mode, but occasionally I print four to a full (8.5 x 11) sheet in landscape mode.

I just tried the latter for the first time since migrating to a different computer, and had trouble.

OLD COMPUTER: NEW COMPUTER
Windows 98se Windows 2000
XMLog 4.96 XMLog 5.19
HP PSC500 printer Same printer
w/ Win98 driver w/ Win2K driver

Within XMLog (on the new computer) if I click FILE / PRINT SETUP, change the mode to portrait and then click SAVE, that does not "take"-- if I immediately try that again, landscape mode shows as still being selected. (And printing is indeed in landscape mode.)

If I change printer mode by invoking the START menu, then SETTINGS / PRINTERS, then it "takes". (And printing is correct.)

TIA for any ideas!

From: Craig Bradley
Topic: 1946 Message: 1974

Hi Mike,

I installed some updates yesterday and had to reboot the computer. After that I could not get XMLog to talk to the rig, even with the CW options off. After fiddling around with settings for a while it started to work. I don't know for sure what got it going. Then I closed the microHAM USB router software and it continued to work. I think that the microHAM router may not work correctly when the microKEYER is not connected, so I think that this is the best solution. I use a laptop for my Ham Radio applications and take it back and forth between the home QTH and the weekend home near Lake Tahoe. I only have a microKEYER at the home QTH, so I use a USB to serial at the mountain house. I think my best solution is to buy another microKEYER as I really like that unit.

Sorry about any false alarm, I don't think that there is any problem with XMLog now. I would advise anyone who is using the microHAM USB router to close it when the microKEYER or other microHAM unit is not connected.

1977. Incorrect 1A4A bearings

Yahoo group: XMLog
Date: 2007-01-02 22:16:31 UTC
From: Mike McAmis
Topic: 1977 Message: 1977

You may have noticed that the bearings/distances for 1A4A spots are incorrect. It turns out there is an error in the "prefixes" file. I'll fix this for the next version but if you want to hack your current version:

1) Exit XMLog
2) Use WordPad or NotePad to edit the "prefixes" file located in your XMLog install folder
3) Move down to the Malta (1A0) info
4) Change the 12.4 to -12.4

1978. Re: [XMLog] Error - 'Cannot open log..'

Yahoo group: XMLog
Date: 2007-01-04 10:07:32 UTC
From: Dave Sergeant
Topic: 1912 Message: 1978

Just an update to this problem I reported a couple of months ago when
I got a 'file in use' error when trying to open a different log file
in XMLog.

I subsequently proved it was my AV, F-Prot, interacting and blocking
access to the log file, and temporarily disabling my AV cured the
problem. This also explains why it only happened on the first
attempt.

Yesterday F-Prot released the new v6 of their AV, which is a major
upgrade of their package with many new features and a completely new
look. I am pleased to say that having installed this I no longer get
the access error with XMLog.

Perhaps you can make a note of this for future reference.

Sorry that didn't work Wayne. I am using XP and have had no problems since Mike fixed an installer problem many versions back. Maybe you are missing a file? There is a Windows repair feature in the XP that you could try. Do you have MS Office installed? I comes with some DLLs that may not be on your system.

Otherwise does it tell you what files are missing or out of date?

From: Craig Bradley
Topic: 1979 Message: 1987

Good new Wayne!

That was a tough one. Install problems are usually bears as no two computers are exactly the same.

- Craig

Subject: [XMLog] Re: Update XMLog

I found the problem! Microsoft web site indicates there is a coding error with scrrun.dll (Microsoft Scripting Runtime). I reinstalled SCR from their link and XMLog installed as expected. I am surprised that this has not caused me a problem before. Thanks for the help Craig and Mike.

1988. Great job!

Yahoo group: XMLog
Date: 2007-01-10 11:17:18 UTC
From: ad5uu
Topic: 1988 Message: 1988

From my experience with loggers: (only a year and half)

XMLog beats most of the freeware/shareware in ease of operation.

Against ACLog it beats it for overall ease of operation, the
integration of LOTW and contesting(extra $) is the only benefit.

So, Great Job Mike.

thank you

With the 5.33 beta, I'm having no better luck. Same symptoms.

Is CTS always set even when RTS is not? Could that be an issue?

Also.... it seems XMLog won't let you share a COM port for both rig control and CW keying? The MicroHAM USB device does both -- rig control and cw keying with a single COM port. Not possible with XMLog?

Thanks,

Steve N9OH

RTS is controllable from the computer. CTS is an
INPUT . If it is being asserted, it is coming from
the device you are attaching to. If RTS and CTS are
tied together as in a loopback or modem eliminator,
CTS should follow RTS.

1993. RE: [XMLog] Re: rig control problem icom 746 - Rig COM ports and RTS

Yahoo group: XMLog
Date: 2007-01-16 03:53:05 UTC
From: Craig Bradley
Topic: 1946 Message: 1993

Hi Steve,

Yes, I have a microHAM microKEYER (USB) and it work fine with XMLog. However, I am using two virtual serial ports in the USB Router (why not they don't cost anything). The rig control is on COM4 and the Win Key port is COM5 in the USB router. In XMLog, the rig control is COM4 and CW Options and Port Select is COM5. Select the K1EL WinKey button and under options use the default (WinKey type = WinKey). I am running version 5.32.

The rig control works correctly for reading the rig settings and for control via packet spots. They CW keyboard also works correctly and even displays the CW speed set by the knob on the microKEYER.

1994. Features for Beta

Yahoo group: XMLog
Date: 2007-01-17 02:48:52 UTC
From: k9mrd
Topic: 1994 Message: 1994

Here a couple of features on my wish list.

It would really be nice to see both the short path and the long path headings. (I can't calculate in my head any more!) Also, if the headings could be displayed when a logged contact is displayed would save a second prefix lookup.

From: hmmjr@comcast.net
Topic: 1995 Message: 1995

Here's one for the wish list. When the option "Display all entries for" is engaged it would be nice if the "Notes" field would display. I could care less for the "Prefix" column that currently displays which to me is apparent from the call sign. I put info in the notes that would be nice to easily access so I could see what we talked about on previous QSO's.

Hi Wayne, These sound like resonable changes (and better yet, easy to add!). One thing you can try for now is to leave the Check Call (F4) window open and it will display the bearing, etc. as you scroll through your log.

2000. Heading

Yahoo group: XMLog
Date: 2007-01-28 05:46:53 UTC
From: R Steve Dishmon
Topic: 2000 Message: 2000

I am confused as usual.

When I use the F4 and use the Check Call Window I get a completely out of reason degree heading and miles distance than when I use the DX ctrl L window for distance and heading. I mean completely way off. Example for a Florida station using the F4 I get 36 degrees 353 miles ctrl L I get 190 degrees and 507 miles. The DX or ctrl L is pretty close to being correct since I am located in North Carolina. 36 degrees sends me some were up north and Florida is south. My question is what is the difference between the two windows, and why don't they show the same. My latitude and longitude is set correctly in both XMLog and in Buckmaster callbook just in case one is using the heading and distance in the callbook because the DX or ctrl L and the callbook information are close to the same.

My other question is just exactly what is the QTH line in the log form used for. I cannot get it to look up automatically the QTH of the station I contacted and put his QTH information on it. It always stays blank until I fill it in manually. The only information I can find on it in the help file says its the location of the contacted station. I do have the use callbook for look up set and that works for the other information but not the QTH line.

Is there hope for me???????

Thanks
W4RSD
Steve

2001. Re: [XMLog] Heading

Yahoo group: XMLog
Date: 2007-01-28 17:20:49 UTC
From: Nelson Wittstock
Topic: 2000 Message: 2001

I use the QTH to add information to the "official" QTH listing. I add such things as "just ouside Denver" or other bits of trivia that are appropriate to the location rather than more personal things that I might put into "Notes."

As far as headings are concerned, I believe the logging program would have to know the coordinates of the other station's location and the callbook does not include this. Without that info the heading can not be computed.

From: zamba0321
Topic: 2002 Message: 2002

Hi,

I noticed that when running 5.33 XMLOG the transceiver won't jump to
frequency when I click on an empty area in the spots map. It does
only work when I click on a call.

It was usefull before to change bands to a certain area, I could just
click on the spots map to get the radio to tune to that frequency/mode.

This worked in all versions up to now it seems

other than that great program !

cheers
Joe

Hi Joe - you know, I notice the same thing and really
miss being able to do just that. I would watch the
indicated frequency in the lower right-hand box (below
he band maps) and when I had it where I wanted it, I'd
"left click" and be there - very handy.

Now I have noticed that if you "right click" you can
choose to "Set Rig to xxxx." While this works, I just
don't find it as handy as the previous way.

BTW - this is true with my K2 as well as the Orion II
and Mark V. Maybe Mike can make it work both ways?

2006. Re: Heading

Yahoo group: XMLog
Date: 2007-02-01 21:11:48 UTC
From: Mike McAmis
Topic: 2000 Message: 2006

Hi Steve, When you do a callbook lookup I get the latitude/longitude of the station from the callbook entry. At other times (like for the F4 window) by default I use generic latitude/longitude values based on the country, call region, or state/province. This is because callbook lookups can be quite slow (esp. if you are using qrz.com) and can cause annoying pauses... However you can go to the "Options/Callbook Setup" and try setting the "Use Callbook for Locations" option - you can always un-set it if you experience delays. Setting this option shouldn't cause problems if you have callbook data installed locally.

From: R Steve Dishmon
Topic: 2000 Message: 2007

Thanks Mike that is what I did and it worked out great. I have the callbook installed in the hard drive and there is no delay. Maybe if I have to go to QRZ.com then there might be a delay. I am using Ham Call callbook and like it better than Callbook. Since I use the USA part more than DX it works better than Callbook. I have not use Callbook in over 7 years so I don't know how it is now, but in years past the address's for USA hams were incorrect or the county was wrong. One example was mine they base it off your zip code and my zip code and county are different because I am in a different county than the zip shows. Thanks for all the help.

It probably has to do with the new "protections" of
Vista. You need to tell Vista that the program is OK
to run! However, when I tried it out a couple of
months ago (I am an MSDN subscriber and got it in
December) I found that it crashed a lot. I also found
that there are numerous other issues with more than
half of my existing software and decided not to go to
Vista any time soon.

From: g4cdz@aol.com
Topic: 2010 Message: 2010

Got a workaround to the problem starting XMLog in Vista..

Right click on the icon and check 'Run as administrator' having given 'Full Control' permission to the admin. Don't seem to be able to give similar permission to user ?

There was a good article in the December QST on page 95.

Eclectic Technology

Windows Vista: Should You Upgrade?

By WB8IMY

The bottom line was that the author recommended that you do not upgrade your hamshack computer yet, as much of your ham radio software may have problems and there is little to gain. On the other hand, he recommended it for your general purpose computer.

I keep two computers in my shack, a laptop with all of the ham radio software on it and a larger desktop for personal, business and programming work. I will probably wait for the SR1 release before upgrading.

Hi Barrie, Thanks for the info. I did a bit of web surfing to see what was out there concerning support for VB6 (Visual Basic 6) applications under Vista and found mixed news.

It seems like the permissions diddling you had to do is required for all VB6 applications. For example, here's another VB6 application user that came up with the same technique that you did:

http://forums.microsoft.com/MSDN/ShowPost.aspx?PostID=849234&SiteID=1

I found that Microsoft has committed to supporting VB6 applications for ten more years, even if they won't be able to take advantage of new system features (like the "transparent" look of the Vista User Inteface).

This is comforting since I did try to upgrade XMLog to the latest version of Visual Basic (.NET 2003) a while back but found that I didn't get any worthwhile improvements and the resulting program was huge and ran quite a bit slower (even after upgrading the code to use the latest database features, etc.)

I don't have a Vista machine available to test with and no doubt I won't have one in the near future so I'll be depending on brave folk like yourself to let me know how things are going.

Even though MS says they are going to provide VB6 support:

1) Some non-Microsoft controls that I use may not work correctly and I'll have to provide new versions that are XP/Vista compatible. Hopefully I won't be forced into a postion where I'll need different versions for Vista and non-Vista systems.

2) There may be bugs in the Vista VB6 legacy support that will require Vista updates.

One other question Barrie, did the install seem to run OK? I would think that this would be a prime candidate for system incompibilities to show up.

Mike
Install of your released version seemed fine.
Only other issue yet detected is that the 'Vista User Account Control' kicks in if I 'Show Packet Window at Startup' else XMLog 'Stops working'. If I 'Start Packet Window' subsequently, all seems ok.
I have to take the simple Tester approach to these issues as I have neither the experience or the tools to do anything more.

Regards and thanks

It going to be interesting to see how Microsoft handles these issues. I have read several times recently that they don't expect widespread acceptance of Vista for the next 5 years. Which just happens to coincide with the accepted rate of attrition of a person computer. The world just needs to go Linux.

Greetings Wayne:
I dont know what version you are using. I have 5.33 and I do have a small photo in mine with no problems. It is about 2 inches by 2 inches as far as a large one I have not tried that. I did that using the custom qsl option. Give it a try and see how it works out for you. I do know you must you the custom qsl option. The small one is super. I send MRC mobile reply cards for county so I use the MARAC logo as explained above.

Hi Wayne

I use several BMPs, GIFs, and JPGs on my custom QSL layouts.

Some have text printed in open spaces within them, but none have text
overprinting graphic portions of them-- which you may have if you want it
as a "background"-- you may have to fool around with assigning zero-sizes
to text fields and with layer numbers.

Hi Gerry, Mark, Steve, and all,

I got my custom qsl working. My image is the background and there is
no problem in layering text, lines, etc on top of it as long as
sequence numbers are used! Gerry pointed out the layering problem,
but all I had to do was set the sequnce number of the background
photo to #1 and then build the card over the top of it. I used
sequence numbers for all line items.

It worked very well (drag and drop would sure be nice), but I do have
one small problem. I am using Version 5.28, and I can only
download .bmp or .ico extensions to XMLog. I had to convert my jpeg
to a .bmp to make it work. I don't think the resolution is as good as
the jpeg. Just wondered if version 5.33 allows downloading jpegs.

Again, thanks for the help.

Hmmmm..... 'tis a puzzlement. Mike's documentation said only BMPs would
work, but I discovered that JPGs and GIFs work also with 5.19 (which I'm
still using and still printing QSLs with). I posted that to this group and
Mike replied (on Dec 6 2006):
==========QUOTE
OK, Well I was just going by what the documetation for the
graphics "control" that I use for labels. Always glad to hear that a
new feature has been added without me having to do anything. I'll
update the help file.
==========END QUOTE

Now I'm afraid to upgrade from 5.19!

2028. MMTTY operation with XMLog

Yahoo group: XMLog
Date: 2007-02-14 07:47:05 UTC
From: Craig Bradley
Topic: 2028 Message: 2028

Mike,

I jumped into the CQ WW WPX RTTY Contest last weekend using Writelog and MMTTY. However, for RTTY DXing, I use MMTTY and XMLog. Have you ever considered integrating MMTTY.exe into XMLog like the Writelog people have?

One other item; XMLog reads the mode from the rig and logs RTTY contacts as FSK, which is correct. However, when I upload files to LoTW, it rejects FSK as an error. It would be nice to be able to export ADIF files and replace FSK with RTTY or just have them logged as RTTY.

Thanks again for a great program!

2033. How to get comments onto eQSL from XMLog

Yahoo group: XMLog
Date: 2007-02-23 14:49:46 UTC
From: Kenneth Moorman
Topic: 2033 Message: 2033

I have been using eQSL for a month or so, and have noticed that some eQSLs I receive have comments, either personalized or just general info. I asked the question of the eQSL support how I would do this myself, and got the following response:

"No change is needed to your card design. QSL comments can be added via the on-line log entry screen or via the ADIF tag QSLMSG or QSL_Comment in uploaded ADIF files".

How do I do this in XMLog? Is it the "Notes" field on the "QSO Info" page?

Thanks,

Ken, NU4I

2034. Trouble entering my stations latitude/longitude

Yahoo group: XMLog

From: Leslie Elliott
Topic: 2034 Message: 2034

Hi - I just downloaded the beta version 5.34, and right off the bat, cannot get it to accept the lat/lon into my station information. I am using the latitude I got off of a GPS program, and it is: 38.132051 and longitude is: -96.130989 The program keeps telling me "bad latitude minutes value:missing value" What am I doing wrong? I also tried using the information on QRZ for my callsign, which is a little different from the GPS lat/lon since it is based on postal zip code, so not as accurate. Those numbers are: 38.136147 and -96.13424 Still didn't work

Thanks es 73 de KCØPTO/AG

Hi Mike,

One thing that I have noticed is that there are different right click menus in the packet window vs. the map window. Also, if you single click a call in the packet window, it appears in the QSOs+Check call window. That feature would be nice (or the choice in the right click menu) in the band map window.

One other thing; I am tracking grid fields for the CQ DX Field Award. This award allows maritime mobiles to count for grid fields (many do not have any land). When I run a Grids Worked/Confirmed for 2 digits. It does not show the MM stations worked or confirmed. Is there some way that this could be done? I new check box in the report parameters window for "allow /MM stations" or something like that would work.

Thanks again for a great program.

2037. New additions to XMLOG?

Yahoo group: XMLog
Date: 2007-03-05 04:31:53 UTC
From: Dennis Jacobson
Topic: 2037 Message: 2037

Hello Mike.

I don't know if your still writing new software for the XMLOG program or just writing repair fixes. If by chance your still interested in writing new compliments to XMLOG, I would suggest the possibility of having the lines of spots that match my filters show up on a second sizable window as part of the normal spotting net window. If not that, maybe just have the lines that match my filter be written to another file that I can look at off line.

Just a suggestion if you don't have anything else to do. hi hi
Thanks for an already invaluable piece of software.

Hi Dennis, Check out the Packet Spots History Window that can displayed using the "View" menu item. This window displays spots in a spreadsheet style and has some filters unique to the window. Check the help info for more details.

Mike - W1ECT

From: Michael McCarthy
Topic: 2040 Message: 2043

I am confused. XMLog calculates the offset for UTC
based on the timezone you have set in the OS and your
PC clock. If your PC is set to local time, the
timezone is set correctly and your Windows OS is up to
date with patches, then all should be OK. If you are
running an OLD unsupported OS like Windows 98, then
you have a problem. Look for a program called TZEDIT
on the WEB or on the Microsoft WEB site.

Windows 2000 is also considered "unsupported", and TZedit must be used
for that as well.

Additionally, after using TZedit.exe, you have to go into settings,
control panel, date/time, and choose any other time zone besides the one
you edited, then reselect the appropriate time zone for your location
and hit the apply button BEFORE the TZedit changes will take affect.

2048. Re: [XMLog] Re: Daylight Savings

Yahoo group: XMLog
Date: 2007-03-13 13:43:01 UTC
From: Robert Dixon
Topic: 2040 Message: 2048

I am still using the old Mlog version 496 because it lets me keep small logs that can be sent to LOTW and then spliced into the master log using ADIF files. Mlog is great for the contesting work that I do and it makes great labels for my homebrew QSL cards. Time and date stamping are a real timesaver. I have no need for rig control or the other peripherals that are give some of the users fits. I had no problem with the time change whatsoever using Windows XP. The point here? I think Mlog is a fantastic program for what I want to do and really appreciate the amount of time and energy it has saved me. Thanks again Mike!

2049. Re: Daylight Savings

Yahoo group: XMLog
Date: 2007-03-13 17:22:28 UTC
From: ad5uu
Topic: 2040 Message: 2049

I figured out what will work until the old time change occurs. I have set my computer clock up as Eastern time (5) instead of Central (6). With this XMlog uses a 5hr offset. When the old time change date roles around I can switch back to Centeral.
Yes I use UTC for logging. There may be an easier better answer but it's the only one I have for now, and I don't want to make a bunch of contest contacts and have to reset the times.

Thanks

2051. Re: How to get comments onto eQSL from XMLog

Yahoo group: XMLog
Date: 2007-03-18 04:56:40 UTC
From: kd5txl
Topic: 2033 Message: 2051

I create an ADIF file of the QSOs I plan to upload to eQSL - usually select by dates - then pull the ADIF file up in Notepad and select the REPLACE option under EDIT mode. Change the COMMENT word to QSLMSG and hit the REPLACE ALL button. This puts the XMLog comments / notes into the eQSL comments field. Works like a champ.

Thanks Mike: Mlog does what I want for DXing. I set up a file just before a contest and leaave Mlog on a second screen. Punch in a callsign and check for dupes instantly. Once the contest is over, dump an an ADIF file into LOTW and into the Master Mlog and the current log (in this case log 25) and I'm done. Print up a paper copy and I'm done. This is a fantastic logging program. With date and time stamping I can log 'em as fast as I can work 'em. Don't need N1MM loagger at all.

Subject: [XMLog] Re: Paper copy for log files

Hi Bob, You should be able to change your margins and font using
the "File/Print Setup" menu item. The current XMLog version at
www.xmlog.com/beta<http://www.xmlog.com/beta> has some changes that make this menu item perform
better on XP systems.

2058. Station data in XMlog

Yahoo group: XMLog
Date: 2007-03-21 00:34:20 UTC
From: Bill Turini
Topic: 2058 Message: 2058

I keep my .log files and backup files on a server in my house. That way I can run labels, reports, etc. from my main computer and use my laptop in my shack to log (not at the same time).

I had to rebuild my laptop HD and loaded a newer version of XMlog. It picked up the .log files when I entered the correct path, but I was kind of surprised to find that I had to re-enter all the station information. I would have thought this would be kept in the same location as the log files. Did I miss something in the setup? If not, what is the rational behind this?

From: Craig Bradley
Topic: 2002 Message: 2059

Hi Mike,

Is there some way to get the continent info into a report? I have checked the Excel options with no luck. It is 30 Qs as you do need NA, but not Antarctica. I know where most of the countries and islands are, but having the continent in a field would help. I could use a paper copy of the ARRL list and lay it along side. I also thought about exporting the log into Writelog and running a contest report, that should tell me.

Anyway, this is not a high priority, just a curiosity, I would rather have LoTW QSL importing. I have a ton of states confirmed there and have been too lazy to enter them all. I am up to date on the countries (manually) though.

The new right click menus in the packet windows are nice, Thanks!

Hi Craig, I currently don't have any plans to add WAC tracking. It could happen some day and the 'Prefixes' file does contain the continent info. Hey, 5-band WAC is only 25 (30?) QSOs, do a DXCC Checklist and sharpen your pencil!

From: Mike McAmis
Topic: 2058 Message: 2060

Hi Bill, I don't have much a rationale. All your options settings are saved in your install directory in various .ini files with mlog.ini containing the bulk of them (including your station info). When you install on additional systems a default mlog.ini file is created. To get the options settings from your other system the easiest thing to do is just copy your .ini files from your old system to your new system after the install is complete (and XMLog is not running).

There is actually an undocumented command line option that allows you to use an arbitrary 'mlog.ini' file:

C:\wherever\mlog.exe -ini X:\wherever-else\mlog.ini

So you could get away with one mlog.ini file if it was available on your network. I don't advise this though since XMLog wouldn't be happy if the network connection was down. There can also be problems if you run XMLog on both systems simultaneously sharing the same .ini file.

I use the -ini option so that I can have two different setups on one system (for testing mostly - one is set up for PacketCluster via a COM port and the other via the Internet). There is another command line option that lets you specify an alternate Packet History file. So my alternate XMLog icon has a command line of:

C:\mlog\mlog.exe -ini mlog1.ini -history mlog1.his

The default folder for the files on the command line is the XMLog install folder, if you have them somewhere else you'll have to include the full path name.

Sorry Craig, The continent info is not currently available. If you get stuck on some country as to which continent is belongs to you can open the "prefixes" file with WordPad (or whatever) and take a look (continents are designated by EU, AF, ...).

I'll add WAC award tracking to the to-do list but it won't be happening any time soon.

That's OK Mike. Many other features are higher priority. If you were going to do anything, I would suggest adding a field selection to the Display/Excel selection screen, then people could sort by it in Excel or what ever.

2065. Re: Change what goes into Notes field when importing ADIF.

Yahoo group: XMLog
Date: 2007-03-24 15:29:27 UTC
From: Mike McAmis
Topic: 2063 Message: 2065

Hi Joe, Originally only the ADIF "Comments" field was moved to the XMLog "Notes" field. Later some contest oriented fields were also moved to the "Notes" field preceded by "In:" and "Out:". When I added the "Test In/Out" fields I suppose I could have stopped copying some of the data to the Notes field but I kept the old strategy in place.

Here's the contest data that currently winds up in the Notes field:

"ContestName xxx" - xxx gets added to end of Notes field

"SRX xxx" and "SRX_STRING xxx" -> Notes as "In: xxx"
xxx is also copied to the "Test In" field.

"TRX xxx" and "TRX_STRING xxx" -> Notes as "Out: xxx"
xxx is also copied to the "Test Out" field.

"ARRL_SECT xxx" -> Notes as "In: xxx"

Since XMLog only has one frequency field any secondary frequency info is also moved to the Notes field.

"FREQ_RX freq" -> Notes as "Freq2: freq"

"FREQ freq1/freq2" -> Notes as "Freq2: freq2"
(the primary frequency freq1 -> Frequency field)

Hi Burton, Of course the desire to convert Excel to ADIF isn't something unique to XMLog users. I've done some web searching on this topic in the past and it seems that the route they take is to define some kind of script/formula for each Excel field that controls how the data gets saved to a text file. I've not pursued this any further myself but perhaps you can do some web searching and find some detailed help or maybe someone here can help you out.

Attached is an Excel spreadsheet file I created to
import my hand written logs into XMLog with.
It works great!

Enter your QSO info in fields A thru Q.
Highlight and COPY cell R thru AI.
Go to sheet2.
Select EDIT then PASTE SPECIAL. Select VALUSE then OK.
This will paste the values along with the ADIF field
format.

Now highlight and COPY cells A thru R. Next paste this
into notepad and save as a ADIF file. (test.adf)
This can then be imported into XMLog.

Hello Howard,
You are not saving the Excel file, you are saving the
notepad file that you paste to as an ADIF file.

When you exit Excel don't save the spreadsheet.

2072. Vista

Yahoo group: XMLog
Date: 2007-03-31 17:11:05 UTC
From: k9mrd
Topic: 2008 Message: 2072

I need to buy an additional PC, but all seem to have Vista loaded. Dell will sell an XP version, but they want 2X price of their cheap Vista machines.

I have read all the threads from February regarding Vista and wondered if anyone has had experience with a 'factory installed' Vista version as opposed to an XP updated version. My experience with older MS/OS updates is they have more bugs than new OS on new machines.

Any information on recent installs and new hardware/OS would be appreciated.

Thanks!

You'll need to make sure that any peripheral hardware you have has Vista drivers available.

I have my own reasons for not adopting Vista. MS is also going to take a very bad business hit quite shortly as well. The US Dept of Transportation has placed an indefinite ban on Vista from any computer within their organization and they've also banned IE 7 and Office 2007 as well. That's 15,000 computers right there. If one federal agency has gone this route there will be more to follow.

You can always use XP on the "new" computer. I'd buy an OEM version from NewEgg and load it up. OEM versions of XP are much cheaper than retail and you'll get everything but the MS support.

It's also never a good idea to jump on the new OS bandwagon until any major issues can be tackled.

From: N7MAL
Topic: 2008 Message: 2075

I have not heard/seen many, if any, positive comments about Vista. In the Ham-Radio world programs that have grown from the DOS days to XP do not work properly, if at all, in Vista. One of the 20 year long time 'goodies' GeoClock doesn't work well in Vista. There are comments at the GeoClock site. There is a driver problem that does not allow some CW keying programs to key external radios. In fact most, if not all, of the current drivers we use today will not work in Vista. I have not verified but have heard using the default address 127.0.0.1 to connect XMLOG, or other logging programs, to the VE7CC packet-cluster terminal software requires work-arounds. I personally have used 127.0.0.1 for years and it works perfectly in XP.
My personal impression is Microsoft is trying to reinvent the computer making the way we do things today obsolete, thereby making more 'bushel-baskets' of money for Microsoft.
I guess the old saying let the buyer beware applies to Vista.

Subject: [XMLog] Vista

I need to buy an additional PC, but all seem to have Vista loaded. Dell will sell an XP version, but they want 2X price of their cheap Vista machines.

I have read all the threads from February regarding Vista and wondered if anyone has had experience with a 'factory installed' Vista version as opposed to an XP updated version. My experience with older MS/OS updates is they have more bugs than new OS on new machines.

Any information on recent installs and new hardware/OS would be appreciated.

Thanks!

Wayne

Wayne/Group,

In my considered opinion it is best to avoid Vista for now if you are using the PC for radio activities. There are driver issues (lack of them being the primary one), as well as reported application compatibility and performance issues.

2078. bug report: bureau card function

Yahoo group: XMLog
Date: 2007-04-01 23:28:47 UTC
From: Steve Woodruff
Topic: 2078 Message: 2078

Hi,

Using the latest 5.35 xmlog.... when using Ctrl-B / bureau card function, the QSL recv date is set correctly, but if the QSL sent date was previously set, it is changed to the current date. This behavior is not matching what the manual says should occur.

tnx

Steve N9OH

From: Mike McAmis
Topic: 2078 Message: 2079

Hi Steve, I checked back to see if this was something that had changed recently and it turns out that this is the way it has been working since at least 1997 (this is the oldest Windows version I have archived).

I guess my thinking was that if you are "handling" an incoming bureau card this means you have just received a card and you sre filling out yours in response - both dates would be set to today.

The comment in the help file about not replacing existing values should be removed.

2081. How to add N8S to KH8/S?

Yahoo group: XMLog
Date: 2007-04-04 16:07:09 UTC
From: Craig Bradley
Topic: 2078 Message: 2081

Hi Mike,

I am trying to add N8S to my prefix file, but no luck so far. I have changed the line to:

KH8/S,Swain's I.,OC,32,[-14/172],ADIF=515.N8S,!,

It still shows up as W-USA.

Any ideas?

73,

Try right clicking on the XMLog button on the task bar at the bottom of your Windows desktop. With XP you will get a menu with Cascade, Tile, etc. one of those should get you out of trouble.

2090. World Map?

Yahoo group: XMLog
Date: 2007-04-09 09:27:46 UTC
From: ei4hq
Topic: 2090 Message: 2090

Hi All,

The Help Doc refers to a "World Map" accessible via the View menu (not the packet spots map) I don't ever recall seeing it in any version of XMLog I've used - currently running v5.28. Perhaps it was discontinued some time ago?

Is there a mapping tool (for displaying DX spot locations & path to home QTH) that integrates in some way with XMLog?

2092. Installing v5.35 over v5.28

Yahoo group: XMLog
Date: 2007-04-09 16:21:11 UTC
From: Kenneth Moorman
Topic: 2092 Message: 2092

I presently am using v5.28 of XMLog and have enjoyed using it. I would like to upgrade to 5.35 so as to not fall behind on anything, but as I have never upgraded since getting 5.28, and I don't want to ruin any of what I now have and enjoy, I want to be sure about what I need to do. Will v5.35 install over top of v5.28, and will I have to re-enter any of my station info that is now there? I would expect to at least do a backup just before re-installing the new version, and maybe save the latest ADIF file as well.

Any help will be appreciated.

Hi Ken,

You can install over 5.28. I would make a new subdirectory under MLOG called v528 and copy all files into it to be safe. Then download and install 5.35. I have done many upgrades and never had a problem with loss of features, etc.

Have fun (you don't need good luck for this)!

2094. Previous Contacts

Yahoo group: XMLog
Date: 2007-04-11 13:25:21 UTC
From: wb5jjj
Topic: 2094 Message: 2094

Mike: Would it be possible to put below the "Freq" and "RST In" blocks a previous contact block and date block of last contact with his OM if there was one? I know this is available via other shortcut keys or menus, but something on-screen would be a nice touch. This information need not be stored with the record, of course, just instance reference. Somemtimes, there are just too many windows already open if other programs are running as well. The screen can become very cluttered, very quickly.

2095. Frequency Searches

Yahoo group: XMLog
Date: 2007-04-11 13:21:26 UTC
From: wb5jjj
Topic: 2095 Message: 2095

I have noticed that mlog limits the upper frequency searches to 30Mhz. Frequenly I would like to search for a specific frequency or group of frequencies instead of the entire band (ie 6M, 2M, ect). Seems like an easy change to an old programmer myself.

2102. Multi-contact QSLs

Yahoo group: XMLog
Date: 2007-04-13 17:04:31 UTC
From: k9mrd
Topic: 2102 Message: 2102

When using 'Add QSL Labels for all selected entries', how do I omit a QSO. (I am printing a single QSL to confirm several contacts.)

A recent example is N8S where I have 5 bands with both CW and SSB contacts. I did not think I was in their log for 20 CW so I worked them again and after a couple of days both CW contacts appeared in their log. So now XMLog shows 11 QSO's but I really only want to confirm 10 of them.

Is there an 'Omit' function somewhere?

2110. Re: Multi-contact QSLs

Yahoo group: XMLog
Date: 2007-04-15 01:47:28 UTC
From: k9mrd
Topic: 2102 Message: 2110

Hi Craig,
I thought I tried selecting the desired QSOs in the past, but they did not all print on my custom 4 contact card. They printed one per card. Guess I will try that again. I am using version 5.28. Are you using a more recent version?
Thanks.
Wayne

From: Craig Bradley
Topic: 2102 Message: 2111

Hi Wayne,

I have 5.35 but this works on the older versions too.

Select the QSL-4 label format first, then find the QSOs and under the Labels menu, select Add QSL label to list. All of the Qs for the same call should go on the same label (up to 4).

73,

- Craig, AE6RR

Topic: 2104 Message: 2114

You can select QSOs many ways. You can select a range by date. Click the Select button and put =>4/1/07 in the date field and you will get all of the QSOs from April 1 on. Look in the help file for more information on searching.

I usually use the Critical QSOs feature in the Awards menus to select the QSOs that I need to QSL. Then I scroll trough them and add them to the QSL label list with the addresses. Then I print a sheet of labels and put them on the cards and envelopes.

I hope this helps.

Hi Gerry

Thanks for the help. the only problem I am having with LAT/LONG is
placing the minus sign in front of the Long. e.g. My longitude is -
122 61 37 W

Have a great day,
Steve

From: k9mrd
Topic: 2125 Message: 2125

Hi All,

I use a color photo printer for QSL's and a laser for all other printing. Is there a way to set the photo printer as the default printer within XMLog's custom QSL card printing functions? To make it work now, I have to change the default printer within windows before starting a batch. I have forgotten to change the default a couple of times and sent a batch to the wrong printer!!

Thanks for any help.

Wayne

PS - I purchased the HP A616 Photosmart printer for my QSL's and it really works great! (prior post)

I believe that XMLog uses the standard Windows default printer. You will have to go into File/Printer Setup to change it if you want to use another printer.

2127. Test In / Test Out Fields

Yahoo group: XMLog
Date: 2007-05-01 04:42:40 UTC
From: kd5txl
Topic: 2127 Message: 2127

Nice to have these fields available, but I find them difficult to use when contesting. These fields need to be where the RST fields are so there's no need for multiple tabs to reach them. It would really be helpful if the Test Out field could be set with default values for contesting.

Great program. I have yet to find one better!

Thanks, Gene.

From: Howard Baker
Topic: 2129 Message: 2129

I just noticed a very UNimportant bug in the Spots History window.
You must have 3 or more spots in the window to be able to clear them.
If there is one or two they will not clear. I like to get rid of the
old ones so I don't have to look at the times or dates. It really
does not need to be fixed. I just deal with it.

Thank you very much. I am sure not as computer literate as I should be probably to do this. I checked the price of the level converter and saw a price of 139 without cable. Then I would have to go through the learning process of how to use it. Not sure I am ready to try this. It certainly is nice of you to tell me I needed something I didn't have. I didn't see that in the explanation of the log. I also don't know if my computer has an RS-232C port but this is something my son will know.

Again thanks very much for heading me in the right direction and letting me realize there was more to it than just downloading the software.

It works Time owned: 0 to 3 months
I'm using the cable to interface my IC-718 with the computer. I plugged it in, adjusted HRD to bring up DSR/RTS, and it works. Only "negative" is that there are no "instructions", but if you are using the cable, you should already know enough to "plug it in".

W4VD <http://www.eham.net/user/profile/W4VD> Rating: 5/5 Mar 4, 2007 00:21 Send this review to <http://www.eham.net/reviews/mailto/56639> a friend
Great little cable Time owned: 0 to 3 months
When I recently pruchased an Icom 756, I thought that my only option for a PC connection was the CT-17 box, at well over 100 bucks used, I wasn't looking forward to that, but while looking for the best deal on a CT-17 I ran across this cable for only 30 bucks new! I got one and it works great and now I have a PC connection to the 756 for my logging programs (winlog 32 and N1MM) I have since informed a couple of other hams about this cable, seems the dealers don't push this one very hard, I guess because there is a lot better markup on the CT-17, but if you have only one rig to connect, this is the way to you, highly recommended,

2135. RE: [XMLog] xmlog

Yahoo group: XMLog
Date: 2007-05-11 15:04:47 UTC
From: Craig Bradley
Topic: 456 Message: 2135

There are several companies that make rig control adaptors. They should work with XMLog. If you don't have a serial port (9-pin D) on your computer, here is a link to a USB interface that should work OK. The Icom version is $56.95.

http://www.westmountainradio.com/RIGtalk.htm

http://www.westmountainradio.com/order_us48a.htm

I don't have any experience with these as I don't have an Icom. I have used a microHAM microKEYER USB interface with XMLog and my Kenwood TS-2000 and TS-480 with good results.

Good luck & 73,

- Craig, AE6RR

It works Time owned: 0 to 3 months
I'm using the cable to interface my IC-718 with the computer. I plugged it
in, adjusted HRD to bring up DSR/RTS, and it works. Only "negative" is that
there are no "instructions", but if you are using the cable, you should
already know enough to "plug it in".

Great little cable Time owned: 0 to 3 months
When I recently pruchased an Icom 756, I thought that my only option for a
PC connection was the CT-17 box, at well over 100 bucks used, I wasn't
looking forward to that, but while looking for the best deal on a CT-17 I
ran across this cable for only 30 bucks new! I got one and it works great
and now I have a PC connection to the 756 for my logging programs (winlog 32
and N1MM) I have since informed a couple of other hams about this cable,
seems the dealers don't push this one very hard, I guess because there is a
lot better markup on the CT-17, but if you have only one rig to connect,
this is the way to you, highly recommended,

Yahoo group: XMLog
Date: 2007-05-11 19:49:59 UTC
From: David Spoelstra
Topic: 2136 Message: 2136

Bob-

Do *NOT* spend $139 for the Icom level converter. There are many less expensive alternatives out there. My club uses 9 Icoms with XMLOG and we use:
http://k1nu.home.comcast.net/k1nu/Products/control.html which costs $32.

Here's some others in the $30 range:
http://home.att.net/~n8st/rigcontrol.html
http://www.hosenose.com/interfaces.asp

If you need a USB interface, then buy a serial to USB cable for $10 and use one of the above cables or buy the combined USB with rig control for about $70 from:
http://www.cssincorp.com/prod-cable.htm
http://www.westmountainradio.com/RIGtalk.htm

If you are good at building things, build one for just a few dollars:
http://www.qsl.net/g3vgr/civ.html (this is the one I built and currently use)
http://www.plicht.de/ekki/civ/civ-p2.html
http://stevenet.freehosting.net/icom/

2138. Terminating of #repeat

Yahoo group: XMLog
Date: 2007-05-12 20:25:00 UTC
From: GerryC
Topic: 2138 Message: 2138

When I'm sending a canned CW string that includes #pause n #repeat, F12 will terminate the sending only if pressed DURING SENDING-- pressing it during the pause has no effect. (Sending starts again when the pause expires.) How can I terminate it during the pause?

(e.g., If I'm sending a canned CQ, and if during the pause someone comes back to me, I don't want to automatically send anything more.)

2147. Rig control: Appropriate Mode for a Given Frequency

Yahoo group: XMLog
Date: 2007-06-02 06:08:19 UTC
From: ei4hq
Topic: 2147 Message: 2147

Hi All,

I'm a long term (very happy) XMLog user. One thing I've never figured out however is how to change the mode that XMLog associates with a particular frequency i.e. when I double click on a spot, say 7.050MHz, I expect the rig to (a) switch to that frequency (which it does), and (b) change to LSB (which it doesn't).

This isn't a rig issue or anything, I've the same behaviour with Kenwood and Yaesu rigs, and mode changes are 100% in other contexts using XMLog.

The issue here is bandplans methinks - by default XMLog is set up for USA bandplans? 7.050 is still CW territory over there if I'm not mistaken?

Is there a file that contains bandplan information somewhere that I can edit? I've had a rummage around but can't find anything obvious...

Or am I totally off the wall here, in which case please feel free to correct me!

Regards
Cormac, EI4HQ

Currently all the Serbian and Montenegro stations appear to be still using their old YU6 etc prefixes. Last week in WPX (just after the change was announced) there were loads of YZ and 4N stations on from Serbia. I think it will be some time until licences are reissued with the new calls and until that time both prefixes will continue to be used. Perhaps a little hasty to modify the prefix lists yet...

OK Dave, I've posted a new version of XMLog at www.xmlog.com/beta which restores the YT3/YT6/YU3/YU6/YZ3/YZ6/4N3/4N6 prefixes for Montenegro and the other YZ/4N prefixes for Serbia. I will keep things this way until current stations have new calls assigned.

The "main" prefix for Montenegro will still be 4O.

2155. QSL Source Field

Yahoo group: XMLog
Date: 2007-06-18 19:52:42 UTC
From: k9mrd
Topic: 2155 Message: 2155

Mike,

It would really be nice to know if a QSL was paper, LOTW, or eQSL.
(Actually I don't track eQSLs, but many do.)

Since CQ does not recognize LOTW and eQSLs, and ARRL does not recognize
eQSLs, XMLog tracking for DXCC and WAZ is not accurate.

Is there a work around or should I dump all of my records into a
spreadsheet and do the tracking outside of XMLog? Gosh, I hope not!!

A QSL SOURCE field that could be tied to Awards Tracking would be great!

Wayne

From: Craig Bradley
Topic: 2155 Message: 2156

Hi Mike,

I agree, I have been putting the date in the QSL Received field when I received a paper QSL and putting a question mark in and a note "conf LoTW" at the end of the Notes field when it is LoTW.

However, I just tried to do an analysis this weekend of the stations worked and confirmed by date. My scheme didn't work very well. I was able to filter data by putting "mm/dd/yy;?" in the QSL received field and the "mm/dd/yy" in the QSO date field, but I do not have the true received date.

Any progress on the LoTW download project yet? That would be the best solution. Also with WAS now supported, I have way too many QSLs on LoTW to manually enter. Maybe a second date field for the LoTW QSL would be best as sometimes I get both paper and LoTW confirmations. If you download a LoTW report, you don't want to wipe out the paper QSL dates.

Wayne,

CQ will recognize LoTW confirmations for CQ DX Award and CQ DX Field Award. I submitted print outs of LoTW QSL records for my Field Award and they took a printout of my DXCC record for the DX Award. They also allowed a DXCC card checker to check my cards as there is no CQ card checker in my area. I don't know about WAZ awards though. It might be good to ask them.

73,

Hi Wayne,

There is an article on the LoTW web site http://www.arrl.org/lotw/silver.pdf that talks about the CQ DX, CQ DX Field Award and IOTA as future awards to be supported. It does not mention WAZ though. This may be the same article.

I did personally use LoTW QSLs for CQ DX and CQ DX Field though.

Craig,

I talked to CQ today and was told LOTW contacts can't be used for WAZ awards....however, CQ is having discussions with ARRL and they may be accepted in the future..... (No time frame given.)

As I recall, there was a vague ref to using LOTW for other awards in QST a few months ago.

Hi Chuck,

Look in the Xmlog help[files and you will find instructions to conduct various search functions. You can then specify parameters for the entries you want. For example, you could tell XM to find all entries after January 1, 2007 and anything from that date to now would be highlighted. You can then save those entries into an ADF file which can be uploaded to LOTW. It works very well for me.

Good luck and very 73.

Kevin :)

Re: ADIF Help

Hi Mal, I don't have a good way to isolate the last 25 QSOs but here's a way that will work. Select all records and go to the last record, make a note of the QSO number. Now do your arithmetic to get the number of the "first QSO of the last 25", i.e. last-24. Now scroll back to that QSO (the mouse wheel is nice for this). Make a note of the date. Now you can do a search for date >= than this QSO.

This might not result in 25 QSOs if this wasn't the first QSO you made on that date! You'd then have to edit the ADIF file to delete those first QSOs... What a mess eh?

Well I hope this isn't something you'll need to do very often - I've never been in a situation where I've needed to do selections by QSO number.

Yahoo group: XMLog
Date: 2007-06-25 05:35:34 UTC
From: Craig Bradley
Topic: 2162 Message: 2165

My method is to search for the files by clicking Select and then putting something like >=5/27/07 in the date field if 5/27/07 is the last time that I submitted files to LoTW. Then do Import/Export ADIF File, select "Currently selected log entries" and save the file with a filename like AE6RR_20070624.adi in the mlog directory. Then the next time that I want to upload, I can look at the file names to see the date of the last upload. This works well for me.

I hope this helps.

2171. Problem with DXCC Worked/Confirm Function

Yahoo group: XMLog
Date: 2007-07-11 20:38:20 UTC
From: Kenneth Moorman
Topic: 2171 Message: 2171

I am having a problem trying to obtain valid information using the "Awards"--"DXCC"--"Worked/Confirm" function of XMLog. I would like to determine, for instance, all the phone QSOs I've logged on 80 meters. What I have been trying to do is to first use the above function to create a list of all phone QSOs using all log entries, and resetting the current records to those in the report, and display the data in Excel. Then I return to the same function again, except that I ask it to look only in the currently selected log entries (the phone QSOs), and give me all the QSOs on 80 meters, and put the results into Excel, but not to reset the current records to those in the report. This gives me a very reasonable looking printout in Excel. Then I tried to get the same results by first using the above approach by getting all the 80 meter contacts, then from that set of QSOs, getting all the phone contacts. The second results do not match the first. In my case I had Confirmed = 3, Worked = 9, Out = 2 in the first case, and Confirmed = 3, Worked = 10, and Out = 2 in the 2nd case. To make matters worse, while 2 of the confirmed were the same in both cases, there were different QSOs listed for the third confirmed QSO, and a Worked # 1 added to the 2nd case that had not been found by the first case. Between the two cases, all of the "Confirmed" QSOs are valid, so I should be seeing 4 "Confirmed".

This is very confusing to me, and I feel that I am just missing some obvious flaw in what I am trying to do. If anyone can make any sense of this, I would be grateful.

Thanks and 73,

Ken, NU4I

Hi Ken, Not sure what's going on based on your description - I may have to get a copy of your log and duplicate things here.

One thing though, you don't need to use the "DXCC Worked/Confirmed" menu item to select the 80m Phone QSOs. Just do a log search using 80m as the frequency and Phone as the mode. Then you can use any Awards or Display menu item and use the "Currently Selected" log entries.

Topic: 2171 Message: 2173

Thanks for the ideas, Mike. I think I have been trying to do something with the Worked/Confirm part of the program that it wasn't intended to do. I see that I can get the accurate results I needed by filtering to a selected list of "whatevers", then using Worked/Confirm to print out the exact info I needed. I did all this manually, but will use this method to check how well I did. I was trying to assemble the list for my first application to DXCC this coming Tuesday, and between paper QSLs and LOTW, I am going to get several over the needed 100 to qualify. In future, I will use your suggested method! BTW, is there any way to flag LOTW confirmations and "score" them along with the actual paper QSLs?

Thanks for making this really nice, useful, easy-to-use (when you do it correctly!) program available to the amateur radio community. I can't imagine going back to the paper logbooks, even though I have a brand-new one in my desk right now. Guess it will end up as an antique relic someday.

73,

Ken, NU4I

That looks like a conflict with the serial port. Some other program must have the port open or you do not have an operational COM 4 port. Look in the device manager to check the port. Right click My Computer, click Properties, click the Hardware tab and click Device Manager. Under Ports (COM & LPT) you should see COM4 if you have one.

If the port is OK, then another program may have it open. If so, try a re-boot or another port.

Good luck & 73,

- Craig, AE6RR

Craig,

Tnx for reply.

Error report

Can't access rig port
Port = 4
Baud = 4800
Parity = E

Company = Kenwood Model =
Where = Set 'port open'
(8002) Invalid Port Number

When I change model to TS570 and TS2000 I get a similar report.

Craig,

Tnx for the info. the com port situation is resolved. However, now
get a no response from rig report.
a. The rig is on.
b. Cable seems to be snug.
c. Went into device driver for specs on the com port. Made parameter
4800 on port, rig, and software.
d. Get same response from all Kenwood rigs.
I'm sure we're pretty close. Would appreciate additional help.

Tnx agn,
Evan
P.S. didn't have to go thru all of this when I was using TS-140.

Hi Kevin,

What was the problem with the comm port? This info may be of help to others that have similar problems.

You need to be sure that the radio and the comm port are set the same. To set the computer comm port speed you need to make the settings in XMLog, not the Windows device driver. In the Options menu of XMLog go to HF Rig Port Select and set the following:

Set defaults for: TS-2000 (I also have a TS-2000 and these settings work with both the 480 and 2000)

Comm Port: set as appropriate

Baud Rate: set to desired rate (I use 19200, but you may want to start out slower)

Flow Control: None

Parity: None

Data Mode: Data/FSK

Options: check RTS Always On

Click Save

On the TS-480, go to menu 56 and select the same baud rate as above.

Finally, be sure that you are using a one to one serial cable, not a null modem or crossover cable. If you still have trouble, maybe you have a bad comm port. I have a little LED box that is great for resolving these problems. Most computer stores sell them. Also, you could try an inexpensive USB to serial converter. I use one with my laptop as it does not have a serial port.

Hopefully, this will get you going.

73,

From: Charlie Wilber
Topic: 2179 Message: 2184

Hi, folks. Regarding the message below and the thread to which it belongs, I recently started trying to use my TS-2000 with XMLog and also had some comm port problems. I finally figured out that the problems were occurring because my computer does not have a legitimate serial port built in to it so I had to use a USB-to-serial adapter. What seemed to be causing the problem was that the radio did not always grab the same (virtual) comm port. Sometimes it would grab Com8; other times Com7. I'm not sure why that happened but it did. Perhaps I was using other applications in between sessions of XMLog that also used comm ports and that messed things up.

Once I figured that out and just made sure (by trial and error) that XMLog was looking at the right comm port, I had no more problems. In all cases when things were working, though, the settings were 9600 baud, 8 data bits, 1 stop bit, no parity, no flow control and Data Mode of "LSB or USB." I am using XMlog version 5.19. Hope this helps.

73,
Charlie

Most programs that try to use the parallel port don't work on XP (most don't work on Win2K either). The operating system doesn't allow application to access the port.

I use a microHAM microKEYER that has the K1EL WinKey chip in it. It plugs into a USB port and works great with XMLog. It also does rig control, RTTY FSK keying, sound card interface and PTT. No serial ports required. It hooks up to the back of the radio, so you don't have cables to connect to the headphone jack and microphone jack for PSK and RTTY operation.

Hi Cliff

Assuming you're new to XMLog, this might be your problem--

It only displays (overtly) selected entries. The "black hole" is probably the UNselected entries.

Try this to select all your entries--
--click the SELECT button
--a SEARCH button appears. Click it without filling in any fields.

Additionally, to add a contact click Edit and select Add New Entry, then
fill in the data and click Add at the bottom. The Qs are automatically
saved to disk, you do not need to save the file.

Also, check out the Help files, that is your manual.

Have fun & 73,

I created a log, input a contact, but have not yet seen how to save it and other contacts and recover what was saved with XMLog. It just disappears into a black hole. ... Any suggestions?

Hi Cliff

Assuming you're new to XMLog, this might be your problem--

It only displays (overtly) selected entries. The "black hole" is probably the UNselected entries.

Try this to select all your entries--
--click the SELECT button
--a SEARCH button appears. Click it without filling in any fields.

I'll also have a Vonage (Internet connected) phone with a San Antonio phone number & will likely use Skype, too. This kind of technology is really neat, but it will be nice when good h.f. radio propagation is back - I still like the 'magic' of radio!

2201. PSK listing

Yahoo group: XMLog
Date: 2007-08-24 05:00:34 UTC
From: Dennis Jacobson
Topic: 2201 Message: 2201

Hello again Mike.

Still love the program.
Thought I would ask if anyone else has requested PSK be added
to the "Phone CW RTTY" list. I do quite a bit of PSK work
and would like to track that on my listings. If there have
been other requests just add my call to the list.
If I'm the only one then it certainly isn't worth the effort.

Thanks Mike

From: Craig Bradley
Topic: 2201 Message: 2202

I was also thinking about this the other day as all of my PSK contacts show up under RTTY.

One other item that would be nice: When XMLog logs a RTTY contact, it reads the mode from the rig (Kenwood) and logs it as FSK. When I export to LoTW, LoTW does not except FSK and declares an error. I would be nice to have (maybe an option) for XMLog to log these Qs as RTTY or change them during the export so I don't have to manually edit them.

I just looked at the DXCC rules and I am not sure that PSK contacts count for RTTY.

d) RTTY: Contacts must be made using radioteletype since November 15, 1945. (Baudot, ASCII, AMTOR and packet count as RTTY.) Confirmations for cross-mode contacts for this award must be dated September 30, 1981, or earlier.

I guess the actual entry should be PSK31 since that is what
LOTW accepts. I'm afraid we'd have to find some way to convert
PSK to PSK31 when sending to LOTW.

I think it can get complicated.
Just what Mike wants these days hi hi..

2205. Call Book Lookup stopped working?

Yahoo group: XMLog
Date: 2007-08-27 04:07:11 UTC
From: Puck
Topic: 2205 Message: 2205

I have version 5.38. I've selected QRZ.com as my call book. Just tonight when I try to lookup a station I get the message "not found in call book" for every station I try. Any suggestions on what may be wrong? This has always worked until tonight. QRZ.COM is not down. I can go directly to it and all is well.

From: ad5uu
Topic: 2201 Message: 2208

I would have to vote not to do that. My reasoning is PSK31 is a subset of RTTY, just like USB is a subset of phone. If you wanted to run a DXCC report only on PSK31 then put that filter in your search, run the report using the filtered contacts.

XMLog already logs PSK contacts as PSK31, if you log just like XMlog has it, LOTW will accept it and log it as PSK31 not PSK.

Good luck

I would suspect something in the path to the Internet. You might check with your ISP and see if they added any "new features" recently. Can you access QRZ.com OK using your browser?

Mike,

Could it be response times? How long does XMLog wait for the data before it declares an error?

Topic: 2205 Message: 2214

OK,

Now mine has stopped working too. I checked it earlier before my posting and it was OK. I haven't changed anything on the computer (no restarts etc.) and XMLog has been running continuously.

When I bring up QRZ.com in a browser window, it seams to take a long time to load. Maybe there is a problem with their server or response times.

Hopefully, this will clear up soon.

I would suspect something in the path to the Internet. You might check with your ISP and see if they added any "new features" recently. Can you access QRZ.com OK using your browser?

Mike,

Could it be response times? How long does XMLog wait for the data before it declares an error?

It's very strange that your QRZ.com interface works and a number of us have problems that seemed to appear just a couple of days ago. I have no problem connecting to the DX cluster from XMLOG but the call book feature no longer works. I tried reinstalling the program and that did not help.

We, I am sure, are all different in the way/ways we connect. There would be little very we would all have in common except the software(xmlog). Additionally the look-up feature in other software works perfectly.

OK,

Now mine has stopped working too. I checked it earlier before my posting
and it was OK. I haven't changed anything on the computer (no restarts
etc.) and XMLog has been running continuously.

When I bring up QRZ.com in a browser window, it seams to take a long time
to
load. Maybe there is a problem with their server or response times.

Hopefully, this will clear up soon.

From: D.W. Jones
Topic: 2205 Message: 2217

I connect XMLOG to the cluster via the VE7CC AR-User program. If I click on a callsign in
the AR-User program it quickly brings up QRZ.COM and the info for that callsign in a browser
window. If I then try the same thing with XMLOG, I get the "Callsign not found" message.

If I access my favorite cluster node directly with XMLOG (not using AR-USER) I also get the
"Callsign not found" message. This all started within the past week I think.

I am using XMLOG 5.31

I sometimes get the "Callsign not found" message but if I click OK the
sign appears correctly. I would guess that it has something to do with
QRZ's amount of traffic.

Hi everyone, long time lurker here.

Perhaps the following will lead you to the right path for solving the QRZ.com problem.

From dxlab yahoo group:

QRZ.com is an advertiser-supported site, meaning that its proprietor receives payment for the ads that appear with search results. In arranging for DXLab applications to extract callbook information from QRZ.com, I preserved the display of these advertisements by using Pathfinder as the access mechanism; this maintains the revenue stream for the QRZ.com proprietor.

There are logging applications that extract callbook information from QRZ.com without displaying the ads. The proprietor of QRZ.com is understandably displeased with this sitation. Today's format change in QRZ.com might be his first shot across the bow, or it might be entirely unrelated. If desired, the QRZ.com web site could be further modified to make information extraction much more difficult, for example by displaying it as an image rather than as text (as it currently displays email addresses).

Hopefully, this situation will be amicably resolved. However, there is no guarantee that DXLab will continue in its ability to utilize QRZ.com as a callbook.

73,

Dave, AA6YQ

All the best
Tony

Thanks Mike, hope you can get it fixed. My paper logs are starting to
stack up, hi.

I wonder if anyone could help me fix an error I made in my logs. I put
all of my fists, skcc and naqcc club numbers in the address 4 field
and I want to copy them to the comments field.

I'm not seeing an easy way. Thought about writing a program to sort
the log and copy address 4 to the comments field, looping through on
record at a time. Seems like there aught to be an easier way.

Is there a better field to use for club numbers than comments?

Thanks, Bill NT9K..

I have also installed the 5.40 beta and the QRZ.com interface appears to be good now.

The installation program did note that one file in the install was older than the one on my system (I kept the newer one). Unfortunately, I didn't make a note of which file it was (I think that it was a system dll).

Thanks Mike!

2230. Re: PSK listing

Yahoo group: XMLog
Date: 2007-09-03 17:04:39 UTC
From: Dennis Jacobson
Topic: 2201 Message: 2230

Hello again.

The problem I have with PSK31 being a subset of RTTY is that
when I have worked KL7 on RTTY and a spot comes up for KL7
on PSK31, there is no way for me to tell by looking and not
having to do some sorting etc. that I still needed KL7 on PSK31.
The hash mark will be on RTTY for KL7 but it still leaves me
guessing as far as PSK31 is concerned.

Maybe there is a way to tell in a quick fashion but I don't know
how to do it. If anyone has a suggestion on how they do it,
I would appreciate knowing.

As an adjunct to this problem. The thought crossed my mind
that maybe there is a way to put in the Packet options
what modes you want listed. In other words, put check marks
in the boxes for the modes you want to track and those
would show up on the line and indicate whether or not you
have worked the prefix in whatever mode/s you want.

Nothing difficult writing a software program for the guy that
doesn't have to do it. Huh Mike.... Hi Hi.

I certainly can live with the way it works now of course or I
wouldn't be such a fan of XMLOG. So if it stays the same, I'll
still be a very happy logger.

From: Mike McAmis
Topic: 2201 Message: 2231

Hi Dennis, XMLog's point of view is controlled by the requirments for DXCC award tracking so that's why it lumps RTTY, PSK, etc. into a single data category. One thing that might be useful would be to select all PSK QSOs in your log, use the "Awards/DXCC Checklist" menu item with the "Currently selected log entries" option and print the results. This isn't really a very hi-tech solution but would give you a quick way to check your PSK status for countries/bands/modes.

The same strategy would apply for the WAS Checklist, County Checklist, etc.

2233. RE: [XMLog] Re: PSK listing

Yahoo group: XMLog
Date: 2007-09-06 05:18:59 UTC
From: Craig Bradley
Topic: 2201 Message: 2233

Mike,

This is from an earlier posting:

I just looked at the DXCC rules and I am not sure that PSK contacts count
for RTTY.

DXCC Rules:

d) RTTY: Contacts must be made using radioteletype since November 15, 1945.
(Baudot, ASCII, AMTOR and packet count as RTTY.) Confirmations for
cross-mode contacts for this award must be dated September 30, 1981, or
earlier.

Is PSK considered packet? Does anyone know if the ARRL accepts PSK for the
RTTY award? I have not done a RTTY submission, but I have been counting the
PSK Qs as RTTY as XMLog counts them.

Here's a note from the DXCC FAQ at ARRL.ORG

Q: There are other modes not recognized by DXCC. How do they apply?

A: Modes such as PSK-31, G-Tor, Pactor, JT44 etc are digital and count
for DXCC as RTTY. SSTV and other voice modes count as Phone for DXCC.

Topic: 2238 Message: 2240

Wayne,

My problem is not with QRZ. It works fine with the Beta version. My problem is that my previous setups such as station info and my qsl label setups do not show up with the Beta version. When I try to use the Beta it asks for my station info when the programs starts and additionally the only qsl label arrangements are the ones that download, not my earlier version ones. I have used many earlier versions of XMLog and don't recall having had missing setups when I went to newer versions. I need to know how to put my earlier setups into the Beta version. Probably if I could tell what those files are labelled I could just replace the Beta ones with my own earlier versions. I have to be doing something wrong at this time.

Sorry Nelson, I read too fast and missed your problem.

Did you install over the top of the old version. That is the way I always do it and have not had a problem with my custom QSL layout, etc. I just installed the beta about a week ago.

Try copying your backup (old working version) into a new folder, download the beta version again since the one you recently downloaded may be corrupt, and then install the beta into this new backup folder.

Hope this helps.

Struck out again. I tried again and opened 5.40 into 5.35 and it opened by asking me for my station info. Until I can figure this out I'll just run 5.35 with my original setups and look up the QRZ info by going directly to their web site. I must be overlooking something that needs to be done in the installation but I sure can't figure it out. Thanks anyway, Wayne.

From: Mike McAmis
Topic: 2238 Message: 2243

Hi Nelson, Are you sure you installed it in the same location you used for the original install? By default XMLog gets installed in C:\mlog but some folk like to override this value with C:\Program Files\XMLog or whatever. Most of the options settings are kept in a file named mlog.ini so try searching your system for this file and see if you can find it in a place different than you used for your latest install.

If so you have two choices, re-install the latest version in this old location or copy the various .ini files from the old location to the new one (and also copy layouts.mdb which contains any custom label layouts).

2255. moving entry

Yahoo group: XMLog
Date: 2007-09-24 16:40:49 UTC
From: pa4doc
Topic: 2255 Message: 2255

Hello all,

My name is Wilko PA3BWK lis since 1981.
I should have signed up for this group years ago but never
did it........
I use XM-Log for about 6-7 years or so.
Sometimes I install those fancy programmes like Ham Radio Deluxe and
after playing a bit I see the strenght of XM-LOG, good job Michael!!

After years of neglect I am checking all my cards too see what my actual
worked/confirmed status is.
During this sorting I discovered that I had worked a new one in the
past, at least, that's what I thought.

Opening the entry I saw written in the comments that the qso has been
made from my holiday location in another country.............
So now I have to move these qso's to another log.

Question: should there be an option 'move entry to another log'???

Am I alone in this?, and secondly.....Michael??? is that possible.

Best 73,

Wilko PA3BWK

Hi Wilko, There isn't any direct way to move entries between logs. The easiest way would be to:

1) Open the first log and select the record(s) you want to move
2) Write them to an ADIF file using the Import/Export menu item
3) Open the other log and import the ADIF file
4) Verify that the records have been imported correctly
5) Open your first log, re-select the record(s) and delete it (them)

It's probably a good idea to back up both logs before beginning this operation.

>Question: should there be an option 'move entry to another log'???

You could output it to an ADIF file, open the other log, and import the ADIF file.

I believe the standard way to look up a call is left double click. It saves an extra click.

2262. moving a field

Yahoo group: XMLog
Date: 2007-09-30 10:05:40 UTC
From: Bill
Topic: 2262 Message: 2262

Is there a preferred field to use to store club numbers?

I fouled up bad and stored mine in the address 4 field. Now I can't figure out how to move them to another field. I was thinking of using the comments field, but some records would have data in both the address 4 and comments field.

Is there anyway short of modifying each record to fix this? I considered writing a program to loop through the adif file, but hope someone might suggest an easier way.

Thanks, Bill NT9K..

2264. split on FT-2000

Yahoo group: XMLog
Date: 2007-10-02 09:02:26 UTC
From: pa4doc
Topic: 2264 Message: 2264

Hello all,

I don't know if there are a few FT-2000 users around.
I find it irritating that during operating in split mode my second VFO
does not move during band changes.

So, if I worked a DX station on 15 meters and click on another spot on
20 meters my second VFO/receiver will stay put on 15 meters.
This has nothing to do with internal settings, when I operate the FT2K
manually this way it works fine.

The only question is, are there provisions in the CAT protocol to do so?

Michael????? ;-)

Best regards,

Wilko

Hello Guys,

Another topic.

What is the easiest way to SEND a spot to a DX-cluster.
There is no option in the log screen like, select right mouse
click, 'send spot' or something like that.

Am I overlooking something? I get a bit tired of typing everything
manually in the packet window.

Best regards,

Topic: 2264 Message: 2266

I just tested it with my MKV and the second doesn't move. I thought it didn't but I wanted to be sure. Even if you're using VFO B and click on a spot only the A VFO changes. I don't ever remember VFO B changing in any previous version. On the MKV you cannot change VFO B unless you do it manually, in other words VFO B will not change bands when you change bands with VFO A... I do a lot of contesting using both CT & N1MM and neither of those even recognize VFO B.
I don't know if any of that info helps.

Hi Bill,

XMLog log files are Microsoft Access databases and there is lots of software out there that allows you to write scripts or programs that diddle the records. I've never tried it myself but there are folk out there who have...

If you use Access be sure to answer "No" to the "Do you want to convert the database" message. When you answer "No" it will give you a message that you cant change the database, but what it means is that you can't change field definitions/properties, etc. - you will be allowed to modify field values.

If you decide to become a database hacker be sure to back up your log and also do all your testing on a copy of the log file, not the real thing! I'd go so far as putting the test copy in another folder and renaming it to make it harder to make a mistake and hack the real log.

Mike & Wilko after I made my posting I wondered why you would want the sub VFO to track/band change with VFO A. My MKV has a big clarifier and I'm assuming the 2000 has the same, +/- 10khz. So for most, not all but most, split operations the clarifier is more than enough especially since a simple click switches the clarifier between TX/RX. I've never even thought about the 2 VFO's automatically tracking each other and I've had the MKV for 3 years.

Be careful using the contest fields. I don't think they export to
a .TXT file. I think they are included in ADIF though. Meaning this
method may be difficult to deal with in the future.

From: pa4doc
Topic: 2264 Message: 2274

Hello Mal,

I can understand your idea about this from your your point
of view however.....

The way you use the clarifier is the single RX operation style.
Your MKV has TWO receivers, how (or do) you use the second RX?

The idea is that your second RX(and TX) is used to listen to all the
callers on the offset frequency and try to find the station which is
beeing worked by the DX station. Then you send on the frequency of
your second RX and pray the DX station is still listening on that
same spot.

Now, to make my point clear, when I move from one band to an other by
clicking on the band map I have to press(time consuming) buttons on
my transceiver to get the second RX/TX in the same band.

From my point of view it would be preferrable to have BOTH VFO's
moved to the same spot.

I still think this will serve others too.

Best regards!

2276. RE: [XMLog] Re: split on FT-2000

Yahoo group: XMLog
Date: 2007-10-03 14:14:45 UTC
From: Craig Bradley
Topic: 2264 Message: 2276

I agree, even on rigs that only have one receiver, it is better to use the second VFO in spilt mode than use the RIT or clarifier. If you are moving your transmit frequency around in the pileup, you will lose the DX, although you could use XIT or TX CLAR on a FT box to do this, but when I have a sub-receiver available, I want to listen to my transmit frequency also and try to find where the DX is listening. Also having that nice big second VFO knob (if you have one) is great for moving around in the pileup while listening to the DX. For 40m SSB DX, the clarifier doesn't have enough range.

When changing bands if the second VFO does not change bands, it would be good to have split mode turned off. I have occasionally changed bands when in split mode and then transmitted (on the other band). Amplifiers do not like this and you may have the wrong antenna selected or a tuner setup wrong.

If the second VFO is changed, then you have a question of "to what frequency?", it would probably be the same as the first VFO. I can see an argument for leaving the second VFO where it was if you plan to go back to the first band also.

One solution to this would be to have a setup option where the user could select the desired actions for a band change.

I use Writelog for contesting and it controls the second VFO if there is a split frequency in the packet spot. This is really cool in a contest on 40m SSB when the DX is in foreign part of the band and listening up in the US band. When you click on him, your rig gets setup for both frequencies!

Just my 2 cents worth. Thanks for a great program Mike!

Thanks Mike, this was a piece of cake! Very easy to do. After following your instructions, I opened up a table view in Access and simply copied the entire column from Address5 to TestIn. I just closed the table and then closed Access. It does not give you a save option. You just have to close the table.

I did make a copy of my NT9K.log file to use as the test in another directory. I then opened XMLog and closed my regular log and opened the test log. Voila, everything copied perfectly with no truncation of my data. I was afraid the TestIn field length would truncate my club numbers, but it didn't.

Thanks for helping me!

2280. XMLog & Vista

Yahoo group: XMLog
Date: 2007-10-15 16:37:43 UTC
From: lyntontuk
Topic: 2280 Message: 2280

Hi,
I'm a Radio Amateur living in the UK and have been using XMLog for about 2 months.
Initially I ran XMLog on a Windows 2000 machine with no problems but am having some problems with it running on Windows Vista.
I'm guessing essentially it is not as yet supported under Vista but nonetheless I'm going to stick with it because I like the program so much.
I may well just have to move it back to the Windows 2000 machine :-)

My questions are:-

1. Is support planned for Vista or are there workarounds for the problems I list below.

2. As a UK amateur is there anything I need to be aware of that might just catch me out because this software is I imagine primarily written for American Hams ?

Vista problems
==========
1. XMLog crashes when CW Keyboard Window is opened.
2. XMLog crashes when Packet Window is closed.

There are a few others but the results are the same :-)

Any ideas on some workarounds ?

Thanks for an excellent piece of software.

Regards

Lynton

Am having a problem with rigcontrol using RIGBlaster Pro and the IC-7800.

Worked fine when I had the Icom ProII.

Any suggestions would be appreciated.

Thanks

Hi all,

Try the following.

Right-click on a spot in the spotsmap and select: show qso and check
call for
In my case it reverts back to the selected record in the log screen.

Anybody?

Running 5.42

Regards,

Wilko PA3BWK

Topic: 2282 Message: 2283

I am not sure what the problem is.

If I do this it does appear in the Show QSOs + Check Call Window which is what I would expect. It does not change the Q in the QSOs window. If I have worked the station before, it should select all of the Qs from that station. Currently, I do not have any spots for stations that I have worked, but that has worked in the past.

2284. Install problems - maybe some help

Yahoo group: XMLog
Date: 2007-10-28 17:24:45 UTC
From: n4tn
Topic: 2284 Message: 2284

I just finished a marathon effort to help my friend W4SK get XMLOG installed on a new laptop running XP. He experienced the same "out of date system files" type messages that some others have reported. He found that scrrun.dll was in windows/system32 as it should be, and that entering the regsvr32 command did not help. This morning I found that there is a brand new (maybe old but updated? Last Review: Oct 26, 2007) support page which addresses a related problem. In it(as I understand it), scrrrun.dll is OK, but a related file, scrrun.dep, contains a pointer to a non-existent .cab file which causes scrrrun.dll to fail.

An executeable file download is available in the Resolution section of the support page.

W4SK downloaded the file, executed it, re-booted, and the XMLOG install ran with no trouble. I thought that there might be others who are (or will be) encountering this problem. The support page with the fix is at:
http://support.microsoft.com/kb/254166

73 - Don Jones N4TN
(note: My email address above has been changed. Change "chartertn" to just "charter")

Hi Don, Thanks for the insight into this problem and for finding the official note from Microsoft. I had run into this problem myself at one point but assumed it was some screw-up local to my system. I must admit I used a more direct method of 'fixing' the problem, I just deleted the scrrun.dep file...

2286. XMLog LOTW Prototype

Yahoo group: XMLog
Date: 2007-10-29 18:52:05 UTC
From: Mike McAmis
Topic: 2286 Message: 2286

There is a prototype version of XMLog with LOTW features available at:

www.xmlog.com/lotw

This zip file contains an executable file for the XMLog LOTW Prototype (xmlog-lotw.exe). It also contains a document describing the prototype (xmlog-lotw.rtf).

Please check the documentation before trying out the .exe file.

Let me know what you think about the new look (the log window has been enlarged and re-organized to support some new fields) and also what you think about the new LOTW download/verify/apply features available from the Log Window's "Import" menu item.

Hi Mike,
Checked out the prototype XMLog. The only comment I have is the tab order of the first 6 fields. The way I operate, I use a paper log when mobile. I then enter the info later, and enter the date, time etc manually. I don't need to enter power and mode. So, I have to tab over these fields, where before I didn't.
The rest of the layout is good, and the borders make the layout look better.

I have not looked at the prototype, but I would also find this a great inconvenience. Apart from contests I also log manually on paper and enter them later. My power and mode are always 5W and CW and so do not want those extra tabs.

Another irritation I have with 5.40 is when importing ADIFs where you have to go through three seperate screens confirming you want to accept the defaults. When I want to import I know what I am doing and want to go straight to the window to choose the file, just like it used to do in earlier versions. Maybe you have done it right in the prototype?

2289. Re: [XMLog] XMLog LOTW Prototype

Yahoo group: XMLog
Date: 2007-10-30 14:04:05 UTC
From: Jim Roller
Topic: 2286 Message: 2289

Hi Mike,

Looks good. One question - if I skip records that show up on the validity report, will the LOTW be updated regardless? Most of the conflicts and bad data do not really interest me, I only want to know if I have the LOTW confirmation.

A suggestion - Reports: Can the reports (DXCC, WAS) indicate that BOTH an LOTW and QSL card are received from a station? I am getting ready to submit my 160m DXCC and I have 86 cards in hand plus 14 LOTW only confirmations. However, I have a total of 57 confirmations on LOTW, so when I submit I will only send in 29 actual cards, saving more cards from potential loss and also saving on postage costs. Perhaps on the LOTW excluded option, those stations with both card and LOTW confirmation could be flagged with an asterisk or something.

I downloaded 10,850 LOTW records and found 643 invalid records for a 6% error rate. Almost all were due to the old zone 04/05 conundrum. Other errors were due to folks not knowing the difference between the ITU and CQ zones, and some had no clues as to where they live or what a grid square is, hi.

The prototype really looks good. Keep up the good work!

73/CUL,

Jim, N4IR

2290. RE: [XMLog] XMLog LOTW Prototype

Yahoo group: XMLog
Date: 2007-10-30 16:21:58 UTC
From: Craig Bradley
Topic: 2286 Message: 2290

Hi Mike,

This is great!

I updated to 5.42 and installed the prototype. I was able to download my LoTW report with no problems. It might be good to not display the password for security reasons, a minor nit.

My report did not have any "Not in Log" or "Bad Data". As all of my LoTW uploads are from XMLog, I would have been surprised to see any of these. Out of 619 records, the program flagged 65 conflicts. I displayed that data in Excel and then sorted by problem. One note here, the report has merged cells and you need to un-merge the cells before doing a sort. The breakdown is:

County - 8

Grid - 37

Prefix W/KP2 - 3 (3 QSOs, same call, WP2Z)

State - 8 (4 with same call)

Zone - 9

I looked at some of the grids. I think that many of them are QRZ.com errors. The other likely problems are that people have moved (states, counties, grids, etc.). For older contacts, you probably do not want to change the data. Also, it would be good to flag any of these QSOs that have been previously confirmed, submitted, etc. as you probably do not want to touch those. Maybe the dreaded "Are Sure" window for these.

It might be nice to have some options like "replace all grids/states/counties" etc. for doing the update although this could be dangerous. This is only a first time problem thought some maybe it is better to "bite the bullet" and go through them one at a time. You could elect to change all of the records for one call at once though.

The log entry screen looks nice, I like the design, however I have a problem with the form factor; the window is too wide. I like to keep XMLog running all of the time on my logging computer which is a laptop. I have the log window in the lower right corner, the Show QSOs, Check Call window above it, the Packet window to the left with the Packet Spots Map on top of it. I have to make the Packet Spots Map too narrow to avoid overlapping the Log Window. If the Spots Map is too narrow, you cannot read the posting info at the bottom.

I would suggest moving the Mode and Power fields to the bottom so the RST fields could be where they are in the standard version (this would solve the tabbing problem) and also moving the Zone, Grid and IOTA to the bottom. This would allow for a narrower window. If you are using rig settings and a fixed pre-fill power, you don't need to enter these. It could be taller as vertical display space is not a problem. Also, when logging contacts, the 6 QSL fields are not needed, they could be optional (like the contest fields) or on another page, either a new page or on the Awards Tracking page (it might be nice to see them on this page when reviewing for submissions). The only time that you need them on the Log Window is when manually entering a paper log that may have QSL info.

I hope this helps Mike. I am looking forward to the next version. When you get into updating the actual log fields in the reports, could you add a Continent field to the custom reports area for Display Excel? That would be very useful for checking for 5-band WAC. Also, IOTA requires contacts from all continents.

Keep up the good work!

73,

- Craig, AE6RR

Topic: 2286 Message: 2291

Great effort Mike. This is something I have been waiting for with thoughts of changing log programs to get the features. I am glad that you are working on them.

Now for some sqauks.
1. The new improved log window is too long for my screen and I can't see the bottom. I have not figures out any way to resize the window to fit on the screen. I deleted the contest windows and that helped some, but I still can't see the bottom where it tells me how many contacts are selected and I use that a lot with a log of about 13,000 QSOs.
2. When I make an ADIF file to upload, I don't see the option to set LOTW sent to current date.
3. When I download and merge, the LOTW received date does not update.
4. When I update the LOTW received date manually for one record, it shows that date in all records.
5. When I merge LOTW downloaded data and it does not like the County, I need a drop down window to pick an acceptable county. It is real picky, like when you leave out the hyphen on the Alaska counties that have a hyphen, it rejects them.
6. The county data base does not include the several city/counties, such as Virginia Beach City, VA and St. Louis City, MO. This goes back to the old program, but now it stops you when you are merging and the only way around that I found is to enter some wrong county. It will not even let you pass by trying to delete the county entirely.

I hope these things aren't too hard to fix. I am looking forward to being to coordinate my log and LOTW without the manual entry that I have been using. I have about 900 Qs for October waiting to upload.

Cookie,

What screen resolution are you using?

I have mine set to 1280x1024 and it fits in less than ¼ of the
screen.\

You might try a higher resolution.

Subject: Re: [XMLog] XMLog LOTW Prototype

Great effort Mike. This is something I have been waiting for with
thoughts
of changing log programs to get the features. I am glad that you are
working
on them.

Now for some sqauks.
1. The new improved log window is too long for my screen and I can't
see the
bottom. I have not figures out any way to resize the window to fit on
the
screen. I deleted the contest windows and that helped some, but I still
can't see the bottom where it tells me how many contacts are selected
and I
use that a lot with a log of about 13,000 QSOs.
2. When I make an ADIF file to upload, I don't see the option to set
LOTW
sent to current date.
3. When I download and merge, the LOTW received date does not update.
4. When I update the LOTW received date manually for one record, it
shows
that date in all records.
5. When I merge LOTW downloaded data and it does not like the County, I
need
a drop down window to pick an acceptable county. It is real picky, like
when
you leave out the hyphen on the Alaska counties that have a hyphen, it
rejects them.
6. The county data base does not include the several city/counties,
such as
Virginia Beach City, VA and St. Louis City, MO. This goes back to the
old
program, but now it stops you when you are merging and the only way

around
that I found is to enter some wrong county. It will not even let you
pass by
trying to delete the county entirely.

I hope these things aren't too hard to fix. I am looking forward to
being to
coordinate my log and LOTW without the manual entry that I have been
using.
I have about 900 Qs for October waiting to upload.

Yahoo group: XMLog
Date: 2007-10-31 17:42:22 UTC
From: WILLIS COOKE
Topic: 2286 Message: 2298

Mine was set the same at 96DPI. My display was only a little bit too large at 1024x728. Just enough that I could not read the very bottom which tells how many qsos are selected. Some may not use this much, but I use it a lot. The next higher resolution solved the problem so I am ok on that one. Now to get the date problem solved and I will be much happier. I have done some programming and I can easily understand how when you fix something, something else goes to pot. But I am a big user of LOTW so very anxious for everything to be working. This is a very big improvement for XMLog and a great help to me.

2300. Re: [XMLog] XMLog LOTW Prototype

Yahoo group: XMLog
Date: 2007-10-31 23:30:29 UTC
From: WILLIS COOKE
Topic: 2286 Message: 2300

Mal, under the Options button the first option allows you to choose the fields that you like to see on your entry screen. I am showing QSO Info, Address, Award Tracking and Time Off. I was showing the contest fields as well. When the new fields were added for LOTW and EQSL the block became too long to be displayed on the height of the screen as I had my setup. Since the drag function is at the top of the screen I could not drag the block up enough to see the bottom lines. Increasing my resolution to1152 x 864 allowed me to see the whole block when I deleted the Contest fields. My entry block now occupies about half of my screen which is about what I want. Craig's suggestion for increasing the resolution was right on the money for me. Perhaps you have elected to show less information on your entry screen or are still using the default. I don't remember what the default is because I have been using this screen for a year or so. Make sense?

I was not aware that one could select font size. How do you do that and how
do I tell what font size I have selected? I do know how to change font on my
email reader and I had to go to a larger font when I increased the pixel
size. I am using 12 Times New Roman for email.

Yes, it is good to be able to help each other out.

I am surprised that it was that big with 1024x728 though. Do you have a
large font size selected?

Subject: Re: [XMLog] XMLog LOTW Prototype

Great effort Mike. This is something I have been waiting for with thoughts
of changing log programs to get the features. I am glad that you are working
on them.

Now for some sqauks.
1. The new improved log window is too long for my screen and I can't see the
bottom. I have not figures out any way to resize the window to fit on the
screen. I deleted the contest windows and that helped some, but I still
can't see the bottom where it tells me how many contacts are selected and I
use that a lot with a log of about 13,000 QSOs.
2. When I make an ADIF file to upload, I don't see the option to set LOTW
sent to current date.
3. When I download and merge, the LOTW received date does not update.
4. When I update the LOTW received date manually for one record, it shows
that date in all records.
5. When I merge LOTW downloaded data and it does not like the County, I need
a drop down window to pick an acceptable county. It is real picky, like when
you leave out the hyphen on the Alaska counties that have a hyphen, it
rejects them.
6. The county data base does not include the several city/counties, such as
Virginia Beach City, VA and St. Louis City, MO. This goes back to the old
program, but now it stops you when you are merging and the only way around
that I found is to enter some wrong county. It will not even let you pass by
trying to delete the county entirely.

I hope these things aren't too hard to fix. I am looking forward to being to
coordinate my log and LOTW without the manual entry that I have been using.
I have about 900 Qs for October waiting to upload.

Mal, under the Options button the first option allows you to choose the fields that you like to see on your entry screen. I am showing QSO Info, Address, Award Tracking and Time Off. I was showing the contest fields as well. When the new fields were added for LOTW and EQSL the block became too long to be displayed on the height of the screen as I had my setup. Since the drag function is at the top of the screen I could not drag the block up enough to see the bottom lines. Increasing my resolution to1152 x 864 allowed me to see the whole block when I deleted the Contest fields. My entry block now occupies about half of my screen which is about what I want. Craig's suggestion for increasing the resolution was right on the money for me. Perhaps you have elected to show less information on your entry screen or are still using the default. I don't remember what the default is because I have been using this screen for a year or so. Make sense?

I've been watching this thread and I'm really confused. First a
standard resolution is 1024 X 768. Second my resolution is set to 1024 X 768
and the new version only covers 25% of my screen. There is no place
where anything is cutoff. Also my date/time are dead on the money entering
a new entry manually.

Now the one problem I am having is when try to create a new log entry
automatically from the packet terminal window the program crashes. It
opens an idiot window that says runtime error '5' and then closes
down/crashes. Everything else from right-click works perfectly(in my case
left-click)

Subject: Re: [XMLog] XMLog LOTW Prototype

I've been watching this thread and I'm really confused. First a
standard resolution is 1024 X 768. Second my resolution is set to 1024
X 768
and the new version only covers 25% of my screen. There is no place
where anything is cutoff. Also my date/time are dead on the money
entering
a new entry manually.

Now the one problem I am having is when try to create a new log entry
automatically from the packet terminal window the program crashes. It
opens an idiot window that says runtime error '5' and then closes
down/crashes. Everything else from right-click works perfectly(in my
case
left-click)

Mine was set the same at 96DPI. My display was only a little bit too
large at 1024x728. Just enough that I could not read the very bottom
which tells how many qsos are selected. Some may not use this much,
but
I use it a lot. The next higher resolution solved the problem so I am
ok on that one. Now to get the date problem solved and I will be much
happier. I have done some programming and I can easily understand how
when you fix something, something else goes to pot. But I am a big
user of LOTW so very anxious for everything to be working. This is a
very
big improvement for XMLog and a great help to me.

Subject: Re: [XMLog] XMLog LOTW Prototype

Great effort Mike. This is something I have been waiting for with
thoughts
of changing log programs to get the features. I am glad that you are
working
on them.

Now for some sqauks.
1. The new improved log window is too long for my screen and I can't

see the
bottom. I have not figures out any way to resize the window to fit on
the
screen. I deleted the contest windows and that helped some, but I still
can't see the bottom where it tells me how many contacts are selected
and I
use that a lot with a log of about 13,000 QSOs.
2. When I make an ADIF file to upload, I don't see the option to set
LOTW
sent to current date.
3. When I download and merge, the LOTW received date does not update.
4. When I update the LOTW received date manually for one record, it
shows
that date in all records.
5. When I merge LOTW downloaded data and it does not like the County, I
need
a drop down window to pick an acceptable county. It is real picky, like
when
you leave out the hyphen on the Alaska counties that have a hyphen, it
rejects them.
6. The county data base does not include the several city/counties,
such as
Virginia Beach City, VA and St. Louis City, MO. This goes back to the
old
program, but now it stops you when you are merging and the only way
around
that I found is to enter some wrong county. It will not even let you
pass by
trying to delete the county entirely.

I hope these things aren't too hard to fix. I am looking forward to
being to
coordinate my log and LOTW without the manual entry that I have been
using.
I have about 900 Qs for October waiting to upload.

Mal, under the Options button the first option allows you to choose the fields that you like to see on your entry screen. I am showing QSO Info, Address, Award Tracking and Time Off. I was showing the contest fields as well. When the new fields were added for LOTW and EQSL the block became too long to be displayed on the height of the screen as I had
my setup. Since the drag function is at the top of the screen I could not drag the block up enough to see the bottom lines. Increasing my resolution to1152 x 864 allowed me to see the whole block when I deleted
the Contest fields. My entry block now occupies about half of my screen which is about what I want. Craig's suggestion for increasing the
resolution was right on the money for me. Perhaps you have elected to show less information on your entry screen or are still using the default. I don't remember what the default is because I have been using this
screen for a year or so. Make sense?

From: N7MAL
Topic: 2286 Message: 2305

Well now I understand the/your problem. You, or no one else, needs that windows stuff on the bottom of your screen. Here's the fix:
1. Click on the start button in the lower left of your screen.
2. Go up to settings and click on Task bar and start menu.
3. Check Auto-Hide the task bar and then click on apply.
All that windows stuff on the bottom of your screen will disappear until you move your mouse cursor down to the bottom.
Good Luck

Subject: Re: [XMLog] XMLog LOTW Prototype

Great effort Mike. This is something I have been waiting for with
thoughts
of changing log programs to get the features. I am glad that you are
working
on them.

Now for some sqauks.
1. The new improved log window is too long for my screen and I can't
see the
bottom. I have not figures out any way to resize the window to fit on
the
screen. I deleted the contest windows and that helped some, but I still
can't see the bottom where it tells me how many contacts are selected
and I
use that a lot with a log of about 13,000 QSOs.
2. When I make an ADIF file to upload, I don't see the option to set
LOTW
sent to current date.
3. When I download and merge, the LOTW received date does not update.
4. When I update the LOTW received date manually for one record, it
shows
that date in all records.
5. When I merge LOTW downloaded data and it does not like the County, I

need
a drop down window to pick an acceptable county. It is real picky, like when
you leave out the hyphen on the Alaska counties that have a hyphen, it rejects them.
6. The county data base does not include the several city/counties, such as
Virginia Beach City, VA and St. Louis City, MO. This goes back to the old
program, but now it stops you when you are merging and the only way around
that I found is to enter some wrong county. It will not even let you pass by
trying to delete the county entirely.

I hope these things aren't too hard to fix. I am looking forward to being to
coordinate my log and LOTW without the manual entry that I have been using.
I have about 900 Qs for October waiting to upload.

Cookie, K5EWJ

2306. RE: [XMLog] XMLog LOTW Prototype

Yahoo group: XMLog
Date: 2007-11-01 05:18:57 UTC
From: Craig Bradley
Topic: 2286 Message: 2306

Hi Mal & Cookie,

Thanks for sorting this out. I couldn't figure out what the problem was either as my window also fit in the bottom corner, no problem. I select the fields using the "Show using "Show" button, not eh "Always Show". This makes for a much smaller window and you can easily click that show button to see the other fields. I find that 99% of the time all I need is the QSO info fields screen. I had forgotten that you could do this. Showing them all at once was a problem for me with the old program as I like to put the Show QSOs and Check Call window above the logging window.

Cookie, maybe you could try one of these other setups, it works fine for me. The Station Info is one that I very rarely look at. The address fields are only of interest when preparing cards and the submitted/accepted is only needed when preparing for or doing submissions.

Glad we are all on the same "page" now though.

Subject: Re: [XMLog] XMLog LOTW Prototype

Mal, under the Options button the first option allows you to choose the fields that you like to see on your entry screen. I am showing QSO Info, Address, Award Tracking and Time Off. I was showing the contest fields as well. When the new fields were added for LOTW and EQSL the block became too long to be displayed on the height of the screen as I had
my setup. Since the drag function is at the top of the screen I could not drag the block up enough to see the bottom lines. Increasing my resolution to1152 x 864 allowed me to see the whole block when I deleted
the Contest fields. My entry block now occupies about half of my screen which is about what I want. Craig's suggestion for increasing the
resolution was right on the money for me. Perhaps you have elected to show less information on your entry screen or are still using the default. I don't remember what the default is because I have been using this
screen for a year or so. Make sense?

Subject: Re: [XMLog] XMLog LOTW Prototype

I've been watching this thread and I'm really confused. First a standard resolution is 1024 X 768. Second my resolution is set to 1024 X 768
and the new version only covers 25% of my screen. There is no place where anything is cutoff. Also my date/time are dead on the money entering
a new entry manually.

Now the one problem I am having is when try to create a new log entry automatically from the packet terminal window the program crashes. It opens an idiot window that says runtime error '5' and then closes down/crashes. Everything else from right-click works perfectly(in my case
left-click)

Subject: Re: [XMLog] XMLog LOTW Prototype

Mine was set the same at 96DPI. My display was only a little bit too large at 1024x728. Just enough that I could not read the very bottom which tells how many qsos are selected. Some may not use this much, but
I use it a lot. The next higher resolution solved the problem so I am ok on that one. Now to get the date problem solved and I will be much happier. I have done some programming and I can easily understand how when you fix something, something else goes to pot. But I am a big user of LOTW so very anxious for everything to be working. This is a very
big improvement for XMLog and a great help to me.

2307. bugs

Yahoo group: XMLog
Date: 2007-11-01 07:39:44 UTC
From: N7MAL
Topic: 2307 Message: 2307

So far I've found 1 bug and a bunch of stuff that is questionable.
The bug is the program crashes when I try to generate a log entry from the right-click inside the packet window.
The questionable stuff is I got 65 errors when trying to validate from LOTW. Not a 1 of those errors means anything to me. I.E. VY1JA: I logged NT and LOTW logged YT. I don't care about it, but unfortunately the program says it won't/can't validate until I resolve those errors. I have uploaded 15,000 QSO and had 65 errors. Not one of the errors is meaningful and even worse some of them are not resolvable. I.E. 3 of the Q's have a county error from different State QSO parties. The error from LOTW said the county doesn't exist even though I logged it correctly because there was a match. I think we need another button that says "I don't care"....hihihihihi
The interesting part of all this is I have received LOTW CWDXCC, I have 40M LOTW CWDXCC and LOTW CWWAS, so I'm doing something right. Now if I could just convince MLOG.
Thanks Mike for all your effort you done a really good job. The new layout and all its options are great.

Yahoo group: XMLog
Date: 2007-11-01 12:44:43 UTC
From: WILLIS COOKE
Topic: 2307 Message: 2309

Mal, I found some of these same errors. Some of them are from problems in the pre-LOTW program that should be easy to fix. XM Log does not recognize any abbreviation for Labrador, has a hyphen in some of the counties in Alaska and will not accept the same spelling without the hyphen. Some states have cities that are not in a county, such as Virginia Beach, VA and St. Louis, MO. In XM you could type in Virginia Beach City or St. Louis City and it would accept them and go on. It would not put them in the county count, but it would go on. The LOTW program has a trap that will not let you pass until you put in something that is in the data list. I got passed them by putting in something, even if it was wrong. I'm sure that Mike will find a way around for us when he gets time. After all, this is a prototype and not a finished product. We are the Beta testers and a major change like this one is not an easy task for the programmer. We also must
remember that this is a shareware program and he is not making major bucks out of this. Mike, please keep up the good work and consider these remarks as an attempt to help rather than complaints.

From: WILLIS COOKE
Topic: 2286 Message: 2310

Like any major program, there are options that any user totally neglects to use. You are certainly correct that maybe showing this data all the time is not necessary for me. I want to keep the data and use it a lot, but bringing it up only when I need it is something that never clicked for me that I could do it as an option. I keep the Show QSOs/Check Call on the upper left, the Packet Cluster on the lower left and the logging window on the right. That leaves a hole in the center top that accesses the other program, usually my email. This forum is a great tool that will let us exchange ideas about how to best use the program. Probably no one has enough mastery to use all of the available features, but this type of dialog will help a lot.

Subject: Re: [XMLog] XMLog LOTW Prototype

Mal, under the Options button the first option allows you to choose the
fields that you like to see on your entry screen. I am showing QSO
Info, Address, Award Tracking and Time Off. I was showing the contest
fields as well. When the new fields were added for LOTW and EQSL the
block became too long to be displayed on the height of the screen as I
had
my setup. Since the drag function is at the top of the screen I could
not drag the block up enough to see the bottom lines. Increasing my
resolution to1152 x 864 allowed me to see the whole block when I
deleted
the Contest fields. My entry block now occupies about half of my
screen which is about what I want. Craig's suggestion for increasing
the
resolution was right on the money for me. Perhaps you have elected to
show less information on your entry screen or are still using the
default. I don't remember what the default is because I have been
using this
screen for a year or so. Make sense?

Subject: Re: [XMLog] XMLog LOTW Prototype

I've been watching this thread and I'm really confused. First a
standard resolution is 1024 X 768. Second my resolution is set to 1024
X 768
and the new version only covers 25% of my screen. There is no place
where anything is cutoff. Also my date/time are dead on the money
entering
a new entry manually.

Now the one problem I am having is when try to create a new log entry
automatically from the packet terminal window the program crashes. It
opens an idiot window that says runtime error '5' and then closes
down/crashes. Everything else from right-click works perfectly(in my
case
left-click)

Subject: Re: [XMLog] XMLog LOTW Prototype

Mine was set the same at 96DPI. My display was only a little bit too
large at 1024x728. Just enough that I could not read the very bottom
which tells how many qsos are selected. Some may not use this much,
but
I use it a lot. The next higher resolution solved the problem so I am
ok on that one. Now to get the date problem solved and I will be much
happier. I have done some programming and I can easily understand how
when you fix something, something else goes to pot. But I am a big
user of LOTW so very anxious for everything to be working. This is a
very
big improvement for XMLog and a great help to me.

Cookie,

What screen resolution are you using?

I have mine set to 1280x1024 and it fits in less than < of the
screen.\

You might try a higher resolution.

Subject: Re: [XMLog] XMLog LOTW Prototype

Great effort Mike. This is something I have been waiting for with
thoughts
of changing log programs to get the features. I am glad that you are
working
on them.

Now for some sqauks.
1. The new improved log window is too long for my screen and I can't
see the
bottom. I have not figures out any way to resize the window to fit on
the
screen. I deleted the contest windows and that helped some, but I still
can't see the bottom where it tells me how many contacts are selected
and I

use that a lot with a log of about 13,000 QSOs.
2. When I make an ADIF file to upload, I don't see the option to set LOTW
sent to current date.
3. When I download and merge, the LOTW received date does not update.
4. When I update the LOTW received date manually for one record, it shows
that date in all records.
5. When I merge LOTW downloaded data and it does not like the County, I need
a drop down window to pick an acceptable county. It is real picky, like when
you leave out the hyphen on the Alaska counties that have a hyphen, it rejects them.
6. The county data base does not include the several city/counties, such as
Virginia Beach City, VA and St. Louis City, MO. This goes back to the old
program, but now it stops you when you are merging and the only way around
that I found is to enter some wrong county. It will not even let you pass by
trying to delete the county entirely.

I hope these things aren't too hard to fix. I am looking forward to being to
coordinate my log and LOTW without the manual entry that I have been using.
I have about 900 Qs for October waiting to upload.

Subject: [XMLog] XMLog LOTW Prototype

There is a prototype version of XMLog with LOTW features available at:

www.xmlog.com/lotw

This zip file contains an executable file for the XMLog LOTW Prototype (xmlog-lotw.exe). It also contains a document describing the prototype (xmlog-lotw.rtf).

Please check the documentation before trying out the .exe file.

Let me know what you think about the new look (the log window has been enlarged and re-organized to support some new fields) and also what you

think about the new LOTW download/verify/apply features available from
the Log Window's "Import" menu item.

Mike - W1ECT

2313. [XMLog] bugs up-date

Yahoo group: XMLog
Date: 2007-11-02 00:03:19 UTC
From: N7MAL
Topic: 2313 Message: 2313

Sometimes I have trouble explaining myself so I've uploaded a screenshot of the biggest error message:
http://n7mal.com/screen123.gif

Here's the problem and why I'm so bent out of shape about it. By the way it is not all MLOG's fault/problem. At least 5 or 6 of the errors were related to sweepstakes contest entries. The errors are invalid zone entries. Zone entries ARE NOT part of the sweepstakes exchange and are never entered or uploaded to LOTW. At least 2 of the entries are for invalid W4 counties during the 7qp QSO party. You DON'T enter W4 counties. I never entered or uploaded those wrong counties. More than 75% of my LOTW errors are errors that don't exist. At least 5 of the entries there is no option to correct them.
So you see that is why I ask for the 'I don't care' button.
Hope that makes more sense.
Possible clues: All my contest uploads to LOTW were either from CT or N1MM adif files and then those same adif files were loaded in MLOG. Yes they were converted to TQ8 files for LOTW upload.

Subject: [XMLog] bugs

So far I've found 1 bug and a bunch of stuff that is questionable.
The bug is the program crashes when I try to generate a log entry from the right-click inside the packet window.
The questionable stuff is I got 65 errors when trying to validate from LOTW. Not a 1 of those errors means anything to me. I.E. VY1JA: I logged NT and LOTW logged YT. I don't care about it, but unfortunately the program says it won't/can't validate until I resolve those errors. I have uploaded 15,000 QSO and had 65 errors. Not one of the errors is meaningful and even worse some of them are not resolvable. I.E. 3 of the Q's have a county error from different State QSO parties. The error from LOTW said the county doesn't exist even though I logged it correctly because there was a match. I think we need another button that says "I don't care"....hihihihihi
The interesting part of all this is I have received LOTW CWDXCC, I have 40M LOTW CWDXCC and LOTW CWWAS, so I'm doing something right. Now if I could just convince MLOG.
Thanks Mike for all your effort you done a really good job. The new layout and all its options are great.

Hi Mal,

Are you using QRZ.com or some other call data base?

When I upload contest logs from Writelog into XMLog, XMLog fills in the remaining info from QRZ.com. I found that quite a few of my errors were due to inaccurate info in QRZ.com. They consist of states, counties, grids locators, zones, etc. Most of them are don't care unless you what to use the LoTW QSL for an award. I found that I lost a state for WAS on one band recently because the LoTW QSL was from a different state that I didn't need.

I would like having an option that lets you know of you have a paper QSL before updating to the LoTW info, as you may want to keep your log entry in agreement with the card. If the station moved since the QSL and then submitted to LoTW, you don't want to use the LoTW QSL (unless is it gives you a new one :-))

Yahoo group: XMLog
Date: 2007-11-02 15:33:05 UTC
From: Craig Bradley
Topic: 2313 Message: 2316

Hi Mal,

You would not need to have anything from QRZ.com installed on your computer. XMLog will go out on the Internet and lookup the station. Under Options/Callbook Setup, is something selected under Callbook Type? If it is, XMLog will lookup every QSO when you enter it or import it and fill in the blanks. Those could be the fields that you did not enter, but do not agree with LoTW.

Or I am misunderstanding the problem?

Yes, this is a challenge, I now see why Mike wanted "us" think about this.

Not one of the errors is meaningful and even worse some of them are not resolvable. I.E. 3 of the Q's have a county error from different State QSO parties. The error from LOTW said the county doesn't exist even though I logged it correctly because there was a match. I think we need another button that says "I don't care"....hihihihihi
The interesting part of all this is I have received LOTW CWDXCC, I have 40M LOTW CWDXCC and LOTW CWWAS, so I'm doing something right. Now if I could just convince MLOG.
Thanks Mike for all your effort you done a really good job. The new layout and all its options are great.

2317. Re: [XMLog] bugs up-date

Yahoo group: XMLog
Date: 2007-11-02 15:53:39 UTC
From: WILLIS COOKE
Topic: 2313 Message: 2317

When data comes from different sources there is bound to be some disagreement. Be it QRZ.Com, LOTW or XMLog the information is originally entered manually and occasionally wrong. Some don't understand that W6ABC in Missouri is in call area 0, ITU Zone 7 and CQ Zone 4. When asked for Zone in LOTW the person has to know that he is asked for the CQ Zone, but may not and answer 4, 6, 7 or 0 or maybe something else. Mike can't help this quandary, but I hope that he can make the program so that the user can decide which to record and move on. We users must keep in mind that this is either a Beta version or maybe pre-Beta at this point and we will all have to wait for Mike to have time to fix the problems. If you have ever written a program you know that it is impossible to anticipate all the ways someone can find to screw it up. The more users you have, the more ingenious they will be at picking holes in your work. If it is hard to write a program for yourself, multiply that by the number of users to find out how hard it is to write for the public. I am as impatient as anyone else for the program to be finished and bullet proof, but we have to wait. Keep on trucking Mike, the program is good and getting better.

Hi Mal,

You would not need to have anything from QRZ.com installed on your
computer.
XMLog will go out on the Internet and lookup the station. Under
Options/Callbook Setup, is something selected under Callbook Type? If
it
is, XMLog will lookup every QSO when you enter it or import it and fill
in
the blanks. Those could be the fields that you did not enter, but do
not
agree with LoTW.

Or I am misunderstanding the problem?

Yes, this is a challenge, I now see why Mike wanted "us" think about
this.

Craig: You have addressed some more valid points. I do not have QRZ installed on my computer so if there is any updating going on it is done in
the background without my knowledge. I don't do any paper QSLing so I have
no need for QRZ. I've been a ham for 50 years and have never sent in a card.

I am going to try to find some time to post some of the error messages but
this is a nutzo time for me and sweepstakes this weekend. I am mostly concerned about the errors coming from LOTW that have no option to either
fix or accept. The only option is 'skip', then you can't update because you
have unresolved errors. A real catch 22.
Ahhhhh the joys of beta testing... :-)

Subject: RE: [XMLog] bugs up-date

Hi Mal,

Are you using QRZ.com or some other call data base?

When I upload contest logs from Writelog into XMLog, XMLog fills in the remaining info from QRZ.com. I found that quite a few of my errors were due to inaccurate info in QRZ.com. They consist of states, counties, grids
locators, zones, etc. Most of them are don't care unless you what to use
the LoTW QSL for an award. I found that I lost a state for WAS on one band
recently because the LoTW QSL was from a different state that I didn't need.

I would like having an option that lets you know of you have a paper QSL

before updating to the LoTW info, as you may want to keep your log
entry in
agreement with the card. If the station moved since the QSL and then
submitted to LoTW, you don't want to use the LoTW QSL (unless is it
gives
you a new one :-))

To: XMLog@yahoogroups. <mailto:XMLog%40yahoogroups.com> com
Subject: [XMLog] bugs up-date

Sometimes I have trouble explaining myself so I've uploaded a
screenshot of
the biggest error message:
http://n7mal. <http://n7mal. <http://n7mal.com/screen123.gif>
com/screen123.gif> com/screen123.gif

Here's the problem and why I'm so bent out of shape about it. By the
way it
is not all MLOG's fault/problem. At least 5 or 6 of the errors were
related
to sweepstakes contest entries. The errors are invalid zone entries.
Zone
entries ARE NOT part of the sweepstakes exchange and are never entered
or
uploaded to LOTW. At least 2 of the entries are for invalid W4 counties
during the 7qp QSO party. You DON'T enter W4 counties. I never entered
or
uploaded those wrong counties. More than 75% of my LOTW errors are
errors
that don't exist. At least 5 of the entries there is no option to
correct
them.
So you see that is why I ask for the 'I don't care' button.
Hope that makes more sense.
Possible clues: All my contest uploads to LOTW were either from CT or
N1MM
adif files and then those same adif files were loaded in MLOG. Yes they
were
converted to TQ8 files for LOTW upload.

Hi Craig: 10 hours ago I entered a QSO with you in my log. I have looked you up on QRZ 3 times since then. There have been no fields filled in that I did not fill in including zone. In the options I have had selected, for years, QRZ.
Fortunately I saved the original log, and the whole program, with a renamed directory so I can go back and check the original log to see what changes, if any, were made. That won't happen until after sweepstakes.

From: N7MAL
Topic: 2313 Message: 2321

Willis slow down just a little, drink a cup of coffee. No one is bad mouthing or in any way criticizing Mike or his programming abilities. I fully & completely understand this is a beta version. What you have to understand the only way for Mike, or any programmer, to know about 'bugs' is to have them reported. The only way to know if something additional is needed is to have it reported/requested. Please stop trying to discourage guys from reporting bugs and making suggestions. You only slow down progress.
I am in a really good position to evaluate the beta version because I have 5,000 QSO's confirmed on LOTW. Those QSO's are from contests and daily DXing. The contest QSO's are submitted in a format unique to each contest. When I see something reported from LOTW that is not unique to a particular contest, and is reported as an error, I'm going to report it with more enthusiasm than a run of the mill bug. This especially applies to zone errors when no zone was uploaded to LOTW, or even more bizarre when county errors are reported by LOTW when no county was ever uploaded, or entered in my log. Right now there is no way to either fix, or ignore, some of these errors so my log cannot be validated. The errors are not operator generated errors but are anomalies between LOTW & MLOG.
I hate to be so long winded but Mike needs every input he can get to help him find a way to resolve these issues. If he can see 4 or 5 or 6 different views on an error it makes his job easier.

2322. Re: bugs up-date and maybe some answers

Yahoo group: XMLog
Date: 2007-11-03 10:27:09 UTC
From: Michael McCarthy
Topic: 2313 Message: 2322

There is something that everyone should know about LoTW. These are not "errors" in the sense that it reports a discrepancy. When you log a QSO, regardless of contest or casual operating, state or province and zone information is "guessed" or entered by you into XMLog.

Now the guy on the other end uploads his logs to LoTW and "signs" it with his key. This key puts certain state and zone information into the LoTW record.

When you download a QSL, XMLog correctly tells you that the information doesn't match what is in YOUR log. If the signer doesn't use a key with the correct information or XMLog didn't record the "correct" info you will get a discrepancy.

Zones are not part of the SS exchange, but they ARE part of the LoTW QSL record. XMLog might select the wrong zone based on the callsign prefix. People do move and don't change callsigns. I accept whatever LoTW tells me as that is the only way the QSL will be valid, even if the other end didn't sign it correctly.

XM Log guesses the CQ Zone from the state that you enter if you don't enter the zone if the call indicates it is US For a DX contact it will compute the Zone if it can. For Australia and Russia where the Zone is not apparent from the Call it will ask you to enter a Zone or unknown. The CQWW contests include a Zone exchange, maybe some others, but ARRL contests include a section which allows the CQ Zone and the State to be computed if the ADIF transfer codes the information correctly. This comes from the logging program which may vary. I use N1MM for most contests and Win1010 or N3FJP for Ten-Ten contests, all of which seem to work OK. LOTW allows you to have multiple keys so that you can log your contacts for as many QTHs as you have, but it has no way to correct errors if you make a mistake and gets very complicated if a ham does a lot of mobile. Of course, Mike has no way to prevent these mistakes from getting in. He can only flag them and
give you utilities to correct the mistakes to what you judge the best information. Sometimes the correct information is obvious, sometimes it is not. The finished program is pretty good. The only hole that I am aware of is that it does not provide for the several cities that are not in a county from the drop down menu. St. Louis City, MO and Virginia Beach City, VA are two examples. You can type in an entry that is not available on the drop down in the regular XM Log, but the LOTW upload utility limits you to the counties listed on the drop down menu at the present time.

Hi Craig: 10 hours ago I entered a QSO with you in my log. I have looked you up on QRZ 3 times since then. There have been no fields filled in that I did not fill in including zone. In the options I have had selected, for years, QRZ.
Fortunately I saved the original log, and the whole program, with a renamed directory so I can go back and check the original log to see what changes, if any, were made. That won't happen until after sweepstakes.

Hi Mal,

You would not need to have anything from QRZ.com installed on your computer. XMLog will go out on the Internet and lookup the station. Under Options/Callbook Setup, is something selected under Callbook Type? If it is, XMLog will lookup every QSO when you enter it or import it and fill in the blanks. Those could be the fields that you did not enter, but do not agree with LoTW.

Or I am misunderstanding the problem?

Yes, this is a challenge, I now see why Mike wanted "us" think about this.

Craig: You have addressed some more valid points. I do not have QRZ
installed on my computer so if there is any updating going on it is done in
the background without my knowledge. I don't do any paper QSLing so I have
no need for QRZ. I've been a ham for 50 years and have never sent in a card.

I am going to try to find some time to post some of the error messages but
this is a nutzo time for me and sweepstakes this weekend. I am mostly
concerned about the errors coming from LOTW that have no option to either
fix or accept. The only option is 'skip', then you can't update because you
have unresolved errors. A real catch 22.
Ahhhhh the joys of beta testing... :-)

Subject: RE: [XMLog] bugs up-date

Hi Mal,

Are you using QRZ.com or some other call data base?

When I upload contest logs from Writelog into XMLog, XMLog fills in the
remaining info from QRZ.com. I found that quite a few of my errors were
due to inaccurate info in QRZ.com. They consist of states, counties, grids
locators, zones, etc. Most of them are don't care unless you what to use
the LoTW QSL for an award. I found that I lost a state for WAS on one band
recently because the LoTW QSL was from a different state that I didn't need.

I would like having an option that lets you know of you have a paper QSL before updating to the LoTW info, as you may want to keep your log entry in agreement with the card. If the station moved since the QSL and then submitted to LoTW, you don't want to use the LoTW QSL (unless is it gives you a new one :-))

Sometimes I have trouble explaining myself so I've uploaded a screenshot of the biggest error message:
http://n7mal. <http://n7mal. <http://n7mal. <http://n7mal.com/screen123.gif> com/screen123.gif>
com/screen123.gif> com/screen123.gif

Here's the problem and why I'm so bent out of shape about it. By the way it is not all MLOG's fault/problem. At least 5 or 6 of the errors were related to sweepstakes contest entries. The errors are invalid zone entries. Zone entries ARE NOT part of the sweepstakes exchange and are never entered or uploaded to LOTW. At least 2 of the entries are for invalid W4 counties during the 7qp QSO party. You DON'T enter W4 counties. I never entered or uploaded those wrong counties. More than 75% of my LOTW errors are errors that don't exist. At least 5 of the entries there is no option to correct them.
So you see that is why I ask for the 'I don't care' button.
Hope that makes more sense.
Possible clues: All my contest uploads to LOTW were either from CT or N1MM adif files and then those same adif files were loaded in MLOG. Yes they were converted to TQ8 files for LOTW upload.

Subject: [XMLog] bugs

So far I've found 1 bug and a bunch of stuff that is questionable.
The bug is the program crashes when I try to generate a log entry from the right-click inside the packet window.
The questionable stuff is I got 65 errors when trying to validate from LOTW. Not a 1 of those errors means anything to me. I.E. VY1JA: I logged NT and LOTW logged YT. I don't care about it, but unfortunately the program says it won't/can't validate until I resolve those errors. I have uploaded 15,000 QSO and had 65 errors. Not one of the errors is meaningful and even worse some of them are not resolvable. I.E. 3 of the Q's have a county error from different State QSO parties. The error from LOTW said the county doesn't exist even though I logged it correctly because there was a match. I think we need another button that says "I don't care"....hihihihihi
The interesting part of all this is I have received LOTW CWDXCC, I have 40M LOTW CWDXCC and LOTW CWWAS, so I'm doing something right. Now if I could just convince MLOG.
Thanks Mike for all your effort you done a really good job. The new layout and all its options are great.

From: Craig Bradley
Topic: 2313 Message: 2326

Hi Mal,

The SS will be a good opportunity to see where the zones, etc. are coming from.

After the contest and importing your contest log into XMLog, you can compare the contest ADIF with the entries in XMLog. XMLog does guess at countries if the box is checked in Import Options 3 (defaulted to checked). Maybe the zones are filled in here also?

Then you can compare the LoTW QSLs also.

Good luck in the contest!

There is something that everyone should know about LoTW. These are
not "errors" in the sense that it reports a discrepancy. When you log
a QSO, regardless of contest or casual operating, state or province
and zone information is "guessed" or entered by you into XMLog.

Now the guy on the other end uploads his logs to LoTW and "signs" it
with his key. This key puts certain state and zone information into
the LoTW record.

When you download a QSL, XMLog correctly tells you that the
information doesn't match what is in YOUR log. If the signer doesn't
use a key with the correct information or XMLog didn't record the
"correct" info you will get a discrepancy.

Zones are not part of the SS exchange, but they ARE part of the LoTW
QSL record. XMLog might select the wrong zone based on the callsign
prefix. People do move and don't change callsigns. I accept whatever
LoTW tells me as that is the only way the QSL will be valid, even if
the other end didn't sign it correctly.

2327. Now I'm unhappy

Yahoo group: XMLog
Date: 2007-11-03 17:55:17 UTC
From: N7MAL
Topic: 2327 Message: 2327

I just finished reading Mr. Willis's posting and it gave me a clue, so I tried it. I entered a state for the AE6RR log entry and XMLOG filled in the blank zone and country. That makes me very unhappy. I've been using XMLOG for many years and was not aware XMLOG filled in blanks, especially from imported ADIF files. I can understand XMLOG being helpful with manual entries, that is what is called, a 'feature'.
Before anyone beats me up here is why I am unhappy: Tomorrow when SS is over I will do all the 'house-keeping'. I will create all the necessary 'post-contest' files. From these files I will do the 3830 brag, I will convert the ADIF to LOTW and upload it, and then I will upload to the ARRL(the contest sponsor). When I upload to the ARRL I am certifying the log is true and correct etc etc etc. The last thing I will do is input the ADIF to XMLOG. At this point in time XMLOG will change/modify my log, without my permission. A log which I have certified to be true and correct. Now I get error messages when I try to validate, not because I did anything wrong, because XMLOG changed my log(without asking) and got it wrong. My only response is WOW.

From: Craig Bradley
Topic: 2313 Message: 2328

Hi Mike (W1NR),

Sorry for fragmenting the thread on this, but I wanted to comment on your last sentence. I think that this is an important point.

I agree that I also want to accept the LoTW data, unless I have a paper QSL card in hand that matches the entry in XMLog. In that case, I want the XMLog entry to remain in agreement with the card. This is why I suggest that the validation messages reflect whether or not you have a paper (or previous) QSL for that QSO. You may need that zone, grid, county, state, etc. for an award.

I think that a lot of ops are entering large logs that consist of many years of operation to LoTW. Those logs could consist of operations from many locations if the op has moved during that time frame or operated portable, DXpeditions, etc. The op entering these logs is probably only interested in DXCC credit, so they may not make the effort to establish multiple accounts with the various locations and separate the logs. Those of us that would like to use these QSLs may be interested in other awards.

Therefore I would vote for a warning of some type before you alter a QSO that has been previously confirmed.

73,

When I upload to the ARRL I am certifying the log is true and correct etc etc etc. The last thing I will do is input the ADIF to XMLOG. At this point in time XMLOG will change/modify my log, without my permission. A log which I have certified to be true and correct. Now I get error messages when I try to validate, not because I did anything wrong, because XMLOG changed my log(without asking) and got it wrong. My only response is WOW.

Mal, it appears to me that XM Log adds the zone, computed from the call sign to a country when you save the record. In the case of countries that lie in more than one zone, ie the US, Canada, Australia, Russia and China it cannot compute the zone from country information. In the case of the US or Canada it computes the zone from the state or province if it is entered, either manually or from QRZ.COM if it is enabled. In the other cases it enters a question mark so that you can enter a zone later. If you enter a zone the data you entered will override the computation engine. This is for the regular XM Log. I don't think the LOTW version works quite right at this time.

Subject: Re: [XMLog] Re: bugs up-date and maybe some answers

Hi Mike, W1NR: I am really confused about something you, and others,
said: ""XMLOG might select the wrong zone based on the callsign prefix.
"" I wanted to see for myself this thing about XMLOG filling in blanks,
in particular zones. A day, or so, ago I created a log entry for AE6RR.
I did not enter a zone number. XMLOG did not enter a zone but did
enter a "?". After I read your response I created an ADIF file. Below is
the entry for AE6RR. There is no zone number in the ADIF file for AE6RR.
Here's my question: At what point in time does XMLOG enter the missing
zone number, because I sure don't see it? If I were to convert this
ADIF to a TQ8 and upload it to LOTW it would not have a zone number. I
have thousands of SSCW entries in my log(it's my favorite contest) but
only got 5 or 6 zone error messages from the LOTW report. Why so few error
messages if MLOG is guessing at zones?
I am a big, rah-rah, supporter of LOTW and XMLOG that is why I would
like to see them work together.
Now it's time for me to get ready for SS

There is something that everyone should know about LoTW. These are not "errors" in the sense that it reports a discrepancy. When you log a QSO, regardless of contest or casual operating, state or province and zone information is "guessed" or entered by you into XMLog.

Now the guy on the other end uploads his logs to LoTW and "signs" it with his key. This key puts certain state and zone information into the LoTW record.

When you download a QSL, XMLog correctly tells you that the information doesn't match what is in YOUR log. If the signer doesn't use a key with the correct information or XMLog didn't record the "correct" info you will get a discrepancy.

Zones are not part of the SS exchange, but they ARE part of the LoTW QSL record. XMLog might select the wrong zone based on the callsign prefix. People do move and don't change callsigns. I accept whatever LoTW tells me as that is the only way the QSL will be valid, even if the other end didn't sign it correctly.

Mike, you are correct that the information contained in LOTW will be used if you use the LOTW confirmation for an award. However, LOTW is only used for ARRL awards. Worked all Counties and Worked all Zones are CQ Magazine awards and as far as I know require paper cards. I don't know of any ARRL awards that care about Counties or Zones. Those that are seeking the CQ Magazine awards need to be able to track the information which is shown on a paper card or that the user expects to receive on a paper card. As others have stated, I am a big supporter of LOTW and very glad to have XM Log work with LOTW, but at this time it only works with ARRL awards and EQSL only works wit EQSL awards, so they are limited.

That is of great interest to me Craig and information that I did not know. I am planning on applying for WAZ and soon and that will be helpful. Of course, you can print out only the records that have correct information and either ask the station worked to correct errors or send a paper card for those in error. Of course in most cases you can just use a different contact. Most of the errors seem to be in the Zone 3, 4 and 5 contacts where most of us have dozens or hundreds of contacts.

Joe, I don't think that XMLog will create a Cabrillo file. It is not intended for Contest Logging. A Cabrillo file is just a certain format of a plain text file, so you can probably export a plain text file and modify it with Note Pad or some other text editor. You will need to find the format by downloading a Cabrillo file from N1MM or some other contest program. I can send you a sample if you need it. I have not done a conversion from XMLog so I don't know what is different, maybe the field order and there will be some fields that are in XMLog but not needed for contest submittal. The Cabrillo file has a header with a good bit of contest information that XMLog can't make because it does not have a provision for entering that information or scoring a contest. I make a Cabrillo file for submission and an ADIF file to import the data to XMLog when I enter a contest. I use N1MM for most contests and Win1010 for Ten-Ten contests. I have also used
N3FJP for a Ten-Ten contest.

Am using V496. Have lost the info for creating a text file so that I can change margins on the hard copy. Would appreciate some kind soul helping me out here. This time I will make a copy of the info. (Have tried going to DISPLAY, SHORT and then going to FILE. Can't create a text file this way.)

BTW this logging program works for me when contesting. I make up a file for that particular file or month and when the contest is over splicing the contest info into the main log is a snap. It also works great with LOTW. (If it ain't broke don' fix it.)

I thought that was just Newfoundland, but as I look at the ARRL site I see that NL is for Newfoundland-Labrador. Now I understand why my Zone 2 Labrador contacts keep getting entered as Zone 5. This is another ambiguity where it is near impossible to find the Zone automatically. Newfoundland-Labrador can be separated by VO1/VO2 but VE2 can be either Zone 2 or Zone 5 and VE8 can be either Zone 1 or Zone 2. Another way to make a programmer's hair turn gray or fall out!

Mike,
Now that you've made the LOTW guys happy, any plans to do something
similar for us eQSL folks?

I still prefer to keep eQSL and LOTW seperate from my main log and have three seperate XMLog files (station log with paper QSLs, eQSL and LOTW). Updating to LOTW is easy via ADIF export/import. eQSL can do the same for uploading from ADIF. The options for download with eQSL are a bit more restrictive however, you can download your complete Outbox (what you have uploaded) as ADIFand there is also a link to download your complete Inbox (right at the bottom of the Archive page) but no option to download your non-archived inbox (what you see when you go straight to Inbox.

To get round this problem I have written a little program to produce an ADIF file from my inbox by copying and pasting the browser text of your inbox QSOs into a text file which the program converts. See http://www.davesergeant.com/bbcbasic/bbcbasic.htm and download the eqsladif program.

You will also see another program there, xmlog1, which takes a saved file from your dxcc records and turns it into a CSV file from which you can make a nice spreadsheet of countries worked.

2349. Confirmation of LOTW Verification

Yahoo group: XMLog
Date: 2007-11-12 17:44:17 UTC
From: Kevin Nathan
Topic: 2349 Message: 2349

Hi Mike,

I downloaded all of my LOTW entries and did the verification process. However, when I bring up my DXCC totals, nothing seems to have changed in the confirmed column from the time when I did not run the LOTW version. Can you explain how I determine number confirmed to date including LOTW?

Thanks very much and very 73.

Kevin :)

Work around for Contest Files ... check the following web site for
available contests:

http://b4h.net/cabforms/

(or go to ARRL web site and search on "Cabrillo")

Enter some dummy data to find out the required format for your
contest.

In XMLog, export your contest contacts into an Excel file, then
copy/paste the Excel fields into the required format.

Then you can copy the Excel data and paste into the web page.

The cabrillo form will create a properly formatted cabrillo file.

You can either submit the file to your contest or copy and paste the
newly formatted file into a file that you can submit on your own.

This sounds much more compilcated than it really is. The key to this
process is XMLog's ability to export to an Excel File .... great
feature!

Thanks, Gene.

2352. My howto export from XMLog to Cabrillo.

Yahoo group: XMLog
Date: 2007-11-13 06:56:39 UTC
From: xarero69
Topic: 2352 Message: 2352

Hi all.

I'm being using freeware software adif2cabr.exe from SP7PS.
The process is very easy: you firts generate an ADIF file from XMLog
and later use this program to translate it Cabrillo format.

But I've founded a pair of items that don't work straightforward.

- ADIF files generated by XMLog shows date tags as "<QSO_DATE:8:D>"
instead of "<QSO_DATE:8>".

- ADIF files generated by XMLog shows Test In and Test Out (exchange
data for contests) as "<STX_STRING>" and "<SRX_STRING>" instead
of "<STX>" and "<SRX>".

Now I workaround it using search&replace of the Windows notepad.

Does anybody kwows what it should be according to Cabrillo or ADIF
standards?

Thank you,
Nando EA5GVZ.

2353. Re: [XMLog] My howto export from XMLog to Cabrillo.

Yahoo group: XMLog
Date: 2007-11-13 16:37:41 UTC
From: Dave Sergeant
Topic: 2352 Message: 2353

These are both correct to ADIF2 specs. See http://www.adif.org/

In <QSO_DATE:8:D> the D is an optional field stating the format of
the data field, in this case DATE. Present from v1.

<STX_STRING> and <SRX_STRING> are additional fields introduced in v2
which allow string data rather than just numeric data like serial
numbers.

Do not waste time editing the ADIF, it is fully correct. If your
Cabrillo conversion program does not like it then take it up with the
author of that program.

Realistically though you should be using a CONTEST program for
contests and get IT to produce the Cabrillo for the entry log. Use
ADIF to import it to XMLog. XMLog is NOT a contest program....

Nando, I downloaded a Word file with the ADIF standard from the Internet. Since it is a Word file, it did not print the URL, so you will need to do a Google search on ADIF to find it. The standard shows <QSO_DATE:8> and <STX:#>as you indicate. I see the <QSO_Date:8:D> that you refer to in an ADIF file that I have uploaded to LOTW so it seems that it works. I don't have contest exchanges in my log as I use N1MM for contests. I am not sure if the Cabrillo standard is published. I use N1MM to generate my Cabrillos for most contest and Win1010 for 1010 contests. Maybe Mike will find time to enlighten us on what is going on.

Joe, take a look at N1MM. It is down loadable from the Internet and is shareware, so if you don't like it, nothing lost. I find it easy to use for contests, but don't use all the automatic features that are available. If you do 1010 contests, Win1010 seems to be the most popular. You do have to buy it, but you can download a trial version which will let you log 20 contacts to see how it works. I used CT back in the DOS days and liked it for that era. I think it is updated for Windows, but I have not tried it lately. N3FJP software also works for 1010 but does not have quite as many features as Win1010. I like XMLog for the award and QSO tracking features and it is easy to transfer my contest logs with an ADIF. It is a little more trouble to interface with Win1010 because I need regular 10 meter contacts both places for award tracking.

I am looking forward to the LOTW features of XMLog to be fully functional. I have been tracking LOTW in the notes with manual entries and the new features look very promising for saving a lot of work.

During an "apply to log" any LOTW records that are skipped will not
have and effect on a log record.

> with an asterisk or something.

I assume you're mostly interested in the "Checklist" here. I'm more
or less stuck with the 3-column format. Since I previously required
that the case of the wrk/cnf/out be ignored having "cnf" meaning LOTW
and "CNF" meaning a "real" card received seemed like one way out -
but as you see doesn't let you know if you have both. Another
technique would be to do a log search for records that have the LOTW
date set and the QSL Rcvd date set...

> at once though.

I did consider having "always use LOTW data" and "always use current log data" options but I believe this is too dangerous. I think that most everyone would agree that this problem of resolving conflicts has no good solution. For example, if you picked a "always use LOTW data" option that WAS card that you submitted long ago and received credit for could get its' state changed. Now you might say that the option wouldn't be enforced if the record had the WAS accepted field set but I think this is getting a bit too subtle. And also, to make things more confusing I suspect you would get credit for that second state noted in the LOTW record if you did a LOTW WAS submission!

> The log entry screen looks nice, I like the design, however I have
> a problem with the form factor; the window is too wide.

I did a fair amount of diddling of the fields layout and decided to go with a wider window. I couldn't really go with a taller one because the window can already grow pretty tall if you choose one of the "always show xxx fields" options.

> The questionable stuff is I got 65 errors when trying to validate from LOTW. Not a 1 of those errors means anything to me. I.E. VY1JA: I logged NT and LOTW logged YT. I don't care about it, but unfortunately the program says it won't/can't validate until I resolve those errors. I have uploaded 15,000 QSO and had 65 errors. Not one of the errors is meaningful and even worse some of them are not resolvable. I.E. 3 of the Q's have a county error from different State QSO parties. The error from LOTW said the county doesn't exist even though I logged it correctly because there was a match. I think we need another button that says "I don't care"....hihihihihi

I think that this is going to be the biggest problem with LOTW support, how do you deal with conflicts? Since there's no way that XMLog can automatically make the correct choice the user is going to be stuck with the decision. And like I mentioned before there are going to be times when there is no "right" choice, e.g. when you have a real card-in-hand that says one thing and LOTW says another.

Another weird case for WAS is when you do a LOTW WAS submission and get credit for some QSO and then the guy says "oops I submitted those old QSOs using my new location" and then updates the QSOs. Do you think that you'll lose credit? Not likely...

XLMog has always done zone fill-ins based on the state/province or DXCC country (if the country only has one zone) and this feature has always been appreciated for manual or ADIF imports. If the state/province or country is correct, the zone will be correct.

If this is really a problem then I suppose I could always include a "disable zone fill-ins" option.

Hi Mike: It's not a problem with DX countries only with USA contacts. I had at least 3 or 4 QSOs, this year during sweepstakes, with W6's somewhere back east. When I try to update/validate I will get those as errors. In my case I really don't care if those Q's have the right zone or not. If I were to ever apply for 5 BandWAS it wouldn't matter what the zone is.
That is why I suggested the 'I don't care' button. Additionally since there are thousands of active hams in the USA zones once you get one or even one per band the rest don't matter.
Just my -2cents worth.
Thanks & 73

window to fit on the screen. I deleted the contest windows and that
helped some, but I still can't see the bottom where it tells me how
many contacts are selected and I use that a lot with a log of about
13,000 QSOs.

What do you have your screen resolution set to? Do you have any of
the "always show xxx fields" log window options set?

I was using 1024 X 768. I am now using 1152 X 864 and that solved
my problem. I did have some always show fields set and was not very
aware of the implications of that. I understand it better now and can do
a better job of selecting my options.

> 2. When I make an ADIF file to upload, I don't see the option to
set LOTW sent to current date.

This feature is on the "to do" list...

> 3. When I download and merge, the LOTW received date does not
update.

The current prototype mostly demonstrates the "look and feel" of a
future version. It doesn't actually add any new fields to your log
files so that means that the data doesn't get saved.

I like the look and feel. I was not aware that it would not save the data
and expected it to save it. I look forward to the day when it will save the
data. My work around to record the LOTW data in the notes field is a
real time consumer and not very satisfactory.

> 4. When I update the LOTW received date manually for one record,
it shows that date in all records.

Try the latest version posted at www.xmlog.com/lotw and let me know
if you still see this problem.

I tried it on the version from last Sunday and it is still there. I can't tell if
it records the date in every record or just the ones selected because it
does not save any of the data.

> 5. When I merge LOTW downloaded data and it does not like the
County, I need a drop down window to pick an acceptable county. It
is real picky, like when you leave out the hyphen on the Alaska
counties that have a hyphen, it rejects them.

OK - I'll check this out...
The same drop down that is in the County block of the entry screen will
be great.

> 6. The county data base does not include the several
city/counties, such as Virginia Beach City, VA and St. Louis City,
MO. This goes back to the old program, but now it stops you when you
are merging and the only way around that I found is to enter some
wrong county. It will not even let you pass by trying to delete the
county entirely.

I'll check this out as well...

Mike - W1ECT

Keep up the good work. I know it is a real chore to fix all these bugs, but
it will be a great addition to the program.

Mike - W1ECT
When the LOTW entry is wrong you have the same options that you do
when you get a QSL card that is not properly filled out. Either contact
the person who sent the confirmation and get a corrected confirmation
or work a new contact and hope the person contacted will confirm
properly. There is just so much that a logging program can do for you!

The option of overriding the Zone seems good enough for me and it is
there now. The only place that it seems to be a problem is in Canada
where VO1 is in Zone 5 and VO2 is in Zone 2 but the ARRL Section is
NL for both. VE2 can is usually in Zone 5 but can be in Zone 2 and the
only way to know is call by call or user input. VE8 can be Zone 1 or Zone 2
and as far as I know can only be user input. Russia is pretty hard to sort out.
VK6 is Zone 30 and the rest of VK is Zone 29 so could be sorted by call.
I am not sure how to sort China between Zone 23 and 24.

Since CQ can't access LOTW for the WAZ award, an CQ Zone error in LOTW
should not be a great concern. You will have to get a paper QSL that shows the
correct Zone. Most of the LOTW Zone errors that I saw were in Zones 3,4 &5
with a couple in Zone 14. That shouldn't be a problem for anyone.

Thanks for the reply Mike. Take a look at the following:
http://en.wikipedia.org/wiki/List_of_counties_in_Virginia
I remember looking and not finding St. Louis City, but I don't remember which version of the program I was using at the time. It really doesn't matter too much to me because I am not a county hunter but when I tried downloading and adding the LOTW information I found myself in a position where I had logged Virginia Beach City for the county, LOTW had Virginia Beach City for the county and XMLog would not accept it. The only way I could get past the problem was to enter a listed county of Virginia which was wrong. The County Hunter Net web site lists the county for Virginia Beach as City of Virginia Beach. This is the URL http://www.naco.org/Template.cfm?Section=Data_and_Demographics&Template=/cffiles/counties/citiesstateall.cfm

There should not be any traps in the software that you can't get around by entering what you think is correct or leaving the block blank. As far as I have experienced there are none of these situations in the published XMLog, but there are some in the LOTW prototype which I think need to be eliminated.

Keep up the good work, Cookie

Thanks Mike, that is a step forward. I am not into county hunting, so I really don't care a lot what counts for the award, but would like the correct legal information or nothing at all in the block instead of something that is incorrect.

When do you anticipate that the blocks will be available for logging data. Even it it is only manually it would be a big help to have a way to record the LOTW confirmation.

> if you still see this problem.

I tried it on the version from last Sunday and it is still there. I
can't tell if it records the date in every record or just the ones
selected because it does not save any of the data.

2388. LOTW Returns

Yahoo group: XMLog
Date: 2007-11-20 17:09:12 UTC
From: WILLIS COOKE
Topic: 2388 Message: 2388

My results with LOTW are not so good. I have 12,972 QSOs entered and 1,232 QSOs confirmed for 9.5%. Approximately 8,000 of my QSOs are from the 1988-1993 period when I was active and the other 5,000 are from the most recent 14 months. The confirmation rate from the recent contacts is considerably better than the older contacts. I work a lot of DX and the confirmations from USA contacts are much higher than DX.

I am not sure why there is interest in EQSL. My understanding is that ARRL and CQ will not accept EQSL confirmation for their awards. LOTW is at least good for DXCC, Challenge and WAS awards. I have been told that CQ will accept a printout for their awards, but I have not confirmed that. I am not sure what RSGB will accept for IOTA. I think that EQSL sponsors their own awards. Is anyone working for the EQSL awards? Am I missing something that makes EQSL attractive to some?

Cookie, K5EWJ

As an active user of eQSL and a less active user of LOTW.....

It depends what you want to do with QSLs (paper or otherwise). I have long ago obtained DXCC in my QRO days, and ARRL do not offer a formal QRP version (only a gimmicky certificate that you do not need cards for at all...). Since LOTW at the moment can only be used for DXCC and WAS (for which I have zilch interest) it does nothing for me except a mechanism to verify that my QSOs were valid ones. In any case I no longer chase awards at all.

eQSL offers the same, confirmation that a two way QSO took place, and it can also be handy after a contest or at other times to show that you mistyped a callsign and similar (for which LOTW doesn't help as their checking is more rigorous). I have for what it is worth obtained their eDXCC certificate, it is right that it counts for virtually nothing else but as I said that is immaterial to me. But you do get actual QSL cards, admittedly somewhat bland and non original, which you don't get at all in LOTW.

They are two somewhat different systems serving different needs and it is right that they should both be supported. Whether as LOTW takes off and gets accepted for more awards eQSL bites the dust remains to be seen.

2390. Re: [XMLog] Re: XMLog LOTW Prototype - Manual date updates

Yahoo group: XMLog
Date: 2007-11-20 18:07:17 UTC
From: WILLIS COOKE
Topic: 2286 Message: 2390

Mike, I load the XMLog-LOTW. I select K5FP for whom I have 18 entries. When I double click in the LOTW sent or the LOTW received block, I expect today's date, but I get nothing. If I select modify, same thing. If I enter a date in either block it fills that date into all 18 entries. If I go to a different block and enter a date in the other block it fills the block with that date for all entries. If I delete the date in a block for any entry, same or different from where I entered it, the date is deleted for all blocks. Of course, it may be entering it for all contacts in the data base, but since it does not save this data, I can't tell. All the entries go away when I make a different selection. I am using the version that you released a week ago Sunday. I have not downloaded the latest version yet. I am using XP Professional on an older 586 CPU computer.

Subject: [XMLog] Re: XMLog LOTW Prototype - Manual date updates

Hi, Cookie, I'm bot sure what you're doing to create this problem.
Here's what I tried:

1) Select some records
2) Double-click on the LOTW Rcvd field to set the date to today
3) Scroll forward to the next record

and it clears the field OK. Can you tell me how to duplicate the
problem here?

Mike - W1ECT

>> 4. When I update the LOTW received date manually for one record,
>> it shows that date in all records.

> Try the latest version posted at www.xmlog.com/lotw and let me know
> if you still see this problem.

I tried it on the version from last Sunday and it is still there. I
can't tell if it records the date in every record or just the ones
selected because it does not save any of the data.

From: pa4doc
Topic: 2391 Message: 2391

Hello Mike and others.

Today I hooked up an amplifier in my system wich uses CAT
to switch bands.
Well....it doesn't.
What I don't understand is that it works flawlessly with N1MM logger.

Same setup / different program.

Is there a fix for this Mike?

Mike at what point in time will I get a message that says the validation process was successful.?.?. I have checked the include box for all errors, now including the counties. I still get a screen at the end showing there were still unresolved errors. For whatever it is worth those unresolved errors 'do-not' count for any ARRL awards.
Thanks in advance Mike.

I've posted version 4 of the prototype at www.xmlog.com/lotw - this version will let you enter anything (include a blank field) so you can get by those cases where the LOTW county data isn't recognized by XMLog and the data in the log file is also not considered a legitimate county.

If you enter a 'bad' county a later "Awards/Counties/County Validation" will discover it.

Topic: 2395 Message: 2396

Hi Joe,

You probably do not have the serial parameters setup to match baud rate, etc.

On the TS-2K goto menu 56 and select 19200.

In XMLog:

Options/HF Rig Port Select

Set default for = Kenwood TS-2000

Comm Port = (the port that you are using, this is probably correct as you are getting something)

Baud Rate = 19200

Data Bits = 8

Stop Bits = 1

Flow Control = None

Parity = None

Data Mode = Data/FSK

Options = RTS Always On

That is how mine is setup.

Good luck & 73,

- Craig, AE6RR

From: Mike McAmis
Topic: 2286 Message: 2397

I've posted version 6 of the prototype at www.xmlog.com/lotw - this version includes more changes for LOTW county validation.

When validating counties "near" matches are now ok (for example: St. xxx, St xxx, and Saint xxx).

The final value selected does not have to be a legal county. This is consistent with what happens when you enter the county when creating a new log entry. We assume you will eventually do a "Awards/Counties/County Validation" to catch any bad county entries.

The "conflict resolution" prompt for counties now includes a "select county from list" button.

He
llo Mal,

Can you describe the setup you tried to explain?
Everything is hooked up according to the manuals.

If you have read my post you see that N1MM works great.
It controls the rig and the amp switches flawlessly.

XM-LOG does not behave like N1MM does in controlling the CAT.

Brands of the used equipment is not important because the standard
is known. If you have a 100 Base-T network with a protocol problem
it's obvious it doesn't matter if you have a HP or Dell pc.

Yes Wilko the brands are important. Sometimes parameters are different within different programs. I know it is not supposed to be that way but sometimes it is. It is also important if you are using ICOM.
Try writing the settings down from the configure menu in N1MM and then make sure they are the same in the ports options in XMLOG.
Computers are funny animals. You would think because they are computers they always all work the same way all the time. We have all learned the hard way they don't always work the same.
Good Luck

Hello Mike,

I understand your comment but can you explain why XM-LOG
does not function equal to N1MM contest SW.

I have hooked it up the right way but I can't get the TRX follow
a command(mouseclick) using the spots map.
The rest works as normal.

It has something to do with connecting the CAT TX line into the cicuit.
When it is not connected XM-LOG behaves like normal.
I need it to be connected to let the amplifier follow the TRX
That works in N1MM.

It's frustrating because that's the only thing what fails.

Tell me what more info you need please.

Michael!!

I think I have figured it out, but I need your programming skills.

Is it possible to send a 'ask frequency from trx' command AFTER
clicking on a spot 'set transceiver to spot freq.

That must be the case IMHO the fact that N1MM displays the
VFO data nearly in realtime must be the reason that it works with
that SW.

Best regards,

Wilko

Topic: 2391 Message: 2410

Craig it doesn't do it with my radio. If I want it to read the freq from my radio I have to right click on the freq field and then click on get freq from radio. XMLOG does not poll my radio. That's the big difference between XMLOG and N1MM. I think that is part of the problem Mr. Wilko is having. When I use N1MM or CT during contests the 'CAT' light on my radio is lit. It is never lit with XMLOG. My radio is a MKV.

If you do an Edit/Add New Entry, XMLog reads the frequency from the rig.
Does that control your amplifier?

Michael!!

I think I have figured it out, but I need your programming skills.

Is it possible to send a 'ask frequency from trx' command AFTER
clicking on a spot 'set transceiver to spot freq.

That must be the case IMHO the fact that N1MM displays the
VFO data nearly in realtime must be the reason that it works with
that SW.

Best regards,

Wilko

2415. RE: [XMLog] Re: strange CAT behavior

Yahoo group: XMLog
Date: 2007-12-15 18:19:13 UTC
From: Craig Bradley
Topic: 2391 Message: 2415

That is what I was thinking about. Writelog does the same, it polls the radio. When you start a new QSO entry, XMLog reads the frequency, mode, etc. from the radio also. I saw suggesting this as a test to see if it produced the desired result.

A nice feature for XMLog would be to have an option to poll the radio as the contest loggers do. It could also put a cursor on the band map to show the current tuned frequency like Writelog does. It could also update the information in an open "add new QSO window". Of course, this would have follow after Mike finishes LOTW.

From: Mike McAmis
Topic: 2391 Message: 2416

Hi - Most contesting programs constantly poll your radio(s) so that they can maintain a real-time frequency/mode display. Since XMLog doesn't provide a live display no polling is required.

It seems that the way most radios and amps are going is for the radio to provide 'band data' that can be used by an amp (or any other purpose). The advantage of this system is that you don't have to be running any program to have the amp track the radio's band changes or even have your PC powered up...

I haven't been paying attention to how different manufacturers have been implementing these 'band data' schemes - hopefully some standard will emerge.

Mike - W1ECT

Hi - I just got the note about St. Barthelemy this evening and I've posted a new XMLog version (5.43)in www.xmlog.com/beta

This version also includes all the non-LOTW related changes that were made to the LOTW prototype version.

I'll have to make another version of the LOTW prototype to match this version 5.43 - I should have it ready tommorrow.

Mike - W1ECT

2423. RE: [XMLog] 5.43 Install Problem

Yahoo group: XMLog
Date: 2007-12-21 04:30:18 UTC
From: Craig Bradley
Topic: 2422 Message: 2423

No, I installed 5.43 last night with no problems.

I installed on a system with XP, service pack 2 and all current updates from Microsoft.

During the install, the installed complained that one file on my machine was newer than the one that was being installed and ask if I wanted to keep the current file. I said yes and the install completed with no problems and runs good (I now see FJ/OH2AM in red on the band map).

You might want to go to Windows Update and install the latest patches and try it again.

Good luck & 73,

- Craig, AE6RR

Subject: [XMLog] 5.43 Install Problem

When installing 5.43 I get an "Setup cannot continue because some files are out of date on your system" error. I am currently running 5.42 with no problem. Anyone have this problem?

Dom - N3DD

Hi Craig

I'm also running XP Pro SP2 with all the current updates. So this morning I double checked that all updates were installed then downloaded 5.43 agsin. I got the same error message again but this time when it asked me if I wanted to update the installer and said yes it apparently did. (Before it would just continually give me the error message). The install continued and asked me about the newer file you stated below then completed without a problem. Now my two FJ QSO's show up just fine.

All's well that end's well I guess!

73 and Merry Xmas

2427. Com Port for Keyer

Yahoo group: XMLog
Date: 2007-12-22 00:17:37 UTC
From: WILLIS COOKE
Topic: 2427 Message: 2427

My WinKeyer USB quit working. I tried messing with the USB expander because I thought that was the trouble, but it turned out to be that the batteries in the WinKeyer needed changing. When I got the Keyer working again, I am unable to get XMLog to recognize it. The trouble seems to be that with my unplugging and replugging the expansion USB ports my WinKeyer has changed from Com4 to Com13 and XMLog will only go up to Com8. I have not been able to reconfigure my USB port to a Com port that will fit XMLog. Does anyone know what to do about this?

When I built my WinKeyer the instructions said to expect the batteries to last about 3 years. Mine last about 6 months, but I do send a lot of CW in 6 months.

Thanks, Cookie, K5EWJ

To: XMLog@yahoogroups. <mailto:XMLog%40yahoogroups.com> com
Subject: [XMLog] Com Port for Keyer

My WinKeyer USB quit working. I tried messing with the USB expander
because
I thought that was the trouble, but it turned out to be that the
batteries
in the WinKeyer needed changing. When I got the Keyer working again, I
am
unable to get XMLog to recognize it. The trouble seems to be that with
my
unplugging and replugging the expansion USB ports my WinKeyer has
changed
from Com4 to Com13 and XMLog will only go up to Com8. I have not been
able
to reconfigure my USB port to a Com port that will fit XMLog. Does
anyone
know what to do about this?

When I built my WinKeyer the instructions said to expect the batteries
to
last about 3 years. Mine last about 6 months, but I do send a lot of CW
in 6
months.

Thanks, Cookie, K5EWJ

Hi Dom - Another XMLog user had a problem with the installer and it turned out that there is a problem with the 'dependencies' information for a file named scrrun.dll Microsoft has a program to fix this problem but it's easier to delete the bad file (c:\windows\system32\scrrun.dep). Search the archives here for scrrun for more info.

For those with a short memory like me the URL to the LOTW prototype is
www.xmlog.com/lotw
The URL below will get you XMLog 5.43

Hi Mike

Thanks for the info. For me it was "safer" to run the MS patch!!
Hopefully that will take care of future problems.

Hi Wayne - I could not duplicate your problem here. I've also worked FJ on 40/20/17 and the Mixed, CW, and band totals seemed to have been incremented ok. I assume your FJ QSOs also show up on the DXCC/Checklist report as "worked".

I don't have any ideas on what might be happening. One thing you might try if you have some time is to make a copy of your log file, open that file, make a DXCC/Totals report (and leave it on the screen), delete the FJ QSOs, make another DXCC/Totals report and compare it to the previous one. If the "worked" count doesn't decrease something very strange is going on.

Wayne didn't say how many countries he has. One thing that could cause the problem is if he does not have another QSO with FS. Then the program would add FJ and delete FS when he made the change.

2450. RE: [XMLog] Com Port for Keyer

Yahoo group: XMLog
Date: 2007-12-23 18:03:04 UTC
From: Craig Bradley
Topic: 2427 Message: 2450

I believe that you can get USB printer interfaces. Whether or not they will work for keying is a good question. If they do, there may be delays which would result in poor CW keying.

I would recommend a USB keyer such as the microHAM microKEYER, they send excellent CW. You also get a serial port to control your rig, sound card interface, RTTY keying, rig T/R keying and amplifier keying. There are other units that just do CW keying.

Also, you can add as many USB to serial converters as you want. I found some for $17 each.

Good luck, Happy Holidays & 73,

Subject: Re: [XMLog] Com Port for Keyer

Thanks Craig. I found that, but all the ports said that they were in
use and
I got a bunch of dire warnings. I finally picked a port and tried it.
Of
course, it worked, but I wasn't certain that Bill Gates wouldn't pop
out of
my screen and try to beat me up! (G) Before that everything that I
tried
raised my port up 4 numbers. I thought for a while that I would have to
buy
a new computer, or at least reformat my hard drive to get back below
Com 8.
I have only been using a PC since 1980 so I guess I am still a Newbie.

Subject: [XMLog] Com Port for Keyer

My WinKeyer USB quit working. I tried messing with the USB expander
because
I thought that was the trouble, but it turned out to be that the
batteries
in the WinKeyer needed changing. When I got the Keyer working again, I
am
unable to get XMLog to recognize it. The trouble seems to be that with
my
unplugging and replugging the expansion USB ports my WinKeyer has
changed
from Com4 to Com13 and XMLog will only go up to Com8. I have not been
able
to reconfigure my USB port to a Com port that will fit XMLog. Does
anyone
know what to do about this?

When I built my WinKeyer the instructions said to expect the batteries
to
last about 3 years. Mine last about 6 months, but I do send a lot of CW
in 6
months.

Thanks, Cookie, K5EWJ

2451. Re: Ver 5.43 And Award Tracking Problem

Yahoo group: XMLog
Date: 2007-12-23 18:45:19 UTC
From: k9mrd
Topic: 2441 Message: 2451

Mike & Willis,

I do have other FS contacts in the log which are still there and working correctly.

The FJ QSO's are in all reports including the 'Checklist'. In my troubleshooting before my post I simulated your test Mike, but in a different way. I ran the DXCC/Totals report and moved it to the side. Then I ran a search for contacts prior to 12/19/07 which was the date of my first FJ contact. I verified that there were no FJ's in the selected group then ran the DXCC/Totals report by selecting 'Use Currently Selected Entries' option. The two reports are the same. Mixed, Phone, CW and band totals did not change.

I should mention, all of the FJ contacts were made before I downloaded and installed Ver 5.43.

Isn't my test the same as your suggestion Mike? Should I delete and repost the QSO's, reinstall 5.43, or could there be another problem?

(Is there a problem with the DXCC/Totals Report when using the "Use Selected Entries" option?)

Thanks for your help!

Wayne

Problem Fixed!

I removed and reposted the 3 QSO's and now everything works. I don't know why, but the totals are now correct.

Thanks for your help.

2453. Re: [XMLog] Re: Ver 5.43 And Award Tracking Problem

Yahoo group: XMLog
Date: 2007-12-23 18:58:06 UTC
From: WILLIS COOKE
Topic: 2441 Message: 2453

Wayne, did you go back to the FJ contacts and change the country? You have to do that manually for contacts that were in the log prior to switching to 5.43. Version 5.42 would not let you put in St. Barts for FJ. Version 5.43 will identify FJ as St. Barts only for contacts entered after switching.

2454. Re: [XMLog] Com Port for Keyer

Yahoo group: XMLog
Date: 2007-12-23 19:06:50 UTC
From: WILLIS COOKE
Topic: 2427 Message: 2454

Craig, I am using a WinKeyer USB for the interface. It accepts an ASCII signal from the computer when a message is entered by the logging program either from the keyboard or an F key. XMLog and N1MM both support this interface. My problem was that the batteries in the keyer ran down, but I thought that the Belkin USB expansion port was the problem. I unplugged it and plugged it back in. When I did, it incremented the Com port number to a number higher than Com 8 and I couldn't access it from XMLog. When I looked in Device Manager it said that all the ports up to the one assigned were in use. When I started to change the port to a lower one I got some severe warnings not to do that. I finally decided to change the port anyway and ignore the warnings. That worked. I still don't know how to get the port number counter reset. I have not tried unplugging the expander then deleting the driver and rebooting. That might work. The Windows Help File
is no help at all with this situation.

Subject: RE: [XMLog] Com Port for Keyer

I believe that you can get USB printer interfaces. Whether or not they
will
work for keying is a good question. If they do, there may be delays
which
would result in poor CW keying.

I would recommend a USB keyer such as the microHAM microKEYER, they
send
excellent CW. You also get a serial port to control your rig, sound
card
interface, RTTY keying, rig T/R keying and amplifier keying. There are
other units that just do CW keying.

Also, you can add as many USB to serial converters as you want. I
found
some for $17 each.

Good luck, Happy Holidays & 73,

- Craig, AE6RR

Subject: [XMLog] Com Port for Keyer

My WinKeyer USB quit working. I tried messing with the USB expander
because
I thought that was the trouble, but it turned out to be that the
batteries
in the WinKeyer needed changing. When I got the Keyer working again, I
am
unable to get XMLog to recognize it. The trouble seems to be that with
my
unplugging and replugging the expansion USB ports my WinKeyer has
changed
from Com4 to Com13 and XMLog will only go up to Com8. I have not been
able
to reconfigure my USB port to a Com port that will fit XMLog. Does
anyone
know what to do about this?

When I built my WinKeyer the instructions said to expect the batteries
to
last about 3 years. Mine last about 6 months, but I do send a lot of CW
in 6
months.

Thanks, Cookie, K5EWJ

Date: 2007-12-24 01:01:26 UTC
From: Craig Bradley
Topic: 2427 Message: 2456

Try: http://www.microham-usa.com/

The USB Interface II and USB CW Keyer start at $169.

There are also others. I like the microHAM software, the USB Router gives you a lot of control.

Have fun & 73,

- Craig, AE6RR

I believe that you can get USB printer interfaces. Whether or not they will work for keying is a good question. If they do, there may be delays which would result in poor CW keying.

I would recommend a USB keyer such as the microHAM microKEYER, they send excellent CW. You also get a serial port to control your rig, sound card interface, RTTY keying, rig T/R keying and amplifier keying. There are other units that just do CW keying.

Also, you can add as many USB to serial converters as you want. I found some for $17 each.

Good luck, Happy Holidays & 73,

TRSDOS

That's where I started also with a 4K TRS80 and a tape drive.

Anyway, keep poking around at that COMM port, maybe you can delete the
COMM
port (with the USB device unplugged), reboot, reconnect, etc. and get
it on
the desired port. I had to try mine a couple of time before I got it

to
"take". It kept complaining that the port was in use.

Good luck,

2458. Re: Ver 5.43 And Award Tracking Problem

Yahoo group: XMLog
Date: 2007-12-24 04:05:00 UTC
From: k9mrd
Topic: 2441 Message: 2458

Yes, I had already changed the country code to FJ. I did that after I updated the version to 5.43. The FJ QSOs would have not been in my Award reports under St. Bart if they were incorrect. As I mentioned, everything was correct except the counters. Deleting the 3 QSO's and re-entering them fixed the problem.

I have written a lot of commercial SW over the years and seen some strange things happen....I really don't understand this one, but it now is correct so I am not going to worry about it!

Thanks for your help. I sure appreciate it!!

Wayne

--- In XMLog@yahoogroups.com, WILLIS COOKE <wrcooke@...> wrote:
>
> Wayne, did you go back to the FJ contacts and change the country? You have to do that manually for contacts that were in the log prior to switching to 5.43. Version 5.42 would not let you put in St. Barts for FJ. Version 5.43 will identify FJ as St. Barts only for contacts entered after switching.

2459. Re: Com Port for Keyer

Yahoo group: XMLog
Date: 2007-12-23 21:49:53 UTC
From: Richard Ferch
Topic: 2427 Message: 2459

From what I have read, USB printer interfaces are no good for CW/PTT keying because they do not give bit- or pin-level access to the port, only character-level access for sending complete characters to the printer. Bit-level access is necessary for CW keying.

The microHAM CW interfaces contain a K1EL WinKey chip, so you need to set the CW Port/Keyer type to WinKey with them.

The original K1EL WinKey should work fine through a USB-to-serial adapter, or you can now get a USB version of the WinKey from K1EL with a serial port adapter built in.

The advantage of WinKey-based keyers over PC-generated CW (whether on a parallel, serial or USB-to-serial port) is that the WinKey is almost immune to the "stuttering" often observed with PC-generated CW, which is caused by other asynchronous processes taking over your CPU. With the WinKey, your PC sends a string of ASCII characters to the device and the actual keying is done by a dedicated processor in the WinKey.

2460. Re: LOTW

Yahoo group: XMLog
Date: 2007-12-23 23:22:21 UTC
From: Richard Ferch
Topic: 711 Message: 2460

On the subject of the LotW prototype, there is a bug in the LotW validation related to date formats.

I have my log set to display in DD/MM/YY format. When I downloaded from LotW, the only records that were recognized were: (a) those with identical DD and MM (e.g. 08/08/99); and (b) those where DD was greater than 12, i.e. where it was impossible to confuse the day and the month. All other records were rejected as not in log, even though they actually were in the log. This resulted in more than half of my LotW confirmations being rejected during validation (8013 confirmations rejected out of 15407).

BTW, the download status indicator stopped working partway into my download from the LotW web site. The progress indicator stopped working after 300+ kB or so out of a 3.9 MB download.

Under normal conditions, the "Not in Log" response should be very unlikely. If another station uploads a QSO to LotW and you have not uploaded a matching QSO, you will never see the QSO from the other station - unlike cards and eQSL, LotW gives you no way to see non-matching QSOs. The only way a "Not in Log" response should be possible should be one of: (a) data corruption during the download; (b) you have uploaded a QSO to LotW that was matched by the other station and you subsequently either deleted the contact from XMLog or edited the call sign, date, time, band or mode in XMLog in such a way as to invalidate the initial match; or (c) you have uploaded a QSO from some other program and you never imported it into XMLog.

Likewise, the "Bad Data" response should be impossible unless the download from the LotW web site was corrupted.

Regarding the algorithm used to match LotW records to records in your log: According to the XMLog prototype documentation, the call will match anything that contains the same "root" call. However, the download from LotW should only contain exact matches unless you have edited your log after doing the upload to LotW. Any difference, no matter how small (e.g. VE3KI/3 vs. VE3KI), will cause a failure to match in LotW and you will never see the record uploaded by the other station. As for the time difference, the time in the ADIF file downloaded from LotW is the time you recorded when you uploaded the QSO, not the time recorded by the other station, so the only way that can fail to match is if you have edited the time in your log after uploading to LotW.

Regarding the proposed features in the documentation:
Exporting the LotW and eQSL sent and received dates as XMLog-specific

ADIF fields (APP_XMLOG_LOTW_SENT, etc.) appears to be the appropriate way to deal with these fields. These should work the same way as the current QSL fields, i.e. a "?" can be used instead of a date if the date is not important to you.

The proposal for options to set LotW sent or eQSL sent fields to the current date during ADIF exports seems reasonable, except that this should not be an "or" operation (radio button) - it should be an "and" operation (checkboxes), so that you can select none, one or both of them. People uploading to both LotW and eQSL will want to use the same ADIF file to upload to both (LotW requires the additional step of signing with TQSL, of course).

The documentation suggests that eQSL sent and received fields can only be set manually. Actually, eQSL sent should work the same way as LotW sent, i.e. either manually or automatically. eQSL also offers an ADIF download capability, so eQSL received should also work similarly to LotW received.

A feature I'd like to suggest is that XMLog could remember the date of the last downloads from LotW and eQSL and use the applicable date as the default for the "posted since" date. In order to avoid gaps, confirmations on the "posted since" date should be included in the download, which means there will be some overlap. The overlap can be reduced by specifying not only the date but also the time (hh:mm), although there will still always be at least one overlapping QSO.

Regarding the checklist reports, the proposal is to use CNF for cards and cnf for LotW-only confirmations. This effectively gives priority to cards, i.e. if you have a card there is no quick way to see whether you also have a LotW confirmation. For people assembling applications to the ARRL DXCC desk, this priority is the reverse of what is wanted, i.e. you would normally want to use LotW confirmations first, and only send a card to the DXCC desk if you do not have a LotW confirmation for that country-band or -mode combination. Therefore I do not think that the proposed method is optimal. I would prefer to be able to see all three modes of confirmation at once (e.g. C for card, L for LotW and e for eQSL, with combinations like CL, Le, Ce, CLe also possible).

I would also suggest that an option to allow data from LotW to automatically overwrite what is already in the log would be a bad idea. That would result in a large number of incorrect zones (swapping CQ and ITU zones in the location data appears to be a common error). Also, QTH-related information recorded during the QSO is almost certainly more accurate than information later uploaded to LotW or eQSL, especially in view of the fact that many people seem to prefer to sign uploads with their current address instead of the address during the QSO.

In my test download of 15407 confirmations, I had 256 conflicts, and apart from a few obvious typos, after checking each one individually I decided in nearly every case that the data in my log was more likely to be accurate than the data recorded in LotW. (e.g. I worked a station

during the ARRL November Sweepstakes, the exchange I recorded was NH, the other station's results were listed under NH, my error file from the ARRL does not indicate an error in logging this QSO, and yet the LoTW record says MA because that happens to be where his home address is - would you change NH to MA in your log on the basis of the LotW confirmation? I certainly wouldn't.)

It is not particularly difficult to use the "location" feature of TQSL to sign QSOs from different locations correctly, but nevertheless a lot of people apparently do not know how or do not bother to use this capability. This is even more true of eQSL, since it is considerably more difficult to manage multiple QSOs with the same call sign in eQSL. Particularly if a download from eQSL is done months or years after the QSO, there is a not insignificant likelihood that the location data (state, county, grid) is wrong.

2461. Re: [XMLog] Re: Com Port for Keyer

Yahoo group: XMLog
Date: 2007-12-24 16:50:36 UTC
From: WILLIS COOKE
Topic: 2427 Message: 2461

Though I have not tried it to see for myself, I understand from reading several sources that pin level connection to a port does not work will with Windows. The timing and sharing built in to Windows does not allow the proper timing of cw keying from the pin as it did in the DOS days. This is especially true for higher CW speeds and when you are doing a lot of multi-tasking. Today's logging programs do a lot of multi-tasking even when you are not running email and other programs. A smart keyer that can accept ASCII to transmit and cache it until timing is right is required. WinKeyer USB is one device that affords this capability. No doubt there are many others, but I have not attempted to become familiar with them.

Subject: [XMLog] Re: Com Port for Keyer

From what I have read, USB printer interfaces are no good for CW/PTT keying because they do not give bit- or pin-level access to the port, only character-level access for sending complete characters to the printer. Bit-level access is necessary for CW keying.

The microHAM CW interfaces contain a K1EL WinKey chip, so you need to set the CW Port/Keyer type to WinKey with them.

The original K1EL WinKey should work fine through a USB-to-serial adapter, or you can now get a USB version of the WinKey from K1EL with a serial port adapter built in.

The advantage of WinKey-based keyers over PC-generated CW (whether on a parallel, serial or USB-to-serial port) is that the WinKey is almost immune to the "stuttering" often observed with PC-generated CW, which is caused by other asynchronous processes taking over your CPU. With the WinKey, your PC sends a string of ASCII characters to the device and the actual keying is done by a dedicated processor in the WinKey.

2462. Re: LOTW

Yahoo group: XMLog
Date: 2007-12-24 17:16:44 UTC
From: Mike McAmis
Topic: 711 Message: 2462

Hi Rich...

Since there are a lot of subjects here, when responding please start a new thread like "LOTW Prototype - Exact call matches" for each subject.

> On the subject of the LotW prototype, there is a bug in the
> LotW validation related when the date format is set to display
> in DD/MM/YY format.

OK, I'll check this out.

> BTW, the download status indicator stopped working partway
> into my download from the LotW web site. The progress
> indicator stopped working after 300+ kB or so out of a
> 3.9 MB download.

I see that occasionally here as well. Unfortunately there seems to be a bug in the Microsoft control I'm using for the transfer and it's not likely to be fixed.

> Under normal conditions, the "Not in Log" response should be very
> unlikely.

Not so unlikely - all you have to do is enter type in a QSO with a bad call, date, time...

Bad data errors are also not impossible since LOTW does not do a format check on some of the fields you enter when defining your station info. Format errors can also occur because LOTW does not verify the format of all the LOTW fields so if some logger creates an ADIF file with poorly formatted data it doesn't get checked/rejected when you upload it to LOTW.

Regarding "exact call matches". Again, it's possible that you entered HP2/W1ECT in your log because that's the call the guy was using on the air but when he uploaded the LOTW info he might have used W1ECT/HP2. I've got some QSOs like this...

Regarding LOTW date tags. For LOTW, if you've got a field like QSL RCVD set to ? XMLog will just set the QSL_SENT tag to Y and not provide a QSL_SDATE tag. Similarly on an import a QSL_SENT tag without a corresponding QSL_SDATE will set the field to ?.

Regarding eQSL's - I'm not including more support since they don't count for any awards of interest to me. The only reason I included the fields is so that folk could record the info and then switch to some other logger later (assuming that ADIF ever officially supports

an eQSL field).

> Regarding the checklist reports, the proposal is to use CNF,
> cnf...

I agree this isn't a very good solution, I expect that I'll have to add some stupid +, *, ! flagging or whatever to make things more complicated for the casual user.

Regarding auto-overwrites during the "apply LOTW to log" my current thought is that perhaps I should have some options:

1) "Use LOTW values unless you've got the QSL RCVD field set (i.e. you have a paper card)". This would be the default and you'd get the the prompt for log records that had the QSL RCVD field set.

2) Always keep current log values

3) Always overwrite log values with LOTW values

4) Always prompt (current 'technique')

I really adding more options because, again, this adds more complexity for the 'casual' user. However, all this extra crap for LOTW support is probably unavoidable.

Yahoo group: XMLog
Date: 2007-12-24 17:22:46 UTC
From: Mike McAmis
Topic: 2427 Message: 2464

I have both K1EL keyers - the serial port version and the USB version. They both work fine with XP but I prefer the serial port version. I don't remember why I switched back but it had something to do with the keyer features, not with the interface.

Mike - W1ECT

To: XMLog@yahoogroups.com
Subject: [XMLog] Re: Com Port for Keyer

From what I have read, USB printer interfaces are no good for CW/PTT keying because they do not give bit- or pin-level access to the port, only character-level access for sending complete characters to the printer. Bit-level access is necessary for CW keying.

The microHAM CW interfaces contain a K1EL WinKey chip, so you need to set the CW Port/Keyer type to WinKey with them.

The original K1EL WinKey should work fine through a USB-to-serial adapter, or you can now get a USB version of the WinKey from K1EL with a serial port adapter built in.

The advantage of WinKey-based keyers over PC-generated CW (whether on a parallel, serial or USB-to-serial port) is that the WinKey is almost immune to the "stuttering" often observed with PC-generated CW, which is caused by other asynchronous processes taking over your CPU. With the WinKey, your PC sends a string of ASCII characters to the device and the actual keying is done by a dedicated processor in the WinKey.

2467. Beta Version 5.43 is now the "current" version

Yahoo group: XMLog
Date: 2008-01-04 20:20:12 UTC
From: Mike McAmis
Topic: 2467 Message: 2467

I've made version 5.43 the "current" version available at www.xmlog.com

This version has FJ (Saint Barthelemy Island) added to the DXCC countries list.

And speaking of Saint Barthelemy Island, there is going to be a DXpediton there using the call TO5FJ which will not automatically be recognized by XMLog. TO5FJ falls into the category of a "special" french callsigns so to have it automatically recognized you'll have to define it using the "View/Show Callsign List" menu item.

2468. Changing ssb mode to rtty for imports.

Yahoo group: XMLog
Date: 2008-01-06 22:09:31 UTC
From: mefazamy
Topic: 2468 Message: 2468

I must be missing something.I wasnt to import files which have ssb mode indicated because I use soundcard rtty. I want the mode to be rtty, not ssb in the mode.
I've tried "Define default fields for import" menu,and I can get everything else to change except the mode.

Topic: 2468 Message: 2469

Hi, I'm assuming you are importing an ADIF file that has a bunch of QSOs that have the mode set to SSB (or USB, LSB, whatever) that should be RTTY.

Unfortunately you can't use the ADIF default field settings to overwrite existing data in the ADIF file, they are only applied if the data for that field is not provided by the ADIF file.

If all the QSOs in your ADIF file should be RTTY one way to handle this would to just do a global edit on the file to change the mode.

If you look at the ADIF file with something like WordPad you'll see that each entry has the mode defined by something like:

<MODE:3>USB

Note that the "3" defines the length of the field. So, do a global change of <MODE:3>USB to <MODE:4>RTTY and do the same for any mode settings of SSB or LSB or whatever.

Be sure to make a copy of your file before you try hacking it.

Yahoo group: XMLog
Date: 2008-01-08 22:36:12 UTC
From: N7MAL
Topic: 2470 Message: 2474

I asked a similar question a long time ago and here is the answer I received from Mike:

""Re: ADIF Help
Hi Mal, I don't have a good way to isolate the last 25 QSOs but here's
a way that will work. Select all records and go to the last record,
make a note of the QSO number. Now do your arithmetic to get the
number of the "first QSO of the last 25", i.e. last-24. Now scroll
back to that QSO (the mouse wheel is nice for this). Make a note of
the date. Now you can do a search for date >= than this QSO.

This might not result in 25 QSOs if this wasn't the first QSO you made
on that date! You'd then have to edit the ADIF file to delete those
first QSOs... What a mess eh?

Well I hope this isn't something you'll need to do very often - I've
never been in a situation where I've needed to do selections by QSO
number.

Well, for example, to select all the QSO's from 2005, enter this search key in the DATE field:

>=01/01/05,<=12/31/05

I was taught typing 58 years ago by Mr. Grainer. He taught me to always put a double space after a period. Nowadays, that's a no-no. But I still do it.

(Boy, am I GLAD I learned to touch-type-- sure comes in handy now in the computer age!!)

It would also be great to be able to edit the list (delete a record)
and restart printing on any record. If there is a paper jam, out of
ink, etc., it is necessary to either re-enter the QSOs in the print
que, or reprint QSLs that were printed correctly.

Hi, There's currently no facility for editing the QSL Label list but if you want to try some direct hacking just open the "labels.out" file in your XMLog install folder (usually c:\mlog). Since it's just a simple text file you can use WordPad or whatever.

Thanks, Mike,

Not the most convenient way of doing it but it will allow me to adjust the
list info prior to printing.

2485. vista xcw

Yahoo group: XMLog
Date: 2008-01-29 00:07:33 UTC
From: A. Non
Topic: 2485 Message: 2485

I'm having problems getting xcw to run on vista.
XCW loads, but the moment I enter a character to be sent, XCW stops and
tells me "a problem has caused the program to stop working correctly".
Anybody else had the same experience and come up with a solution?
MLog works jusr fine.

Thanks/73

I found a solution.

(1)In the XCW window select "options".
(2)In the CW Sidetone block select "Use sound card/MIDI"

XCW now works using Vista on my Compaq Presario F712NR laptop.

There may be other ways that my problem could have been solved on my
computer and other computers.

I am having huge email problems with my server. Here was my answer to
K9MRD's question:
Wayne here is the network.nod file I created. It connects the mlog packet
terminal directly to the VE7CC cluster software. Simply create a text
file
named network.nod. Then copy/paste the text below into the network.nod
file.
Then from inside the mlog terminal click on connect/connect node file or
just hit F5. Select the network.nod file you just created and you will
connect directly to the VE7CC software. I have used this for several
years
and it works great.
Good Luck 73

2491. XMLog with 2 radios

Yahoo group: XMLog
Date: 2008-02-24 19:32:48 UTC
From: Craig Bradley
Topic: 2489 Message: 2491

Mike, et al,

I have setup a second radio in my shack.

The first radio is a Kenwood TS-2000 interfaced with a microHAM microKEYER II.

The second radio is a Yaesu FT-1000MP interfaced with a microHAM microKEYER (original model).

The microHAM USB Router allows you to setup virtual COMM ports to interface the radio. It requires unique COMM ports for each microKEYER/radio.

I have TS-2000 microKEYER setup for CAT on COMM 4, WinKey on COMM 6 and FSK keying on COMM 5.

The FT-1000 microKEYER is setup for CAT on COMM 7, WinKey on COMM 3 and FSK on COMM 8.

As XMLog only supports COMM port from 1 to 8, I am running out of usable COMM ports (the USB Router will assign ports up to 30). The PC uses COMM 1 for the modem.

The other problem is that when I change radios, I have to reselect the ports for CAT and WinKey.

Is there some way to save a setup for each radio and recall it? I don't think that there is.

Also, it would be nice to support more COMM ports as there are other functions that I may need for other programs.

Mike, any plans to add some of these features?

73,

- Craig, AE6RR

> comes up Serbia. What can I do to make sure I show the right entity
> when it is not in the list?

YU8 counts as Serbia until it is added to the DXCC list. This will only happen if Kosovo joins the UN (unlikely as Russia intends to use its veto) or the ITU allocates it a prefix block which will take some time. ARRL are fairly clear about Kosovo's DXCC status - see http://www.arrl.org/news/stories/2008/02/20/102/?nc=1

For the moment YU8 counts as Serbia and you should not change anything in XMLog at the moment.

That is correct. It looks like the Russians and
Chinese will block Kosovo from entering the UN, so
whether or not it will really become separate remains
to be seen. The DXCC desk has not ruled on the
situation one way or another at this time.

Hi Craig,

I don't have any plans for adding support for multiple radios (or for radio 'profiles') in the near future.

You could maintain two versions of mlog.ini, one with each radio definition, but it would be somewhat of a pain to keep the two files in sync with each other for the non-rig settings.

I suppose you could write a program to hack the mlog.ini file back and forth if you were a real glutton for punishment!

There are a couple of undocumented commands avaialable on the XMLog command line. One of them lets you specify the options file, e.g.:

c:\mlog\mlog.exe -ini c:\mlog\mlog-1.ini

Hi Mike,

Thanks for the info. Maybe I can setup two links and use the command line option.

I am also fighting this with other software and looking at the problem of multiple programs getting data from the same radio.

There is a program called OmniRig (http://www.dxatlas.com/OmniRig/) that claims to solve this problem. It also supports multiple radios. The documentation is a bit sparse, but I plan to look into it. I am not clear about how an application connects to OmniRig. Do you have any knowledge of this program? There is some sample code on the web site but I haven't had time to look at it yet. It might be useful for XMLog.

From: dquick
Topic: 2391 Message: 2506

I agree. I too wish that XL Log continuously polled the rig in the way that MixW, WriteLog, etc., do.

As it is now in order for me to get XM Log to control my SteppIR antenna I have to go into the log entry window, right-click on the Freq. field, the select "Get Frequency from rig." When I do this the SteppIR controller "overhears" the data transmitted from the rig to XMLog and sets the antenna's operation frequency to match.

It would be much more convienient if XM Log was polling the rig for frequency every second or so. That way when I tune from the top of 20m to the bottom of the band, or QSY from 20m to 40m my antenna will be able to detect the change in operating frequency and automatically QSY.

2507. Another item for the wish list

Yahoo group: XMLog
Date: 2008-03-09 15:55:22 UTC
From: dquick
Topic: 2507 Message: 2507

Along with the option to have XMLog continuously poll the rig for it's operating frequency (which I mentioned in another thread), I think it would be nice to see a list of all contacts made with a country (DXCC entity) when right-clicking on a spot in the Spots Map.

For example, if I right-click on a spot for P40V, one of the options I can currently select is "Display all entries for P40V". I think it would be nice to have the option to also select "Display all entries for P40" or "Display all entries for Aruba" or something like that.

Thanks.

2508. RE: [XMLog] Re: strange CAT behavior

From: Craig Bradley
Topic: 2391 Message: 2508

I am using a microHAM microKEYER in my setup. It has a software package called USB Router. The USB Router allows you to create virtual COMM ports, one of them is the CAT COMM port (the microKEYER has a RS-232 port in it for CAT). You can also set a mode where the USB Router polls the rig when the logging program is not talking to the radio. This would solve the problem with your SteppIR and other items such as some of the new amplifiers that monitor the rig frequency. Of course you need a microHAM product to do this.

One related feature that I would like to see is a mode or button to have the log entry window update time/date, frequency, mode, signal report (59 vs. 599) without changing the entered call or have it do it when the ADD button is pushed to save the QSO. When chasing a DXpedition station like TX5C, I frequently changed bands to see if the signals have improved on that band or to see if they are done with "EU Only". I have occasionally logged a QSO with the wrong data that way. Also I usually have the log entry window started with the call entered when working a pileup. When I make the Q, I have to double click on the time field to update it before clicking the ADD button or the Q is logged with a "stale" time.

BTW, I don't know if everyone knows this, but you can just double click on a field in the Log Entry window to update it (before you save it of course).

Subject: [XMLog] Re: strange CAT behavior

I agree. I too wish that XL Log continuously polled the rig in the way that MixW, WriteLog, etc., do.

As it is now in order for me to get XM Log to control my SteppIR antenna I have to go into the log entry window, right-click on the Freq. field, the select "Get Frequency from rig." When I do this the SteppIR controller "overhears" the data transmitted from the rig to XMLog and sets the antenna's operation frequency to match.

It would be much more convienient if XM Log was polling the rig for frequency every second or so. That way when I tune from the top of 20m to the bottom of the band, or QSY from 20m to 40m my antenna will be able to detect the change in operating frequency and automatically QSY.

2509. FT-2000 Rig Control (Mode) Issue

Yahoo group: XMLog
Date: 2008-03-15 15:09:34 UTC
From: Pat Atwood
Topic: 2509 Message: 2509

Hi All,

I just recently purchased an FT-2000 and discovered that when I double-click on a call sign in the XMLog spots map, the rig will go to the correct frequency but will not change modes to match the spot. I'm using v5.43. I verified that the packet spots have for instance, "RTTY" in the comment so that the rig should go into RTTY and LSB mode, but it will stay in the current mode instead.

I used XMLog with an FT-990 before this and the mode change worked fine. I've read both the XMLog help file and the FT-2000 manual and can't find how to fix this. Any suggestions?

73,
Pat, NG1G

2510. Re: FT-2000 Rig Control (Mode) Issue

Yahoo group: XMLog
Date: 2008-03-16 15:50:23 UTC
From: Mike McAmis
Topic: 2509 Message: 2510

Hi Pat, When I first added support for the FT-2000 I checked out the CAT documentation and was pleasantly surprised to find that they had just copied the Kenwood protocol. I thought this would make things easy but on closer inspection I now see that they didn't copy it exactly. So this means I'll have to make some changes to deal with Yaesu's normal way of doing things (make sure no two Yaesu rigs use compatible protocols).

2511. QRZ.COM CALLBOOK AND VISTA

Yahoo group: XMLog
Date: 2008-03-16 15:39:54 UTC
From: Robert Wilson
Topic: 2511 Message: 2511

I am installing XMLog on my notebook which uses to Vista OS
Also use Norton Protection center for fire wall

Have used XMLog as my log book for quite a while.

I set up the callbook options the same as on my windows 98 and XP pro computers BUT

When I click the call box to get callbook info I am told

Network error connecting to 'www.qrz.com' Connection forcefully rejected.

Any Ideas?

Thanks Mike. Now that you mention it I see that Yaesu added a provision to set the mode on either VFO, whereas Kenwood didn't. It's always something.

Thank you for an excellent piece of software.

Hi Pat, Yes - you've hit the nail on the head there. I think you'll find that the "get info from rig" function has problems too because they've diddled the layout of the data returned from the "IF" command. At least it seems that the FT-2000 and FT-450 use this same modified command set.

When I add a new entry the software is getting the frequency from the rig. The only thing odd about it is that it doesn't seem to round the frequency properly. 10.144.99 on the display is reported as 10.144 in the log entry window. I certainly can live with that.

I read somewhere that the FT-2000 and FT-9000 family of transceivers use the same command set as well, which makes sense. Although I haven't verified it, I know that in the version of WriteLog I use only the FTDX-9000 is listed and it works perfectly fine with my '2000.

If would be nice if "Display all entries for call" under the Display section included the notes field. In a rag chew it's nice to be able to easily look back to see what we talked about on the last QSO. As it works now this function gives you nothing more than you can get leaving the "Show QSO's + Check Call" window open under the View section.

For those of us using more than one log; when entering qsos it would be great to have the name of whichever log is being currently used to be displayed.

XMLog looks for the trailing </html> tag to indicate the end of the data from the look-up request. QRZ.COM seems to have made changes such that the look-up page is now missing the closing </body> and </html> tags. If you're curious you can go to the main QRZ.COM page and do a right-click and pick "view source" and you'll see the tags at the end. If you then do a call look-up and view the source you'll see that the tags are missing. I guess I'll have to implement some other technique of determining when all the data has been received, what a pain.

Thanks Mike, guess that explains it.

I would hope they will correct that obvious error on their website.
HTML pages without closing </body> and </html> tags are simply not
valid web code, sloppy coding which they should be ashamed of...

I have just made a posting on their forums -

It's been a long time but I wonder if any of the other call book look sources might work instead of QRZ.com? Has anyone tried that? I too am a blind ham and would hate to see this feature go since XMLog seems to be the best at reading field titles and the like for us who use screen readers.

Thanks much and very 73.

2534. *NO* to using qrz.com XML data port!

Yahoo group: XMLog
Date: 2008-03-22 16:45:10 UTC
From: David Spoelstra
Topic: 2534 Message: 2534

I guess all of you pushing to use the QRZ.com XML Data Port are happy to pay the $30/year charge to QRZ.com? If you read the spec, it says, " Access to the QRZ XML port requires a valid subscriber login consisting of a username and password, and a *current, active subscription with QRZ*.

From their website:
XML Data Access
$29.95 per year for access to our high-speed XML data port for live callsign lookup integration with popular logbook programs.

I for one would rather just have Mike do it the old way. I don't lookup enough callsigns to justify $30/year...

There does seem to be an issue. It works with most callsigns but
fails with others. A quick look at the corresponding search results
on QRZ.COM site seems to indicate it is OK with those who have
accounts and added information, but fails on those which have only
the bare callbook information. The presence or absence of the line
'QSL via' seems to be relevant.

eg G3YMC, G4DYO, G4DDL work consistently
G3NCN, G4DDN fail everytime.

When I attempt to run the Setup program to install this version on my Windows XP system, I am getting a box that tells me that Setup can't be run until some system files are updated and the system restarted. I've twice now tried to let Setup update these files(as the box offers to do) and restart the system, but am still getting the same message box that repeats the same statement after the files are supposedly updated. Any idea what is going on here and how I can get this to install??

From: Mike McAmis
Topic: 2553 Message: 2553

There seems to be some lingering Microsoft bug that effects programs
that use the system file scrrun.dll

There's a "dependency file" named scrrun.dep that contains incorrect
info. You can delete this file or you can download and run a program
provided by Microsoft that edits the file and fixes this problem.

This doesn't affect everyone that tries to do the install, I suspect
it's related to what software you have previously installed.

For more info you can do a search here for scrrun to see what people
have done or if you don't want to look through all these posts the one
that talks about the download-able program from Microsoft is:

2560. Sorting & Printing QSL Labels

Yahoo group: XMLog
Date: 2008-03-24 18:21:40 UTC
From: Don Nesbitt
Topic: 2560 Message: 2560

Using Version 5.46 (and as I recall pretty much any
previous version).

Is there a way to change the default sorting of a
lable list FROM being: "sorted by Country, Callsign,
Date, and Time" TO: just being sorted by Callsign?

This would be handy for me as I did a little
dxpedition and find it easier to put the incoming
cards in alphabetical order by callsign without regard
to country, date, etc.

So far the statements in the Help file would indicate
that it is not possible within the program. Yes, I
could take it out to Excel, etc. but it would be nice
not to have to. Thanks for suggestions. 73 -- Don
N4HH

From the Help File: "Whenever you create a label it is
added to a list of labels waiting to be printed. To
print a list choose Labels/Print QSL Labels List or
Labels/Print Mailing Labels List. When label lists
are printed the labels will be sorted by Country,
Callsign, Date, and Time."

Never miss a thing. Make Yahoo your home page.

From: Mike McAmis
Topic: 2560 Message: 2561

If you're going to do a log search by date or whatever to isolate the QSOs that need labels try this:

1) Use the "Display/Sort By" menu item to have entries selected by a log search sorted by callsign.

2) Do a log search with the appropriate search keys to isolate the log entries that need labels.

3) Use the "Labels/Add QSL Labels For All Selected Entries" menu item. This will do the job since the labels are added in the same order that they were returned by the log search.

Almost all contest logging programs output both cab & adif files. For the very programs that don't AD1C, Jim, has written a small program that converts cab to adif.

Topic: 2553 Message: 2565

WOW I'm almost dizzy from all the problems/weirdness this new install has created. W.O.W.
First: In order to get it running I had to bring it up twice in a row. The only way I could close out one instance was with ctrl-alt-del. I brought up 2 instances by accident. Now the program starts just fine every time.
Second: QRZ lookup still doesn't work '''''sort-of''''''. I get the MS dialogue box with error 40006,,,,,, BUT,,,,, it looks it up and gets the info after I click OK on the box that says it doesn't work......
I tried the easy stuff like deleting and reinstalling but the results are still the same.
Any suggestions.?.?.?.?.

There seems to be some lingering Microsoft bug that effects programs that use the system file scrrun.dll

There's a "dependency file" named scrrun.dep that contains incorrect info. You can delete this file or you can download and run a program provided by Microsoft that edits the file and fixes this problem.

This doesn't affect everyone that tries to do the install, I suspect it's related to what software you have previously installed.

For more info you can do a search here for scrrun to see what people have done or if you don't want to look through all these posts the one that talks about the download-able program from Microsoft is:

From: N7mal
Topic: 2553 Message: 2566

After much teeth gnashing and about 4 or 5 hours of work, spread over several days, I resolved the problem. I'm not quite finished cleaning up the messes around the edges but I'm close. XMLOG is working perfectly and looking up QRZ just fine.
I seriously doubt anyone else will have the problems I had but just in case: Be careful installing 'Linksys' advisor. Also be careful with Firefox 3 beta 4. I had to replace/update several dll's that became corrupted with the installations of various software's over the last few months.
At any rate my computer is working almost 100%.

2567. Re: Sorting & Printing QSL Labels

Yahoo group: XMLog
Date: 2008-04-07 20:28:29 UTC
From: Mike McAmis
Topic: 2560 Message: 2567

Hi, Sorry to have mis-spoken but it turns out that setting
the "Display/Sort By" order does not affect the order that QSL labels
are printed. It does change the order in which they are added to
the "labels.out" file but these entries are re-sorted at print time in
case multiple groups of QSLs had been added to the print list.
Currently there is no way to change the "Country, Call, ... " sort
order for labels.

2568. disappearing spots.

Yahoo group: XMLog
Date: 2008-04-20 14:56:35 UTC
From: Terry Wassell
Topic: 2568 Message: 2568

I have suffered from the "disappearing spots" problem in the Spots Map. I tried different things and could never solve this strange problem where the spots briefly appear and then suddenly disappear. I played with the settings "spot timers" in the options, Spots Map menu. I have also "fiddled" with options to show unneeded spots and inhibited spots, etc. but never could solve the problem.

Recently, when adjusting my computer clock, I hit upon the solution, which seems to involve the clock and maybe some internal time keeping part of XMLog. The problem was solved when I changed the Windows clock time zone to "(GMT) Casablanca, Monrovia" instead of "(GMT) Greenwich Mean Time : Dublin, Edinburgh, Lisbon, London" at that point everything worked fine. Maybe the problem has something to do with the daylight savings time adjustment.

more info: operating system WIN98SE (yes, I know it's no longer supported but it works for me).
computer: Dell Latitude CPx, Pentium III, 500Mhz, 40GB HD, 256MB RAM. (old but still works, oK).
XMLog version: 5.46

I keep my computer on GMT not local time.
I hope this note may help others who have suffered from this problem.
I love XMLog, and have 92,564 QSOs in the log from 1968 to present including many contests.

From: Terry Wassell
Topic: 2569 Message: 2569

It sure would be nice to see the "DXCC Status" information without having to wait for a "spot".
For example, if I am wondering if I need ZS on RTTY or on 12M, I have to use the log window, search for ZS in the "country" window, then scroll through the QSOs to find the answer. I know, I can create a DXCC checklist or "worked / confirmed" list and scroll through that to answer my question, too. But it sure would be nice to have a "shortcut" that quickly lets me see the "DXCC status" information for a particular country, just like the packet window info.

It's a small improvement that, I think, others might find useful, too.

Hi Terry, The "QSOs + Check Call Window" is useful for this kind of thing (if you have a little more screen space left). Use the F4 shortcut or the "View/Show QSOs + Check Call Window" menu item. You can update the info (which includes the needed bands/modes) by typing in a prefix or a full callsign. The info is also updated when you move to a new log window entry, type a callsign into a new log window entry, or click on a callsign within any of the packet windows.

Thanks Nelson I did get five to print on one label. At first I
thought it wasn't working, then I figured out I had to erase my label
list - change label definition - then recreate my label list,
otherwise I just kept geting 1 QSO per label.

I am also using V5.47, and I have noticed (with this version) that the arrows on the bar of the log page sometimes start to scroll for no apparent reason. Sometimes the only way to stop the rapid scrolling through log entries, is to just totally stop the program, and start over. Then all is ok, usually for a long period, then it happens again . I am using an "ME" machine. Other than that, all works FB ...Beats me !!!!!!

The Zip file is definitely broken.
Here is what I've found to make the next/previous arrows work: Click on the 'select' box until the bottom left status bar shows how many QSO's are in your log.
In other words if you have 25,000 QSO's in your log that number needs to be showing in the left side of the status bar. Then the next/previous arrows work just fine.

Hi Mal, Ogasawara is one of the countries that doesn't have a unique prefix that can be guessed by XMLog (like 3D2, TX, and VP8). You'll need to use the "View/Show Callsign List" menu item to set their explict call as Ogasawara.

Hi Mike: Yes that's what I did but I had to do it both ways JA0AEK/JD1 and JD1/JA0AEK. I was surprised that I had never noticed it before. The only reason I noticed it all is because of my imbalance between JD1/O & JD1/M LOTW QSL's received.
Thanks Mike

Hi Mal, Ogasawara is one of the countries that doesn't have a unique prefix that can be guessed by XMLog (like 3D2, TX, and VP8). You'll need to use the "View/Show Callsign List" menu item to set their explict call as Ogasawara.

2590. Display Excel no Office using Open Office

Yahoo group: XMLog
Date: 2008-05-22 07:51:26 UTC
From: g0lgj
Topic: 2590 Message: 2590

Hi anyway to get XMLOG to open Open Office rather than Excel which I do not have ?
If I select File I get Problem creating Excel Report, can't start Excel (429) ActiveX component can't create object.

when I had excel it would open the spreadsheet for me without selecting File.

Any thoughts.

Regards Mark

Hi Mark, Microsoft Excel is part of the Microsoft Office package.
Perhaps you didn't install Excel when you installed Office or you have
some limited version of Office that doesn't include Excel?

You misunderstood Mark, Mike.

Many of us these days use OPEN OFFICE (http://www.openoffice.org) instead of MS Office. But the Excel export functions of XMLog rely on routines which are part of MSOffice so don't work. Mark (and myself for that matter) are looking for a way of using the Excel export facility with Open Office.

We have never ever installed any part of MS Office!!

I wrote a small utility to produce a CSV file version of my DXCC countries worked (from a DXCC checklist saved to file) which can then be pasted into an Excel spreadsheet (MS Office or OOo) and used to print a nice checksheet of my countries worked. Find it at http://www.davesergeant.com/bbcbasic/bbcbasic.htm (program xmlog1). As with all my programs they tend to be written to fulfill my own needs though some may find them useful.

I just upgraded to a new computer.

I did not enrich Bill Gates by purchasing Microsoft Office.

I instead downloaded Sun's free Open Office.

I believe there are many like me, and will be many more.

You might try creating a text report and saving it to disk as a txt file, then import that into open office. I have had luck importing files into Excel that way.

If you don't want to pay the full fare, you might look into the Students and Teachers edition of MS Office. You can get it for $98 on Amazon. http://www.amazon.com/Microsoft-Office-Home-Student-2007/dp/B000HCZ8EO/ref=dp_ob_title/102-6436315-2884166. You can also get it at Fry's and other computer stores. This is what I have, it comes with a license for 3 computers also.

I find it easier to use the real thing.

Good luck & 73,

2601. A way to speedup importing?

Yahoo group: XMLog
Date: 2008-06-18 06:21:12 UTC
From: David Spoelstra
Topic: 2601 Message: 2601

Hi Mike!

I do lots of importing of club logs and have to dedupe them. I always have the QRZ option on because I want the address info filled in on QSOs that get imported. It appears that even if it's a duplicate QSO, it goes out and fetches the info from QRZ. If that's true, it would be faster if it did the dupe check on the QSO first, and only go out to QRZ if it's a dupe.

Thanks for such a great logging program!
-David, N9KT

2605. XMLog LoTW Prototype v10

Yahoo group: XMLog
Date: 2008-06-26 18:58:52 UTC
From: Mike McAmis
Topic: 2605 Message: 2605

I've posted a new beta version of XMLog (5.50) at www.xmlog.com/beta
and an associated LoTW prototype at www.xmlog.com/lotw

All LoTW features have been enabled including the "Import/Apply LoTW
Data to Log" menu item.

The major project remaining is deciding how to modify all the DXCC/WAS
reports to provide breakdowns of QSL card vs. LoTW confirmations. In
this version the DXCC/WAS reports do not differentiate between
confirmations from cards or LoTW. You can get this information by brute
force by doing log searches that select log entries confirmed by LoTW
or non-LoTW (of course some QSOs may contribute to both totals...).

See the updated documentation in the zip file for more info.

Be sure to back up your log file before playing with the "Import/Apply
LoTW Data to Log" menu item.

Hi Gerry, I'm not sure what the official name of the interface is but I've seen it identified as the "Microsoft Excel Object Library".

Basically it provides a library of function calls to create a new spreadsheet, define fields, set field attributes, add records, etc.

Okay-- FWIW--

In a thread at
http://forums.msdn.microsoft.com/en/csharpgeneral/thread/ea144fef-0c7f-4204-aa02-125bfec81600/
someone asked on Feb 5
"I need someone's help to teach how to create, open and save OpenOffice Calc programatically, by using either C# 2005 or C++ 2005 (CLR). I am very new to OpenOffice."

Several replies, including this one on Feb 7
"... To do the same with OOCalc, you'd need an "OpenOffice Calc Object LIbrary COM object".
The problem is, that doesn't exist, and as OOCalc is written in Java, and doesn't use COM objects, there is never going to be such a library."

But then this one on April 2
"Actually, there is a way to do this in OpenOffice calc, and c#.
See this link. There you will find how to open file, and how to read/write content of particular cell..
http://www.openoffice.org/servlets/ReadMsg?listName=dev&msgNo=18569
For writing file, add this code to example from the link above.
XStorable2 xs = (XStorable2)mxDocument;
xs.storeToURL("file:///C:/oo.xls", new unoidl.com.sun.star.beans.PropertyValue[0]);
You will need to add reference in your project to this files.
C:\Program Files\OpenOffice.org 2.1\program\cli_uno.dll
and every file from this folder:
C:\Program Files\OpenOffice.org 2.1\program\assembly"

As I say, "FWIW"

2615. Install Problem on Win XP

Yahoo group: XMLog
Date: 2008-07-05 20:04:20 UTC
From: Dave Sparks
Topic: 2615 Message: 2615

I'm having a problem installing XMLOG on my desktop computer. When I try to install it, I'm told:

"Setup cannot continue because some system files are out of date. Click OK if you would like setup to update these files for you now. You will need to restart Windows before you can run setup again."

After I click OK, I'm told "Do you want to restart Windows now?" and I click YES. But after I click YES, Windows reboots and when I try to rerun Setup, I get the same thing. It still tells me that my system files are out of date.

What am I doing wrong? The computer is running Windows XP Media Center edition.

Thanks and 73.

Hi Cookie,

I just ran through the install procedure again. "OK" and "Cancel" are the only two options offered, and "Cancel" seems to do just that.

This is actually a first time installation for this computer. I've tried
installing both 4.49 as well as the newer 4.50 beta version, with similar
results.

You may need the Visual Basic runtime files.

You can search the Microsoft web site and download them. Many programs require these files.

Good luck & 73,

Hi David,

I was having the same problem when trying to install XMLOG on my XP machine. I decided to check with the Windows XP updates site to see if I'd missed something (though I receive "automatic" updates) and found that there is now a Service Pack 3 available. After I installed the SP3 on my machine (which took a looooong time, by the way) I had no more problems getting XMLOG to install.

Hi Dave,

There seems to be some lingering Microsoft bug that effects programs that use the system file scrrun.dll

There's a "dependency file" named scrrun.dep that contains incorrect info. You can delete this incorrect file or you can download and run a program provided by Microsoft that edits the file and fixes this problem.

This doesn't affect everyone that tries to do the install, I suspect it's related to what software you have previously installed.

For more info on this go to http://groups.yahoo.com/group/XMLog/ and search for scrrun to see what people have done.

If you don't want to peruse all these posts the one that talks about the download-able program from Microsoft is:

http://groups.yahoo.com/group/XMLog/message/2284

2631. Re: Screenshot

Yahoo group: XMLog
Date: 2008-07-07 21:33:55 UTC
From: Mike McAmis
Topic: 2628 Message: 2631

Hi Mal, It looks like at some point the prefixes file has gotton out of sync with the version of XMLog you're running. If you go to your XMLog install folder (usually c:\mlog) and open the file "prefixes" with WordPad you'll find a line near the top giving the prefix file version number. The most recent file has the line:

PrefixesVersion=5.47

This file should have been installed along with XMLog version 5.47 or later. It's possible that the file was not updated if you had edited it or otherwise caused the file's "last updated" date to be changed.

In any case you can always do a brute force install by just extracting the prefix file from the xmlog.zip file and replacing the copy in the XMLog install folder.

Once the correct file is in place check to be sure that all those St. Barts log entries have the correct prefix/country (FJ) and the Bosnia log entries should be E7 (not T9).

If either group has the wrong prefix let me know and we can easily deal with that problem.

Mike - W1ECT

2632. Re: [XMLog] Re: Screenshot

Yahoo group: XMLog
Date: 2008-07-07 22:26:51 UTC
From: N7mal
Topic: 2628 Message: 2632

The file was created: Friday, April 18, 2008, 14:14:35
The file size is 24K

Here is the important line from inside the file:

The PrefixesVersion indicates the most recent XMLog
; version that had changes to to this file.
;
PrefixesVersion=5.47

Mike might this problem I'm seeing also explain the error message when I try to install the LOTW beta.?.?.?

Thanks for the reply and Best 73

Hi Mal, Very strange then... If you use the "View/Show DXCC Country List" menu item are the FJ and E7 prefixes in the list as St Barts and Bosnia? If you go to the log entries noted in the error message are the Prefix/Country fields set correctly?

And by the way, what action did you take that caused the message to be displayed? (That "Create Summary" routine is called in lots of places, mostly the report generators).

One of the benefits of being an 'ole-fart' is when you screw things up as badly as I have I can blame it on 'Senility'. (that's my story and I'm stickin to it).
A couple of months ago I had to modify the mlog icons. When I changed the icons for 'senility' reasons I changed the shortcut directory to my mlog backup directory, even though I was getting the icon from the mlog directory. I discovered all these 'screw-ups' when I ran the LOTW beta. I have everything now pointing to the mlog directory and even changed the name of the back-up directory.
The long/short of all this is I was my own worst enemy in all this and for that I apologize for all the bandwidth.

2638. utility program

Yahoo group: XMLog
Date: 2008-07-11 00:09:59 UTC
From: N7mal
Topic: 2638 Message: 2638

I am looking for some sort-of utility program that I can clean up the mess I've made with my logbook and LOTW.
Here's what I need: In the last 5 years I've worked HC8N(during contests) 25 times. I've imported my LOTW QSL's and now I have 50 contacts with HC8N. There are hundreds of other examples in my log and I want a utility to clean it up. I can't/won't do it manually by hand.
Fortunately award credit submissions are not based on my logbook but it would be nice to clean up the mess I've made.
Thanks in advance.

Hi MAL,

I'm not quite sure what you mean by "mess I'v made". If you've worked a station 25 times you should have 25 LoTW entries for that station, and hopefully he has 25 for you. If you can elaborate a bit on what "the mess" is your tryingto clean up it may be easier to get more specific help to clean up "the mess.

As I understand it, his log now shows each contact twice after the importing of LoTW. He needs to show on his original log that the contact has been confirmed through LoTW.

Yes Adam I'll be happy to elaborate: Using the HC8N example again I have 25 contacts with him. I imported the LOTW file and now my logbook shows I have 50 contacts. At no time during the input process was I prompted about duplicate entry. I now have 25 duplicate entries. This same problem has happened with many contacts in my log that were confirmed on LOTW. Approx 25% of the contacts in my logbook have been confirmed on LOTW and that 25% is how much bigger my logbook has grown with duplicate contacts.
I hope that answers your question.

Hi Mal, Unless you have disabled backups XMLog will do a log backup before any ADIF import or a "Apply LoTW to Log" operation. The backup files are saved in folder name "Backups" in your XMLog install folder.

From: Craig Bradley
Topic: 2638 Message: 2645

Hi Mal,

Are you exporting and uploading Qs from your contest logger (WriteLog?) directly into LoTW? If so, the "mess" may be in LoTW. Check for duplicates there. WriteLog keeps the QSO time in HH:MM:SS format, XMLog keeps it in HH:MM only. If you upload the same Q with both formats, LoTW will consider them separate Qs and you will have duplicates in LoTW, then if you download from LoTW to XMLog, you will replicate them there also.

I did this ONCE and I found out that there is no way to delete the Qs from LoTW, they are in there forever. Now I always import the Qs into XMLog first and then upload to LoTW. XMLog either truncates the seconds or rounds them up, I am not sure, then you are always uploading to LoTW in the same format.

Unfortunately if the mess is in LoTW, cleaning up XMLog will not help as you will get them back again.

Mike,

Maybe you can check for this type of a duplicate during the import process, which would probably be a good idea.

73,

- Craig, AE6RR

2646. Re: utility program, LoTW record matching

Yahoo group: XMLog
Date: 2008-07-13 23:33:24 UTC
From: Mike McAmis
Topic: 2638 Message: 2646

Hi Craig, Actually the "Apply LoTW Data to Log" function already does a search using a time window of +/- three minutes. (If this gets multiple results, the one with the closest time gets used). If this doesn't get any result a "fuzzier" search is used with a +/- ten minute window along with "fuzzier" mode matching criteria (all Phone modes equivalent, all Data modes equivalent, etc.)

The ADIF import doesn't do this since I assume that the only reason there would be a dupe here is if you are re-importing the same ADIF file. Perhaps this LoTW fuzzy log entry matcher would be appropriate for ADIF imports to catch the problem you had with WriteLog - I'll have to try to duplicate that here since XMLog should chop the date/times to the same value on a subsequent re-import of an ADIF file.

Let me add a little maybe to help undo some of the misunderstanding(since I asked the original question)
Mike long before you started working on the LOTW interface I downloaded my LOTW QSL Rcvd file as an ADIF format. I then imported that file into xmlog. I ass/u/me/d(assumed) xmlog would query me about the duplicate entries. Since there were no queries I again assumed xmlog had dealt with the duplicates. I had an even higher degree of confidence xmlog dealt with it because the QSO count remained the same, it neither increased or decreased. I would naturally have expected that because I wasn't importing any new QSO's, only LOTW QSL's.
As a result I have a significantly larger log than the QSO count reflects. I am aware of the problems so it's not critical to any awards. I only apply for awards based solely on LOTW QSL's as posted on the ARRL page using their format. Xmlog is not in any way involved in the award process.
A little background: I've never been interested in awards in 50 years as a ham. I've been the rarest DX in the world, have won contests, etc etc. Awards have never been a priority. With the advent of LOTW the ARRL has made the award process almost idiot proof(with me in mind). Now my only interest is in cleaning up my logbook.
Hope this added light from a slightly different direction.

Here is an ADIF record of just one of the entries in question. This
may/may-not help in the head-scratching process:

<QSO_DATE:8:D>20071124 <TIME_ON:4>0942 <CALL:4>HC8N <FREQ:5>7.000
<BAND:3>40M
<MODE:2>CW <CQZ:2>10 <DXCC:2>71 <QSLRDATE:8:D>20071130 <QSL_RCVD:1>Y
<GRIDSQUARE:4>EI59 <IOTA:6>SA-004
<STATION_CALLSIGN:5>N7MAL <OPERATOR:5>N7MAL <MY_CQ_ZONE:2>03
<MY_GRIDSQUARE:4>DM25 <MY_LAT:11>N035 00.000 <MY_LONG:11>W114 10.000
<MY_STATE:2>AZ <MY_COUNTRY:3>291 <EOR>

<QSO_DATE:8:D>20071124 <TIME_ON:4>0942 <CALL:4>HC8N <FREQ:5>7.019
<BAND:3>40M
<RST_SENT:3>599 <RST_RCVD:3>599 <MODE:2>CW <CQZ:2>10 <DXCC:2>71
<COMMENT:24>CQ WORLD WIDE DX CONTEST
<STATION_CALLSIGN:5>N7MAL <OPERATOR:5>N7MAL <MY_CQ_ZONE:2>03
<MY_GRIDSQUARE:4>DM25 <MY_LAT:11>N035 00.000 <MY_LONG:11>W114 10.000
<MY_STATE:2>AZ <MY_COUNTRY:3>291 <EOR>

The first record is what was received from the ARRL. The second record is
what I imported into xmlog, as an ADIF, immediately after the contest. In
other words the first entry was received several months after the second
entry....
Hope it helps.

2649. Re: utility program, LoTW record matching vs ADIF

Yahoo group: XMLog
Date: 2008-07-14 23:03:58 UTC
From: Mike McAmis
Topic: 2648 Message: 2649

Hi Mal, When doing an ADIF import XMLog checks the Date/Time/Frequency/Mode when looking for dupes (no fuzzy checks here). Since the Frequency in the LoTW entry just has the band (7.000 rather than 7.019) the dupe check failed and the record was added as a new log entry.

A bit strange that the full frequency info was lost. Perhaps that info isn't taken from the log info you provide to LoTW and is taken from the info provided by the other guy? Or since LoTW is done by band and not frequency the detail is lost? Or maybe it was (is) a bug in LoTW...

In any case since you did the operation long ago there's no way to undo it. I can't believe that the log entry count didn't reflect any added entries.

One result of this is that I made a change to check the file header to see if a "ProgramID=LoTW" is present. If the file is flagged as LoTW I won't let you specify it for a ADIF import. If the file is not flagged as LoTW and you try a LoTW Apply or Validate operation I'll display a message noting that the file doesn't appear to be an "official" LoTW file and give you the option on continuing anyway.

Still working on the LoTW edit updates so it will be a few more days until a new version appears.

Hi Mike,

I haven't had this problem myself. I do have dupes in LoTW, but I haven't played with the new software enough to see if they are coming back from LoTW. It doesn't look like that will be a problem. I was just throwing out an idea.

I have one QSL duplicated in LoTW from VP6DX on 80m. They both have the same time and frequency (in the CW band) but one has CW for the mode and the other has SSB. This error came from their log, not mine and they are both QSL'd with my one QSO on 80 CW. Fortunately, I also have a 80m SSB confirmed too.

One question: If for some reason, you lost your log file, can you download it (the whole log) from LoTW with the new XMLog? This happened to someone that I know and he said that his logging program (I don't remember what he is using) recovered the whole log back from LoTW. It is nice to know that your log is backed up there!

One thought on QSLs from LoTW with differing data, if you have say a station logged with one state, grid, etc. (probably from QRZ.com) and LoTW gives you a different record, how about an option to duplicate the QSO and save both in the log. That way you would not lose the information as the station could have moved and you don't know which is correct. Just a thought.

73,

- Craig, AE6RR

Subject: [XMLog] Re: utility program, LoTW record matching

Hi Craig, Actually the "Apply LoTW Data to Log" function already does a search using a time window of +/- three minutes. (If this gets multiple results, the one with the closest time gets used). If this doesn't get any result a "fuzzier" search is used with a +/- ten minute window along with "fuzzier" mode matching criteria (all Phone modes equivalent, all Data modes equivalent, etc.)

The ADIF import doesn't do this since I assume that the only reason there would be a dupe here is if you are re-importing the same ADIF file. Perhaps this LoTW fuzzy log entry matcher would be appropriate

for ADIF imports to catch the problem you had with WriteLog - I'll have to try to duplicate that here since XMLog should chop the date/times to the same value on a subsequent re-import of an ADIF file.

Topic: 2638 Message: 2651

Hi Craig: In my case the dupes on LOTW are not the problem. I keep using HC8N as a reference and I started out with 13 QSO's in my log, I now have 25.Every QSO in my log with 1 exception matches perfectly what I downloaded. So now for 12 HC8N contacts I have 12 duplicate LOTW QSL entries.

I can answer your second question: The public answer is no or 'h'-no. But if you ask very nicely and act really pathetic they will do it for you. I had it explained why they really really frown on it. They will not allow a user to go in and get their log, someone from the ARRL must do it from their server. The only thing a user can download is their QSL's and even then they prefer you use the short form instead of the long form.

Good Luck...73

2652. New Beta 5.51 - OmniRig

Yahoo group: XMLog
Date: 2008-07-24 19:55:48 UTC
From: Mike McAmis
Topic: 2652 Message: 2652

Hi, I've just posted a new XMLog version at www.xmlog.com/beta

This version includes support for an alternate rig control interface from VE3NEA called "OmniRig". This freeware package is available at www.dxatlas.com and allows multiple applications that use the OmniRig interface to access the rig port at the same time. At this point the only other application I know using OmniRig is CWSkimmer (also available at www.dxatlas.com). Support for XMLog's built-in rig interface is still available so you won't have to install OmniRig unless you want to play around with it.

One side effect of using OmniRig is that it uses a rig polling scheme and periodically gets the frequency and mode from the rig. For those of you who have been asking for a rig polling feature, this should do the trick.

Those of you who have been playing around with CWSkimmer might try enabling the CWSkimmer Telenet node support. At this point you can connect to CWSkimmer as though it were a normal Internet PacketCluster node (address "localhost 7300"). Now CWSkimmer will start sending out info on the stations it identifies as DX spots! (and you can double-click on them in any of the Packet display windows).

I've also posted a matching LoTW prototype version at www.xmlog.com/lotw Hopefully this version addresses most of the remaining LoTW support issues (except for upgrading the reports created by the Awards menu items to provide seperate LoTW/non-LoTW info).

From: Mike McAmis
Topic: 2655 Message: 2656

Hi Joe - XMLog still requires a unique COM port for CW, Packet TNCs, Rotor control, and Rig control.

You can free up the CW COM port if you use a K1EL WinKey USB which is supported by XMLog and most other logging/contest programs.

2657. LoTW Prototype - Version 5.52

Yahoo group: XMLog
Date: 2008-08-11 17:47:21 UTC
From: Mike McAmis
Topic: 2657 Message: 2657

Hi, I've just posted beta version 5.52 at www.xmlog.com/beta and the associated LoTW prototype at www.xmlog.com/lotw

The "Summary" and "Checklist" reports now include a "Show Confirmation Sources" option...

- When this option is enabled for the "Summary" report two additional columns are displayed which show the total number of QSL card and LoTW confirmations for each band/mode. Note that the sum of these two columns can be greater than the value in the "Confirmed" column when you have both a QSL card and a LoTW confirmation for a country (or state) for that band/mode.

- When this option is enabled for the "Checklist" report an additional line for each country (or state) is displayed that indicates the confirmation sources for each band/mode (card, LoTW, or eQSL).

This version also implements a new "Include LoTW Confirmations" option for the DXCC and WAS reports that allow you to either include or ignore LoTW confirmations. Note that this option is now also displayed when you choose the "DX/Update Packet DXCC Status" menu item (sorry, I know this used to be an option-less operation).

I don't have any plans to add any other LoTW functionality so if you feel something else is needed, let me know.

log book ?

Control-A.

After you've filled in all the fields for the entry, click ADD down at the bottom. Then the prog. is ready to take the next entry until you click STOP.

When starting a session, you may wish to pull down the EDIT menu and EDIT DEFAULTS... . You can enter values for the band, mode, power, etc., and specify automatic insertion of the date and time. Click USE DEFAULTS and they'll be filled in to each entry.

From: Craig Bradley
Topic: 2658 Message: 2660

You can also use Edit/Add new entry.

You should also go to Options/Station info and fill that in before added QSOs if you haven't done so.

If you want the stations address imported from QRZ.com or another database, set that up under Options/Callbook setup too.

If you haven't set these options up, you may want to start over, set them up and then import your old logs so the fields will be filled for each entry.

73 & have fun!

2668. XMLog 6.01 and RTTY with the FT100MP

Yahoo group: XMLog
Date: 2008-10-11 23:49:31 UTC
From: Matt
Topic: 2668 Message: 2668

I just acquired an FT1000MP and set up rig control with MLog 6.01. However, when I select a 20 Meter RTTY packet spot from the list of real-time spots in the packet window, the mode sent to the rig is FSK (U) (FSK-USB) rather than FSK(L) {FSK-LSB} - [here is the HEX stream sent to the rig: 00 00 00 09 0C 40 86 40 01 0A]. I verified this by sniffing the serial port and validated that the data sent included the FSK(U) command. The mode should be FSK(L). Clicking on 40 Meter RTTY packet spots results in the correct mode being sent FSK (L) [here is the HEX stream sent to the rig: 00 00 00 08 0C 40 34 70 00 0A].

Clicking on historical RTTY packet spots in the packet window (generated via sh/dx sent to the cluster) actually sent CW as the mode rather than FSK(L) [02 0C]. This also occurs in Mlog 5.49.

Testing with WriteLog demonstrates the FSK(L) for the same spots.

Does anyome know how to fix this?

Thanks!

Matt, WE1H

From: Mike McAmis
Topic: 2668 Message: 2671

Hi Matt, The "FSK" setting is there for rigs that have an explicit FSK mode that shifts the carrier within the transmitter (e.g., does not use audio from your PC and is only for RTTY, not PSK, etc). If you want to drive your rig from your sound card, pick the appropriate USB, LSB, or USB/LSB modes.

Also, if a spot does not contain RTTY, PSK31, or some other indicator in the comment XMLog will not treat it as a data mode spot.

Mike - W1ECT

2672. RE: [XMLog] Re: XMLog 6.01 and RTTY with the FT100MP

Yahoo group: XMLog
Date: 2008-10-12 17:00:49 UTC
From: Matt Atwood
Topic: 2668 Message: 2672

Hmmm... I am using FSK, not AFSK, and the spots do have RTTY as an in-line comment with them, and the FT-1000MP has an explicit FSK mode setting. According to the FT-1000MP manual, there are two HEX commands that can be sent to the rig for the RTTY mode; RTTY-LSB (the 'standard' which is 0C 08) and RTTY-USB (which is 0C 09). Mlog sends the HEX command for RTTY-USB when I click on a real-time RTTY spot (or it sends the HEX for CW (0C 02) when I click on a historical RTTY spot). Using a serial port sniffer, I followed the comms between MLog, my COM port and the rig... when I click on a real-time RTTY spot for 14.086.40 MHz, the application sends the following HEX to the rig:
00 00 00 09 0C 40 86 40 01 0A

which corresponds to

Freq: 14.086.40
Mode: RTTY-USB

What should be sent (according to my understanding of rig control and RTTY operating parameters) is:
00 00 00 08 0C 40 86 40 01 0A

Freq: 14.086.40
Mode: RTTY-LSB

In order for me to work a RTTY Q when I click on a spot and MLog sends the RTTY-USB command to the rig, I have to change the mode to RTTY-LSB and I lose the operating frequency. I have looked at all of the settings in the MP's manual and cannot find anything to fix this. It seems software related. I checked with some other rig control s/w as well and they send RTTY-LSB which corresponds to what I would expect.

Thanks,

- Matt, WE1H

Hi Bill,

I think the problem is that the [and] are used for specifiying a
ranges of values for search keys. For example:

=*[a-c]

would find all fields ending in a, b or c.

It could be that the [a] and [b] are being treated as range values...
(a to a? and b to b?), I'll check...

Barry, to enter a new record click on Edit and the first option is Add New Entry. Fill in the info and then click the Add button. To edit a previous entry click on the Stop button if you are in the ADD mode, then click on Select, enter what you know about the entry then click Select. Scroll to find the entry you want to change then click Modify and change your data.

Bill, your problem may be the way you enter the multiple strings. If you separate them with a comma DO NOT use a space after the comma. Many of us learned to put a space after the comma in typing class, but that does not work in XMLog.

2681. Re: multiple text string searches

Yahoo group: XMLog
Date: 2008-10-23 18:56:29 UTC
From: Bill
Topic: 2675 Message: 2681

I figure out part of this puzzle. You can't use comma or semicolon for
text string searches. To string multiple text string search criteria
just use no separator. For example
to pull skcc and all numbers ending with T
=*skcc**[t]

that will work, but when I add the C, it fails
=*skcc**[t]*[c]

I tried this too:
=*skcc**t*c

What happens is it strings my criteria as AND instead of OR. So, the
above example only returns records with all criteria.(skcc, c and t).
I want to say if contains skcc or c or t, then pull the record.

I'll figure it out, thanks for the help.

Syntax was the problem. This was the correct search string:
=*skcc* *[c-t]
The space is the and operator. This worked.
Thanks guys for helping me think it through.

Subject: [XMLog] "Import/Export XMLog Text File" Feature

Hi - I think it's about time to get rid of the old "Import/Export XMLog
Text File" feature. It was implemented long before ADIF came along and
I think it's about time for retirement (just to remove some menu
clutter). Anybody out there still using it?

I'll also remove the old "Import CT .res" file.

Mike - W1ECT

Mal,

Was the person on the CADXA list commenting about old-fashioned fixed-column human-readable text files, like the old pre-Cabrillo ARRL contest format or the TR log format?

If so, many modern logging programs have this capability. In fact, all of the logging programs I have readily at hand here can export human-readable fixed-column text files:

DXKeeper can export the fields you have displayed on its main log display (which is fully configurable) in tab-delimited format

Ham Radio Deluxe has an Export to ASCII menu item on its Logbook menu that produces a fixed-column human-readable text file

MixW can export a user-selectable set of fields in fixed-column text format

N1MM Logger has an Export (Generic) file format which is a fixed-column human-readable text format

Writelog exports ASCII files in fixed-column human-readable format

XMLog's Display short, medium and long formats are fixed-column human-readable text files

MixW, N1MM Logger and Writelog can also export to Cabrillo, which is a fixed-column human-readable text format

The "XMLog text file" format Mike is proposing to do away with is also fixed-column, but the rows are so wide (466 characters) that this format does not appear to be useful for anything except importing into another copy of XMLog.

Personally I don't see any reason to keep the old XMLog text file format; as far as I can see ADIF appears to serve the same purposes equally well or better.

Jeff, I use XMLog and have installed it on Vista but usually use my XP computer for logging. A problem that I have run into with Vista is programs that will not work in the program directory because of the way Vista handles data files. You need to be administrator on the computer which probably you are and install XMLog in the MLog directory in the root list rather than under the Programs directory.

Hi, As far as I know there's no list of LoTW participants available. This is info only the ARRL could provide. And also, it would be tough to define at what level people were 'participating' - did they only dump in info on some of their QSOs (a dx-pedition perhaps) or do they carefully upload info on all their QSOs.

OK, thanks for the reply.
I was just wondering if xmlog did this.
There are list available.(http://www.hb9bza.net/lotw/)
I know a few other programs that show if the station uses lotw.
I was just hoping xmlog had this feature.
As far as the participation level, I don't think it matters to most
folk. A qsl confirmation in lotw is all that matters.

Thanks again Mike for the info.
Great job on xmlog!!!

Mike, the cluster window that I run under XMLog does indicate participation in LOTW. It is a function of the cluster that I am logged into rather than XMLog. All that XMLog furnished is the connection and the window. I have found the information displayed to not be very useful because it seems unreliable.

Last year you were working on a download from LOTW for confirmed QSOs. Did you finish that and add it to the current version? I have not downloaded for a while and am using version 5.50

I find the info very useful and reliable.
I have been using cluster software for over a year that provides this info.
ARRL provides the list. They spotted station is either listed or not.
Kinda hard to be unreliable.

After saying that, I guess your next question will be, "Why did I change software?"

Cause I like the layout and functions of xmlog better.

Wade, I usually connect to the K5DX cluster using XMLog. I use XMLog for regular logging and N1MM for big contests. I use a couple of specialty logging programs for Ten-Ten and SKCC contests. When I say unreliable I mean that some stations that show to be LOTW users on the cluster do not show any uploads when I do a find call search on LOTW. I have not investigated the reason.

I have been using XMLog for over two years and like it a lot. I need to upgrade to the current version. The version that I am using does not download the LOTW QSL Info from the site and I think that the current version may do that.

It looks to me like something is wrong with QRZ.COM. It does not work with XMLog and it does not work right when contacted directly. QRZ.Com and XMLog are both good about fixing things when they go wrong, so don't give up so easily. XMLog still works except for the QRZ data so I think this is just a temporary hick-up that will pass.

From: Bill
Topic: 2700 Message: 2705

I could use it, but it will not let you double click on the call sign
and fill in the information for you. This happens every now and then
when QRZ changes the layout of the search results page.

Most programs key off the location of each field based on its position
on the QRZ results page. For example, the looked up calls address
should be at character 479, but if they change the layout. The address
is no longer at character 479, so the program cannot match up the
fields it is looking to scrape off.

So, you suggestion to continue to use xmlog is ok. Once the patch is
written, we can all go back and modify each new record that didn't get
looked up. The rest of the qso data will be there. That will be
logging on paper.

In the past when this has happened, the fine folks who maintain xmlog
have usually had a patch out within a week or sooner. Good luck to them.

2708. QRZ.COM problems

Yahoo group: XMLog
Date: 2008-12-11 22:49:52 UTC
From: Mike McAmis
Topic: 2708 Message: 2708

Hi Guys, It not going to be a quick fix, here's the details...

QRZ.COM provides an XML interface to their database which is used by other logging programs to download info from QRZ.COM. To use this interface you must be a subscriber to QRZ.COM ($30/year for this XML interface feature). Instead of using this interface XMLog has been downloading the same web page you would see when you do a callsign lookup and then select "display details". This meant that XMLog had to search through the text of the returned web page to find the appropriate info among all the other junk. This made XMLog sensitive to any changes in the format of that web page.

The latest changes to the QRZ.COM web page makes it impractical to continue to use this backdoor method of circumventing subscriptions. The main data no longer has identifiers (Name, Address, State, etc.) and a Google map image is also displayed which greatly increases the time to create the page and then to download the results.

This means adding support for the XML interface in XMLog. The up-side is that it will be faster and won't have to be diddled whenever the web page format is changed. The down-side is that you'll have to subscribe to QRZ.COM.

Mike - W1ECT

From: Craig Bradley
Topic: 2708 Message: 2709

Mike,

I assume that it means that every user will need to subscribe. If so, XMLog will need to enter our logon info for every lookup or session, correct?

In any case, I think that QRZ.com is a great service and I have no problem with $30/yr. The other choice is to buy CD Roms and update them periodically. I prefer an online service as DXpeditions will have current QSL info. The CD will not be.

I am in favor of the upgrade required for XMLog.

Thanks again for a great program!

Hi Mike,

I guess I don't remember, is QRZ the only game in town as far as call book lookups? If so, I can do without. I'm not going to be forced into paying them for that simple service. I wonder if they would consider letting the authors of logging programs such as yourself join for a somewhat larger fee that we, the users of your program could offset?

thanks and very 73.

Kevin :)

I accept why QRZ has done this, however I am rather non impressed
myself. AA7BQ has an explanation at
http://forums.qrz.com/showthread.php?t=185694
It is no great hassle to visit the website to do a callsign lookup for
the occasional time I use this facility, I am not interested in
continual updates which some of you like. However I feel he has taken
the advert supported approach too far in that I find the ads on the
site are VERY intrusive, with a mixture of jpg and Adobe flash and
configured such that you cannot block them by the common means
(hosts/browser block). Also the totally unnecessary Google Earth
lookup, never been a fan of that myself. As such I don't feel I could
justify $30/year (effectively 30UKP soon at the current exchange
rates...) for this sort of facility.

But thanks to Mike for providing this facility in the past.

When you subscribe to QRZ, you don't see any of the ads - that is one
of the subscription advantages.

Integrated QRZ lookups are VERY important to me. I would be hard
pressed to continue using XMLog if this function is not available.

My 2 cents worth.....

Wayne

Willis the way I read the what the owner of QRZ posted it sounds like he is locking out all logbook software. It's not just XMLog but he seems upset with all the logbook lookups. It almost sounds like his goal is to only allow lookups to paying members of his QRZ site

Yahoo is working for you. We all see your question but only Mike, W1ECT who writes the code and owns XMLog can give you an answer. Mike has come through for us in the past, but these things take time and it has only been two days. Writing code like this is a lot harder than it seems at first glance.

Will you add this "XML interface" to XMLog in the future. I have no
problem with paying the subscription to QRZ.com to be able to get the
information in a manner similiar to what I've been getting from within
XMLog in the past.

That may very well be the case Mal. He has improved some things about QRZ.COM and will still let you look up addresses on the site for free at the present time. If he is tired of many people using the service and not paying I can't say that I blame him. Another person that is providing a valuable service free for many and with volunteer contributions for the rest is Mike. XMLog is a fine piece of software for shareware. The only people that can do anything meaningful about the situation are the QRZ owner and Mike. We have seen what QRZ is doing and we need to allow Mike some time to plan what he is going to do, write the code, test the code and tell us the result. The rest of us can complain or make suggestions, we can read Benny's and others suggestions but our options are only to use XMLog as it is or to change to some other logging program which may have the same problem.

I am confident that Mike is working on the problem. My observation is that he usually does. But, he can't fix the problem while writing responses to the many posts here.

Mal,

If this is what you suspect, then e-mail Fred (owner of QRZ.COM) and ask him direct if this is what he is going to do. I use XMLOG daily and I am standing by until I hear something from Mike.

I like some of the changes that QRZ is trying to do but until all the bugs are worked out I'll just bide my time. I'm in no hurry so why should you.

As for LOTW, It sucks and I do not like it.

Mike

XM log has been a great logging program for me, but running it
without a look up function is driving me crazy! I hate the thought
of subcribing to QRZ at $30. per year. Or changing to another loffer.
Are there any other alternative look up functions that could be
brought to XM log cheaper and quicker?

I have been an active ham for 55 years, am a DXer (DXCC Honor Roll and 5BDXCC), and a rag-chewer at times. I have used XMLOG exclusively (except for specialized contest logging programs) for about 6 years. I use XMLOG to keep my log , maintain my DXCC and other award records, print my QSL cards, upload my logs to the superb LOTW and provide access to to the DX Cluster. I am getting old and senile and undoubtedly am thereby missing the point entirely, but I simply can not comprehend what activities within hamming would raise the necessity for immediate QRZ lookup within a logging program. To be able to do so seems to me like a nicety rather than a necessity. How the absence of this feature could drive one crazy or cause one to change loggers totally escapes me.

Mike is a one-man operation and provides this excellent and powerful logging tool with absolutely no requirement for compensation for its use. My biggest fear is that he will grow weary of this ungrateful, petty whining and the empty threats of some to take their free-of-charge business elsewhere. Mike, I hope you realize that the vast majority of us appreciate everything that you do, and that we realize that forces external to XMLOG may occasionally prevent you from maintaining an "all things to all people" capability.

Keep up the great work. My check is in the mail.

I agree with the sentiments below. I have used Mikes wonderful program for all my logging for a pong time now and appreciate everything he has done - and continues to do with it. For the life of me I don't understand why you just can't open QRZ yourself and look up what you need. I do and guess what - It doesn't hurt me me a bit to do it! If this is all you have a problem with then quit whining and tell MIke thanks for all the work he puts into the program.

Mike, as soon as I'm able the check will also be in the mail.

Topic: 2729 Message: 2729

I would like to use the online QRZ.com instead of the QRZ CDROM that I use now but when I go to QRZ.com it takes a long long time to finish the first screen and then it says that "a newer reader needs to be installed" and offers to install the reader. I answer OK and then it says again "a newer reader needs to be installed" and offers to install the reader. This continues in a loop until I close out the page.
Anyone have any idea the problem is?
Thanks fre Joe W6RLL.

From: Craig Bradley
Topic: 2708 Message: 2730

For those that do not want to subscribe to QRZ.com, if Mike changes XMLog to work with their format, you do not have to subscribe, you can just turn off the call book lookup or choose another option such as buy a CD ROM callbook.

For those of us that want to use the feature, we can choose to subscribe if we wish.

We all have choices and we can vote with our feet and dollars. If QRZ.com starts to loose "clicks", they will not be able to charge as much for ads and they may rethink this. If they get enough subscribers, maybe they can reduce the price.

In any case, XMLog is still a great program with or without QRZ lookup; there is no need to go back to paper.

Just my 2 cents worth.

I accept why QRZ has done this, however I am rather non impressed myself. AA7BQ has an explanation at http://forums. <http://forums.qrz.com/showthread.php?t=185694> qrz.com/showthread.php?t=185694
It is no great hassle to visit the website to do a callsign lookup for the occasional time I use this facility, I am not interested in continual updates which some of you like. However I feel he has taken the advert supported approach too far in that I find the ads on the site are VERY intrusive, with a mixture of jpg and Adobe flash and configured such that you cannot block them by the common means (hosts/browser block). Also the totally unnecessary Google Earth

lookup, never been a fan of that myself. As such I don't feel I could justify $30/year (effectively 30UKP soon at the current exchange rates...) for this sort of facility.

But thanks to Mike for providing this facility in the past.

When you subscribe to QRZ, you don't see any of the ads - that is one of the subscription advantages.

Integrated QRZ lookups are VERY important to me. I would be hard pressed to continue using XMLog if this function is not available.

My 2 cents worth.....

Hi,

Your posts are coming through. I was wondering about the other callbook types listed in XMLog and so I tried them this morning. It appears QRZ.com is the only one with an on line facility. the others all want a file on the computer. I guess we could always buy a callbook CD and have it ourselves but I liked the DX lookups on QRZ. Perhaps some of the other suggestions will turn out effective.

Take care and very 73.

THIS YAHOO THING HAS NEVER WORKED FOR ME. FOR THE TENTH TIME I HAVE TRIED TO ASK ABOUT OTHER CALL SERVERS. WHAT ABOUT WM7D, HAMCALL OR FCC DATABASE? MUST WE USE QRZ.COM AND NO OTHER?

WHY WASTE MORE TIME, WITH THIS NO ONE WILL SEE THIS ANYWAY.

Hi Mike thanks for your comments. For whatever it is worth the VE7CC terminal software still looks up QRZ just fine. If I need/want info on a station, the DX or the spotter, I can still get it, by clicking on the call. I connect the XMlog terminal to the VE7CC terminal 24/7. The reason I do that is because it is much easier to control your local cluster parameters from inside VE7CC,(you just use check marks not commands).

OK settle down guys. Yes I do plan to add the QRZ.COM support using the XML interface. I've got a good start into it and I should have a beta ready in a week or two.

Some of the ads on the site are Adobe Flash ones so you need Adobe
Flash Player to be installed to see them. If you don't want to see the
ads then you don't need it.

For what it is worth, here using Opera I have disabled plugins on
QRZ.COM - and also used 'block content' to block all the other ads. So
I am afraid they won't be able to get any 'click' revenue from me.

Seriously chaps stop all the whinging, not having XMLog lookup is not
the end of the world. I am sorry Mike will only be doing the XML
interface for his program so I will no longer have the feature in the
future, but accept that is the way ahead.

2738. Very odd problem

Yahoo group: XMLog
Date: 2008-12-16 01:44:47 UTC
From: n5pht
Topic: 2738 Message: 2738

Hello,

I have used XMLog for many years and never encountered something like this. (I have over 40,000 qso in XMLog). I was going thru a stack of QSL cards from the Buro (about 50 or 60 cards) and when I tried to search for a particular call (OE5REL) the program would stop responding and I would have to click the microsoft error box (I put 'don't send report')and then restart the program. I duplicated the problem about 7 times. I cannot get this to happen until the "L" is put in the call. That is, I can search for "OE5RE" and that is no problem (just does not find that call because it is not in my log) but the searching is fine. But as soon as I type the L - as in OE5REL it locks up XMLog. I have not tried it with some other OE calls and no problem. But the combination of OE4REL locks it up. Very strange? I don't believe that I have any hot keys set up with the letter L (actually I was using - as I always do - small not caps, like: oe2rel - but I tried it in caps and small with same result) Can anyone else duplicate this? I am using Windows XP. 73 de N5PHT, Gary

From: n5pht
Topic: 2738 Message: 2740

Hello,

OK - for those in the group that likes a mystery. This thing has gotten more interesting. I finally just deleted my entry for OE2REL and thought I would log the qso again and try that. Well, now I cannot log that entry. When I get to the 'L' on the call the program freezes. I even tried a sneaky thing and that has strange results too: I made an entry for OE2RE and then tried to 'modify' the entry to include the L and it locked up. I then exported my entry for OE2RE as an .adi file and then used notepad and modified the .adi file to include the L so the call was correct: OE2REL. Then when I tried to export it back to XMLog a box came up and said it ignored the 'duplicate' entry. I then tried the same thing and told it to NOT ignore duplicate entries and it imported the entry (remember I modified it with the correct call OE2REL) and then searched for the call and it shows only OE2RE and not OE2REL. So, the only conclusion I have reached so far is that I can't log an entry for OE2REL! Very strange. And, for the what it is worth department, I have 109 OE* logs (Austria) so it handles OE just fine. I tried lots of other calls with REL on the end: G2REL, W5REL, etc. and that is fine - no problem and no freeze. I also searched for any call with REL on the end and I actually have a real call in data base: K7REL. (the G2REL and W5REL I made up to try).
Lastly, (I know I have gotten obsessive about this thing) I tried to search for OE2RE_ with _ different letters of the alphabet and all other 25 letters work fine - but as soon as I type in the L - it freezes!

Oh well, not worth worrying about much - just curious.

2741. RE: [XMLog] Get frequence/mode rig respose too short

Yahoo group: XMLog
Date: 2008-12-17 00:31:26 UTC
From: Craig Bradley
Topic: 2737 Message: 2741

Evan,

Make sure that the communications parameters (baud rate, bits, parity, etc.) match. I have seen this message when the parameters are not the same or the first time after changing them. If you start and new QSO and see the message, click Clear and see if it reads the correct frequency, mode, etc.

When you change the baud rate on the TS-480, exit the menu and then cycle the power on and off.

Use 8 data bits, 1 stop bit, parity none, Flow Control None, for Kenwoods. I use 19200 baud, but the default for the 480 is 9600.

I hope this helps.

73,

2742. simple question

Yahoo group: XMLog
Date: 2008-12-17 03:47:42 UTC
From: n5pht
Topic: 2742 Message: 2742

Greetings,

I just know this must be in the help files but can't find the proper setting. When I right click on a packet cluster call and then left click on 'start new log entry' the mode and frequency from the packet cluster is entered into my log entry. That is perfect. But where is the settings to control that feature? It is not in the 'edit defaults for new entries' settings (The setting to get those from the rig is there but I do not have rig control).

I was helping a friend set up XMLog for the first time and when he clicks on a cluster entry and starts a log entry the mode and frequency do not show up. It does with me (even if my rig is turned off) and that is good - how do I set this up? Again, I do not have 'get mode from rig' or 'get freq from rig' because I do not have rig control set up.

Thanks,

Gary, N5PHT

YOU WANT TO CLICK THE RADIO BUTTONS ON THE "EDIT DEFAULTS FOR NEW ENTRIES SCREEN". IT IS LOCATED UNDER "FILE" ON THE MAIN LOG SCREEN. "USE DEFAULTS FOR NEW ENTRIES" MUST BE CHECKED ALSO.

GOOD LUCK

Craig,

TU for the suggestion, however it didn't work. I think the problem
was with that virtual port because I can't get any other communication
type software to run on it either.

I wanted to see if the freeware would work before I spend $$ on a
commercial product. I guess I have to figure out something else with
the situation.

From: Kevin Nathan
Topic: 2745 Message: 2745

Hi All,

I'm hoping someone here who has used packet clusters a lot might be able to help me. I keep getting disconnected from my local packet cluster. I thought it might be XMLog doing it because it happens on more than one cluster I've tried but I also tried telnetting into my local cluster and got the same result. Can anyone suggest why this might be happening and what I could do to cure it?

thanks much and very 73.

I don't know about you, but my ISP is totally unreliable. Since the cluster sends packets every time there is a new report, if you are not connected at that time you will disconnect. Since I am on Comcast and my local cluster is on Comcast, I think it is Comcast doing it.

From: Mike McAmis
Topic: 2745 Message: 2749

Hi Kevin, Some PacketCluster nodes are configured to disconnect you after a certain period of inactivity on your part - perhaps your cluster is set up this way. To deal with this problem XMLog has a "Keep Alive" timer that can be set up from the "Options/Packet Options and Port Select" menu item. This feature justs sends something to the cluster every once in a while to keep it happy.

Hi Gary, I must admit this has to be the strangest problem ever (and thanks for checking out all the variations). As you might have guessed I can't duplicate the problem here. If you have any other XMLog windows besides the log window open you can try shutting them all down before entering the call (esp. the Show QSOs... window).

If that's not it the only other things to try would be creating a temporary new log file and try entering the call there. If that works ok then you might try a "File/Repair Log" on your main log.

Other than that perhaps a re-install of XMLog?

Mike - W1ECT

From: Mike McAmis
Topic: 2742 Message: 2751

Hi Gary, XMLog extracts the frequency and mode from from the cluster spot when you right-click on the spot and pick "Start New Log Entry for ...". There's no way to toggle this feature on/off so it should always do this. I don't know why it didn't work for the other installation. Perhaps the cluster he connected to formatted the spots differently? Doesn't sound too likely though.

2752. QRZ.COM feature - Almost

Yahoo group: XMLog
Date: 2008-12-19 18:15:27 UTC
From: Mike McAmis
Topic: 2752 Message: 2752

Hi, I created a version of XMLog the uses QRZ.COM's "XML Data Access" feature. Unfortunately the installer I use for XMLog can't seem to handle the Windows module I use (MSXML).

So, I'm looking into using another installer and this could take some time (finding one and getting it to work with XMLog). In the meantime there is something some of you might want to try.

If you check your \Windows\System32 folder and find you already have msxml4.dll installed you can try my beta version. It's not unusual to find it already installed since it was included with various versions of Internet Explorer and other MS applications. Note that it has to be msxml4.dll, not msxml3.dll, etc.

If you want to give it a try I've posted the zip file in the beta area but I didn't put any link to the file there (I didn't want the general public to see it). So you can get it directly from:

www.xmlog.com/beta/xmlog605.zip

To enable the XML feature go to QRZ.COM and first create a User-ID and password for yourself (remember that passwords are case sensitive). After logging into QRZ.COM with your id/password pick "Subscriptions" from the list on the left of the QRZ.COM home page. Then you need to subscribe to "XML Data Access" ($30/year) or any other option that includes XML Data Access.

Now start up XMLog and use the "Options/Callbook Options" and enter your QRZ.COM id/password.

Hi Mike,

I had msxml4.dll in my system32 folder so I installed the new version. It works just fine. I stepped through my log file doing Ctrl F's to force lookups for the missing info. Everything is up to date now.

Using XML should eleminate any problem if (when) QRZ changes formats in the future. Thanks for the quick and seamless fix!

Hi, Sorry, the way Microsoft has things set up for MSXML is wierd. Each version is unique and there's no way (as far as I know) to access the 'latest' version. I picked version 4 since supposedly it's the most universally available. If you're motivated enough I'm sure you can scrounge around Microsoft's site and find an install download for MSXML 4...

Hello Mike,

I installed XMLOG605 and it works great. Since I am a blind ham I was having problems without the QRZ information added automatically.

Thanks again for the quick fix.

Subject: [XMLog] QRZ.COM feature - Almost

Hi, I created a version of XMLog the uses QRZ.COM's "XML Data Access" feature. Unfortunately the installer I use for XMLog can't seem to handle the Windows module I use (MSXML).

So, I'm looking into using another installer and this could take some time (finding one and getting it to work with XMLog). In the meantime there is something some of you might want to try.

If you check your \Windows\System32 folder and find you already have msxml4.dll installed you can try my beta version. It's not unusual to find it already installed since it was included with various versions of Internet Explorer and other MS applications. Note that it has to be msxml4.dll, not msxml3.dll, etc.

If you want to give it a try I've posted the zip file in the beta area but I didn't put any link to the file there (I didn't want the general public to see it). So you can get it directly from:

www.xmlog.com/beta/xmlog605.zip

To enable the XML feature go to QRZ.COM and first create a User-ID and password for yourself (remember that passwords are case sensitive). After logging into QRZ.COM with your id/password pick "Subscriptions" from the list on the left of the QRZ.COM home page. Then you need to subscribe to "XML Data Access" ($30/year) or any other option that includes XML Data Access.

Now start up XMLog and use the "Options/Callbook Options" and enter your QRZ.COM id/password.

XMLog Group:

I did not find the dll on the MS site, but I am sure it is there somewhere.

Here is another link to download MSXML4.dll:

http://www.dll-files.com/dllindex/dll-files.shtml?msxml4

This is from dll-files.com. I did not download or install this dll from here. So use with caution!!

2760. QRZ revisited

Yahoo group: XMLog
Date: 2008-12-19 23:14:52 UTC
From: N7mal
Topic: 2760 Message: 2760

Last week I posted this comment regarding the QRZ fiasco: ""For whatever it is worth the VE7CC terminal software still looks up QRZ just fine.""
Well I wondered why because there was no up-date to VE7CC software. I did some investigating and chatting with fellow DXers who, daily, use VE7CC software. The answer, of course, immediately jumped out at me.
I am not a programmer and don't pretend to be. But I think, in my simple mind, it only takes a small modification to only one line of code and all will be well again.
Here's what I found: When you go to QRZ you can no longer immediately type in the call you want to look-up. You have to wait about 5 or 6 seconds. The VE7CC software has always been a little bit slow looking up calls and it still is,,, but it hasn't gotten any slower. The way my system/house is configured we connect all the computers through a router and then on to the i'net. I watched the ''''idiot'''' lites on the router. VE7CC makes 2 transmissions to get to QRZ. I assume (ass/u/me) one is the connect to QRZ and the
second, several seconds later, is the call to be looked up. XMLOG makes only one
transmission. I have to assume (ass/u/me) that is the problem, XMLOG is asking for the call look-up at the very same it connects to QRZ.
Again just my -2cents worth

From: kd2mx_nj
Topic: 2752 Message: 2761

I didn't have a copy of msxml4.dll but I DL'd it from dll-files.com and dropped it into the system32 directory. Installed the update (ignored the registry error), paid my dues and it works like a charm.

The QRZ lookup is a very important feature to me and I don't mind paying a fee for the service. I didn't mind it being free either but once the feature was gone, its value was immediately apparent. I also made a donation to Mike in thanks for his quick response (again) in putting out an update for a QRZ change.

Subject: [XMLog] Re: Packet Cluster Problem

Hi Kevin, Some PacketCluster nodes are configured to disconnect you after a certain period of inactivity on your part - perhaps your cluster is set up this way. To deal with this problem XMLog has a "Keep Alive" timer that can be set up from the "Options/Packet Options and Port Select" menu item. This feature justs sends something to the cluster every once in a while to keep it happy.

2771. LOTW and multiple callsigns / v 6.05 log screen

Yahoo group: XMLog
Date: 2008-12-22 00:14:24 UTC
From: hamman992003
Topic: 2771 Message: 2771

I was playing with the new LOTW features in V6.04 (i see there is a version V6.05 but have not tried it yet). I did a download/validate LOTW data and got a huge adi file (3,730Kb)and a report file (278KB). I have a lot of QSOs on LOTW and I have 3 callsigns (two from DX operations). well, the adi file includes qsos from all 3 callsigns. the error report is huge, because every qso with the other dx callsigns is marked as "No matching entry in log". I read that if I try "apply LOTW data to log" I'll have to respond to each instance of no match. It seems that the fields in the adi file "<APP_LoTW_OWNCALL:4>xxxx OR <STATION_CALLSIGN:4>xxxx" should be checked to see if they agree with the callsign in the xmlog log file.

I have to offer my opinion on the new layout of the xmlog screen. the QSO/qSL info box takes up way too much room for my taste. I'm using an older laptop. Why is the name field so long? eqsl is of very limited interest to me. I confirm eqsl only when asked or if i see others have sent me their eqsl, so the extra space taken by that is not worth it in my opinion. i put the packet window side-by-side with the log window and keep the bandmap below these two. now with the bigger log window, i cant see everything like i could in the earlier versions. i will probably go back to the "pre LOTW" version. maybe everything from "QSL sent" to "qSL via" could be moved to another screen, like the "Show Award Info" screen ? and just keep the old familiar log window.

I love xmlog and have been using it for years. my log file has over 95,000 qSOs, starting in 1968 (I put in old data from old qsls). I recommend it to all my friends. 73 and thanks for a great program.

John - KC2QJB,

Yes, I am using ver 605. The name, address, and city are being filled on the screen that has a box titled 'Address'. In the lower left corner of the screen, click the button and it changes the lower half of the screen to display Address or QSO/QSL Info or Awards Tracking.

I just noticed that under the QSO/QSL Info box, Name is NOT being filled as it was in prior versions. Also at the top of the screen QTH is also not being filled and I think it was before. As I mentioned above, the Name and mailing info is being filled when the Address button is selected.

Hope this helps John.

Evan,

I am using the microHAM USB router that creates virtual comm ports with no problem. It may be the particular software that you have. Anyway the message that you got indicates that XMLog did not get a proper message with rig parameters and a communication problem will cause this.

What software are you using?

Good luck & Happy Hollidays.

Craig,

TU for the suggestion, however it didn't work. I think the problem was with that virtual port because I can't get any other communication type software to run on it either.

I wanted to see if the freeware would work before I spend $$ on a commercial product. I guess I have to figure out something else with the situation.

Seasons Greetings,

2777. RE: [XMLog] Rig Response 3 Revisited

Yahoo group: XMLog
Date: 2008-12-22 17:51:53 UTC
From: Craig Bradley
Topic: 2746 Message: 2777

Evan,

XMLog is complaining about the number of characters received on the serial port. A complete message should have 38 characters. The message is an ASCII text message (human readable). I don't have my 480 manual handy but it think that there is a section in it that talks about serial commands and responses.

XMLog sends a command that asks for the frequency, mode, etc. and expects a predefined response message. There is also a command that you can send that will cause the rig to output this data periodically or when it is changed. You can use the Windows program HyperTerminal to try these out if you want.

73,

Kevin (K7RX),

Yes, you are correct. You must be a 'subscriber' or paying member of QRZ.com to access info via XML lookup. After subscribing, enter your QRZ username/ID and password in XMLog under 'Options' - 'Callbook Setup'. Click the radio button 'QRZ.com' and enter your personal information. Click 'Save' and you are in business:)

Display any entry on the XMLog screen and then press 'CTRL F' to force a QRZ.com name lookup. This will fill in any blank fields on QSO's made while XMLog was not working with QRZ.

Good Luck!

Wayne

2783. PAST VERSION

Yahoo group: XMLog
Date: 2008-12-23 01:22:06 UTC
From: N7mal
Topic: 2783 Message: 2783

I am really a 'dummy. I broke every rule about downloading/installing beta software. I need to be able to go back 2 versions ago, 6.04 I think.
Is there anyone who can send it to me at n7mal@...
Thanks in advance.

2787. XMLog 6.08 beta

Yahoo group: XMLog
Date: 2008-12-23 19:40:04 UTC
From: Craig Bradley
Topic: 2787 Message: 2787

Hi Mike,

I downloaded 6.06 yesterday and did the LoTW update, all went well. This was the first time that I had done this as I have been too busy for the last few months. My last version was 4.56.

Today I downloaded 6.08 and subscribed to QRZ.com, that worked well also, although it is hard to find where to sign up on the QRZ site, you would think that they would have that "up front".

I felt bad sending QRZ money and not to you after all of your hard work, so I sent you a small donation via PayPal.

Happy Holidays and keep up the great work!

73,

- Craig, AE6RR

2790. Re: LOTW and multiple callsigns / v 6.05 log screen

Yahoo group: XMLog
Date: 2008-12-23 22:18:08 UTC
From: Mike McAmis
Topic: 2771 Message: 2790

Hi Terry, You wrote:

I was playing with the new LOTW features in V6.04 I have a lot of QSOs on LOTW and I have 3 callsigns (two from DX operations). Well, the adi file includes qsos from all 3 callsigns. the error report is huge, because every qso with the other dx callsigns is marked as "No matching entry in log". I read that if I try "apply LOTW data to log" I'll have to respond to each instance of no match.

I'm very far from an expert in using LoTW, I've just dabbled with it and have let others guide me as to what's needed. Does the ARRL download let you do any filtering that would allow you to download an LoTW/ADIF file without the callsigns that don't appear in your log? You're not required to use LoTW/ADIF files downloaded using XMLog's menu item - it can validate/apply files downloaded via the ARRL web pages.

If not, perhaps I need to add a callsign filter to the LoTW validate/apply menu items?

I have to offer my opinion on the new layout of the xmlog screen. the QSO/qSL info box takes up way too much room for my taste. I'm using an older laptop.

I must say I also liked the older/smaller screen layout better (space is the final frontier). I did lot's of experimenting with screen layouts when the push for LoTW support became to strong to resist. Going to a bigger monitor here has helped a bit but I think I'll bite the bullet at some point and add a second monitor. Perhaps you can try that on your laptop, I've seen that there are USB 2.0->VGA adapters that are pretty inexpensive (don't know anyone who has tried one, and if your laptop isn't fairly new it will only have a USB 1.1 port).

2794. VISTA - working!

Yahoo group: XMLog
Date: 2008-12-30 11:32:00 UTC
From: n5pht
Topic: 2794 Message: 2794

Hello,

I have had some success with using VISTA OS and XMLog and after reading several posts on this group and a little tweaking myself it seems to be working all ok:

1- install in root directory (not sure how I finally managed to do that)
2- right click on the icon and use 'run as administrator'
3- right click on the icon and run as Windows ME (running as XP did not work for me)

After the above I am using the packet window and the log and qso windows with no problem. I don't know about other windows. Before the above I could not close the program without going to task manager each time. Now it closes just fine.

Thanks for the past post on this - really helped.

Mike - any more ideas on the interface progress for the XML option for QRZ.com?

Gary, N5PHT

I am using version 6.08 and it works FB for me. I just entered TS7C in the log window and another little window popped up showing my two contacts with them.

Maybe you should try an update.

Nelson

Go to Options-Call Book Setup and check the none block. This will stop it from trying to look up the information.

Mike, I am trying to do a search of the comments box and the frequency box then dump the data to an Excel file to sort the data for awards that are not supported by XMLog and not common enough to expect you to write code. I may be just having a brain lock and forgetting which menus I used to get the dump. Could you just tell me which menus I need to look at?

2816. XMLOG AND QRZ WITHOUT PAYING ANNUAL FEE

Yahoo group: XMLog
Date: 2009-01-13 04:24:44 UTC
From: Benny Owens
Topic: 2816 Message: 2816

HI

I FOUND AN OLD QRZ CD. I INSTALLED IT AND IT STILL WORKED AND IT ACTIVATES THE LOGBOOK WINDOW MAIL LABEL BUTTON WHEN YOU LOOKUP A VALID CALL. JUST FOLLOW INSTRUCTIONS TO COPY DATABASE TO HARDDRIVE AND PUT THE CD BACK IN THE DRAWER. YOU CAN VERIFY THE ADDRESS AT QRZ.COM FOR FREE AND CUT & PASTE A NEWER ADDRESS IF NEEDED. THOSE WHO HAVE MORE TIME THAN MONEY MAY WANT TO TRY THIS METHOD. I WAS ALSO TOLD THAT YOU COULD DOWNLOAD A COPY FOR ABOUT $20 BUT HAVE NOT CHECKED OUT THIS OPTION YET.

WITH LOTW MAILING LABELS MAY NOT BE USED AS MUCH IN THE FUTURE.

2817. LoTW and version 6.09

Yahoo group: XMLog
Date: 2009-01-13 18:30:12 UTC
From: Mike McAmis
Topic: 2817 Message: 2817

It seems that the new 6.09 feature that checks to see if an LoTW file has QSOs you've made using multiple callsigns broke things for the normal case - If you only used a single callsign all the data in the file was ignored. I've posted version 6.10 with a fix at:

www.xmlog.com/beta

Mike - W1ECT

2818. Lookups Revisited

Yahoo group: XMLog
Date: 2009-01-14 00:07:35 UTC
From: N7mal
Topic: 2818 Message: 2818

Well the lookups are broken again.....
Here is exactly step-by-step what I am doing and what I am seeing:
I am in the packet-cluster terminal window.....
I right click on a callsign that has been spotted.
For example W1ECT was spotted. I right click on W1ECT. A dialogue box pops up with several options. I then click on this option:
"Show QSOs+Check Call for W1ECT"
I get W1ECT for about 2 seconds then it reverts to the last call I logged in the logbook, in this case it shows G4AMN. It gives me all my previous QSOs etc for G4AMN.
Now if I click on the option "Display all entries for W1ECT" I get all my previous QSOs for W1ECT. That option still works perfectly.
Also if I click on the option "Start Log Entry for W1ECT" it still works.
The only function that is broken is "Show QSOs+Check Call for W1ECT"

These functions all worked perfectly before the QRZ stuff started.

I hope this time I've explained myself. I will gladly proved screenshots etc if it would be helpful.

2819. Another lookup service

Yahoo group: XMLog
Date: 2009-01-14 01:05:44 UTC
From: Tim Wright
Topic: 2819 Message: 2819

My question is this: Why can't XMLOG use the FCC data base or a program like pathfinder to lookup calls and insert the info into the logs?

I'm not a programmer but would be interesting, to me, to find out why other online lookup engines couldn't be used.

Hi Dave,

QRZ.com recently went to a format where you have to join them for $30 a year. Otherwise, without a user name and password, lookups don't work any more. Sorry to tell you that.

Take care and very 73.

Kevin :)

From: Mike McAmis
Topic: 2806 Message: 2823

Hi,

To automatically sign on to a PacketCluster node when you start XMLog:

Choose the "Packet Options and Port Select" menu item and

Under the "Options" Tab: Set "Show Packet Window when XMLog starts"

Under the "Port" Tab: Fill in the address of your PacketCluster
node - or - enter the filename of your login script (node file).

A sample of a node file (netk1ea.nod) would be:

```
rem
rem Internet DXSpider PacketCluster at K1EA
rem
connect dxc.k1ea.com 7300
match login:
send #me
match de K1EA
send set/page 0
send dir/new
```

Check the help file for more on node files and setting up your
PacketCluster login options.

Hi Mal, This seems to be an old bug, I'll post a fix sometime soon. It only happens when the Show QSOs... window is first displayed with that pop-up menu. If the Show QSOs... window is already showing the problem doesn't occur. And by the way, if the Show QSOs... window is already displayed a normal single-click on a call in the Packet Window is all that's needed to update the Show QSOs... info.

Check the Show QSOs... help info for a list of the myriad ways that this window is updated.

Hi Mike,

I realize that the continent is not in the log file, but I thought that the continent was in the country (entity) database. If so, could it be looked up and included in an Excel report? Is the the country in the log file database or does XMLog index/lookup the country name from the prefix when reports are generated? If a lookup is done during the report generation, it seems that picking up that field would be easy. If it just generates the report from the log file database, then I understand that this would be more difficult.

BTW, IOTA requires a contact from each continent, does XMLog check that in the IOTA reports?

2830. Beta version 6.12 - QRZ.COM via HTML

Yahoo group: XMLog
Date: 2009-01-20 18:15:35 UTC
From: Mike McAmis
Topic: 2830 Message: 2830

OK, I've re-instated support for QRZ.COM lookups via HTML (properly referred to as a "screen-scraper" I'm told). This change is implemented in version 6.12 currently available at www.xmlog.com/beta

There is a new callbook type "QRZ.COM via HTML" available by using the "Options/Callbook Setup" menu. People like myself that previously opted for QRZ.COM lookups via XML will have to go to this menu and set the callbook type to "QRZ.COM via XML".

FWIW the XML lookups are noticeably faster that the HTML lookups (using my dial-up Internet connection).

I'm not 100% confident that the new HTML code handles all variations so if there is a call that can be looked up at the QRZ.COM web page but not via XMLog/HTML, let me know the call.

2841. Re: [XMLog] Version 6.12 with QRZ.com set up for HTML

Yahoo group: XMLog
Date: 2009-01-25 21:25:24 UTC
From: k2qmf@juno.com
Topic: 2836 Message: 2841

Hello All,

I found out what was causing my problem with QRZ.com / HTML.

When I turn off my Kaspersky Internet Security Program XMLog works
great!!!
With it on the look up just times out...

But I have no idea how to fix it!!
It is not the firewall. I can turn off the firewall and still
not be able to look up any calls. I have to disable the complete
security program to get it to work...

Any suggestions much appreciated...

73,
Ted K2QMF

Hi Ted, I was just about to post a message here suggesting that perhaps the problem might be due to some security software. A lot of the programs let you configure your firewall to give access on a program-by-program basis. But also, the programs I've used at least give you a dialog box letting you know that the program has been blocked.

Hi Barry, Well one thing - I've done some more testing here and found the XML is a LOT faster than the HTML. Really obvious on my dial-up line. Very useful if you use the "fill in log entry values from callbook" option.

Hi Mike,

Personally, I didn't pay QRZ.com and I'm glad to see the HTML back. It doesn't seem any slower than things used to be here and works very nicely for me. It's also nice not to be held at the mercy of QRZ.com.

thanks again and very 73.

Yahoo group: XMLog
Date: 2009-01-30 17:09:34 UTC
From: wb6cyk
Topic: 2846 Message: 2846

When using the Date and Time default from my computer after entering control-A and the station I am calling, is there an automated way to have the program change the time field to the current time when I exit the record? I have been entering the time manually on receiving the callback. This would work a lot faster for general logging if I didn't have to use the mouse. This is only a problem for me when I am working CW.

Burton, if you double click on a time or date box it will enter the current time or date as indicated by your computer clock and the offset that you have selected. Or you can use Control D to set the Date and time to current date and time.

2848. XMLog - Close Sound Card Window

Yahoo group: XMLog
Date: 2009-01-30 22:27:42 UTC
From: jwyoung030240
Topic: 2848 Message: 2848

Lately the above named window has been popping up saying:
"Couldn't close wave device, Status = 33"

I click "OK" and the window goes away only to appear
again a short while later.

What do I do to correct this minor problem?

73 de Joe/W6RLL.

Hello Mike,

Since I am blind the version number could be a problem, I thought the version was read to me in the past with my screen reader not hearing it anymore. The best that I can tell you is that the version is the one you first fixed the QRZ problem and asked that people try it.
Should I download your latest version and try again?

Hi John,

I can't remember right now how to do it either. I believe you would write it something like:

>=2/*/09

There is a whole section in the docs for XMLog that talks about how to write search strings. I usually have to refer to this before I do a log search preparatory to uploading to LOTW. <GRIN>

Take care and very 73.

Just use >=2/1/09 and you will get all of the QSOs from Feb 1 on (I assume that you don't have any March QSOs yet :-)).

Or if you just want one month use >=12/01/08,<=12/31/08.

See the help file under Numeric Field Search Keys - Using Ranges.

Topic: 2858 Message: 2861

I am a very active contester so I do this routine several times a year. At the end of every contest I import my contest log into XMLOG. After I do all the rest of the contest housekeeping I export from XMLOG to upload to LOTW. Last weekend after the sprint contest was over I needed to export for upload to LOTW. The last contest was the 25th of Jan. In between I've worked a bunch of DX so I needed to also uploaded it to LOTW.
To make a long explanation even longer in the search I typed the following into the date field:
=>01/26/09

I exported an ADIF file with everything from the 26th of Jan to the 8th of Feb.

Hope that helps.

2866. cw keyboard window won't close

Yahoo group: XMLog
Date: 2009-02-13 14:05:13 UTC
From: Bruce Winkelman
Topic: 2866 Message: 2866

Good morning from a new member. I was poking around the XMLog program last evening, exploring those areas I haven't used. I opened the CW keyboard window even tho I don't have a keyboard, sending only with a keyer. When I try to close the window either using the "X" in the upper right corner or unchecking the "CW Keyboard Window" from the "View" drop-down menu, I get a "XMLog stopped working" window, asking me to close the program. Last evening I was using an older version 5.49, when I was poking around. I downloaded and installed 6.13 this morning with the same result. I am running Vista, not XP. My guess is that XMLog is looking for the keyboard when I try to close the window but can't find it so the program crashes. Any suggestions or fixes? Thanks in advance!

Try this:

control panel
system
hardware
device manager
ports
com (your choice)
port settings
advanced
com port number

hope that works

2872. Problem importing from DX keeper

Yahoo group: XMLog
Date: 2009-02-15 17:10:05 UTC
From: Michael McCarthy
Topic: 2872 Message: 2872

I am running XMlog 6.13 and I am trying to import an ADIF from DXKeeper. First I modify the adif by changing all occurances of "<QSL_Rcvd:1>V" to "<QSL_RCVD:1>Y <DXCC_SUBMIT:8:D>19930216 <DXCC_ACCEPT:8:D>19930216". Everything appears to go well but none of the awards info gets updated. Please help. I want to get back on XMlog and don't want to have to enter the awards info by hand (again!).

Mike, I have noticed that the QSLs entered into the LOTW block do not seem to update the awards. I notice that your QSL RCVD is Y. XM Log expects a date. Maybe that is the problem.

2874. Control-D

Yahoo group: XMLog
Date: 2009-02-15 17:28:01 UTC
From: WILLIS COOKE
Topic: 2874 Message: 2874

I now have communication between my K3 and XM Log. XM Log does not communicate automatically with the K3, ie, when I tune or change bands, it requires a double click to update the frequency and mode information. The date and time also do not update automatically, but stay the same as when when Add New Entry was selected or the last contact was added. Control-D will update the date and time block, but another action, such as double click is required to update the frequency and another double click is required to update the mode. I think it would be a good thing to have the program read the K3 when Control-D is used to update the date, time, frequency and mode.

Topic: 2872 Message: 2875

No, it still needs <QSL_RCVD:1> Y. Date is optional and changing it this way doesn't account for some of the entries that have QSLRDATE's set already. Importing an old ADIF file I saved from XMLOG long ago is formatted as above and seems to work, so there is something else in the file that is messing things up.

For instance, the following line (from modified DXkeeper export) doesn't import the awards info as well as EQSL or LOTW (which I don't care about right now)...

<Band:3>20M <Call:5>G4WNE <DXCCPrefix:1>G <DXCC:3>223 <Freq:6>14.000 <Mode:3>SSB <Operator:6>WA1UAR <QSL_RCVD:1>Y <DXCC_SUBMIT:8:D>19930216 <DXCC_ACCEPT:8:D>19930216 <QSL_Sent:1>Y <QSO_DATE:8>19850807 <TIME_OFF:6>234000 <TIME_ON:6>234000 <QTH:5>HOME, <RST_Rcvd:2>58 <RST_Sent:2>59 <TX_Power:3>100 <CQZ:2>14 <STATION_CALLSIGN:6>WA1UAR <OWNER_CALLSIGN:6>WA1UAR <EQSL_QSL_SENT:1>R <LOTW_QSL_SENT:1>Y <LOTW_QSLSDATE:10>2007-05-29 <EOR>

But this one does (from old XMlog export)

<QSO_DATE:8:D>19850807 <TIME_ON:4>2340 <CALL:5>G4WNE <FREQ:6>14.000 <BAND:3>20M <RST_SENT:2>59 <RST_RCVD:2>58 <MODE:3>SSB <TX_PWR:3>100 <CQZ:2>14 <QTH:5>HOME, <DXCC:3>223 <QSL_SENT:1>Y <QSL_RCVD:1>Y <DXCC_SUBMIT:8:D>19930216 <DXCC_ACCEPT:8:D>19930216 <EOR>

Did you do an Update Packet DXCC status?
Did you try filling in the blocks manually to find which one was causing the trouble?

First a few notes about the ADIF fields "QSL_RCVD" and "QSLRDATE".
If "QSL_RCVD"="Y" or a date is provided by "QSLRDATE" this will
result in XMLog setting the QSL Rcvd field for the log entry. If no
date is provided by "QSLRDATE" but "QSL_RCVD"="Y" then the date will
be set to "?".

The same logic applies to "QSL_SENT" and "QSLSDATE" (as well as all
the LOTW/eQSL counterparts "LOTW_QSL_RCVD"... and "eQSL_QSL_RCVD"...).

DXCC_SUBMIT and DXCC_ACCEPT are only used for tracking DXCC award
submissions to the ARRL.

Once either the QSL Rcvd or the LoTW Rcvd field is set the associated
QSO should be treated as confirmed. *** However in the case of LoTW
confirmations be sure to set "Include LoTW Confirmations" when the
various reports display their options dialog.

I was making that path Wayne. What I was not doing was to select the port that my USB adapter was using then select Change Ports, then change the port to a lower one and ignore all the warnings that my computer would self destruct if I went any further.

OK, I thought you meant that the QSOs were not being treated as confirmed.

I've checked the code and I think I see what's going on. The DXCC_SUBMIT/ACCEPT fields are not standard ADIF fields. XMLog assumed they had to be from a file created by an XMLog ADIF export. So, it was checking for the XMLog version that is contained in the header area of ADIF files created by XMLog. When it saw no version it ignored this XMLog-specific info. I think for the moment you can hack in:

ADIF Export from XMLog Version 6.13

before the <EOH> section of the file and that should do it. I'll see about removing the version check altogether for the next release.

From: WILLIS COOKE
Topic: 2874 Message: 2884

I don't think another menu item would help me. I just found out about Control-D after two years of double clicking on the time and sometimes the date. Drop down menus are not very convenient for things that need to be done for every QSO. Double clicking on the box is more convenient than a menu item. I was hoping for a single Control key function that would take care of all four things that need to be updated frequently. The time and frequency need an update for almost every QSO.

All,

I just did something very stupid. I had selected a QSO in my log and ** thought ** I clicked on "Delete current entry" but I actually selected "Delete selected entries" and deleted all of the QSO's in the entire log. I have a backup from yesterday but I lost all of my QSO's from today (Including several K5D QSO's for which I do not know the times). I looked at the backup that seems to have been created at the same time I did the delete and I can see that the log data looks ike it is still in there, I just cannot get to it from MLog. Any help would be appreciated.

Or am I just toast?

Thanks in advance,

- Matt, WE1H

Hi Matt, You need to copy the backup of your log file from
the "Backups" folder located within the XMLog install folder (usually
c:\mlog) - copy the file from there to the install folder. Then delete
the trashed log file and re-name the backup to the appropriate name

Thanks Mike, I tried that, but I am obviously thick ;-) ... here is the deal.

I seem to have deleted the contacts at 1615 Local yesterday and a backup file was created at the exact time. The backup file is 4.9MB just like the log file (so I presume that all of the QSO's are still in there, but just flagged as deleted maybe). When I look at the backup file in "notepad" it looks like there are a bunch of QSO's (including those from yesterday - presumably that is since I cannot see the date and time). if I try and open that file im MLog, it states that there are no QSO's in it. My goal is to get the QSO's I made between the previous backup date 2/16 at 1629 local and when I deleted the QSO's on 2/17 at 1615 Local. Following your directions did not seem to yield that result.

Is it even possible to get them back?

Matt, WE1H

Hi Matt, Yes - the file size won't be reduced unless you do a "File/Compact Log". The log files are Microsoft Access databases (Access 95 format). You can open them using later versions of Access but you will get a complaint saaying that the database can't be updated. What that really means is that you can't change the field definitions, etc., you can change the data (although bad formatted data entered this way can cause problems for XMLog). You also may be asked if you want to update to a later format, don't... There may be some utility out there that can restore deleted records but Access itself doesn't seem to have that facility. It seems as though you are stuck with going to a previous backup.

2890. Packet Cluster Disconnects

Yahoo group: XMLog
Date: 2009-02-20 17:26:48 UTC
From: Kevin Nathan
Topic: 2890 Message: 2890

Hi All,

I have mentioned this problem once before but have since done some experimentation and am looking for feedback. First, the setup. I am running a home network using a Belkin router with three machines connected, two via hard wire.

Second, the problem. I keep getting randomly disconnected from my packet cluster. I have tried two different clusters with XMLog and also with Telnet with the same result. The error I get is an Error 1053 that the connection has been lost. This might happen a few minutes into the connect or sometimes a few hours after the initial login. There is no pattern to it I can detect. I am now under the suspicion that the problem is perhaps my router.

Has anyone on the list experienced these random disconnects? if so, what might I need to change in my router settings to prevent them?

thanks much for your assistance and very 73.

Kevin :)

Absolutely Kevin. I don't think it has anything to do with XMLog or your computer. I experience frequent disconnects from the cluster which I access through XMLog and Yahoo and other connections. I am certain that it is my service provider, Comcast, a terrible company. Some of the disconnects from the cluster are probably from the cluster also being connected to Comcast at a different location. I also have frequent interruption to my television cable, also from Comcast. I had some of this trouble before Comcast bought out Time-Warner, but I got a quantum increase in the months after the buyout. Don't blame XMLog, it is not the culprit.

Kevin, I have written every address that I can find and called every number that I can find. I have talked to upper management and written them by both snail mail and email. I have said every mean, derogatory thing I can think of. Their poor service seems to be a calculated effort to minimize service and maximize revenue. They would rather spend a lot on advertising to get new customers than fix their lousy system to keep current customers. The line at their complaint office ia always 20 or 30 people long. I would move my service, but they have the only hi-speed franchise in the area. I will protest their franchise renewal if I get a chance, but that is unlikely.

What can I say. Any thing that I have not done will get me arrested.

2899. Re: [XMLog] Packet Cluster Disconnects

Yahoo group: XMLog
Date: 2009-02-22 17:05:16 UTC
From: Michael McCarthy
Topic: 2890 Message: 2899

I have delt with this numerous times and each and every one can be blamed on the router. At W1BK, the ISP is Comcast. Lightning took out the modem/router and it got replaced. The first Dlink router wouldn't keep Telnet or SSH connections up for more than a few hours. It got replaced with an old Belkin. A new Belkin showed the same disconnect issues. This issue seems to be getting worse as the router vendors in Taiwan keep shoving cheeper and less reliable crap on us all the time. I used to be able to recommend a router that would work but from what I have seen, it is a hit or miss as to wether or not the firmware will work correctly.

The problem stems from the improper handling of NAT and PAT (address translation) state tables in the router.

*** Tabhair gach fear a drucht ***

Absolutely Kevin. I don't think it has anything to do with XMLog or your computer. I experience frequent disconnects from the cluster which I access through XMLog and Yahoo and other connections. I am certain that it is my service provider, Comcast, a terrible company. Some of the disconnects from the cluster are probably from the cluster also being connected to Comcast at a different location. I also have frequent interruption to my television cable, also from Comcast. I had some of this trouble before Comcast bought out Time-Warner, but I got a quantum increase in the months after the buyout. Don't blame XMLog, it is not the culprit.

Subject: Re: [XMLog] Packet Cluster Disconnects

I have delt with this numerous times and each and every one can be blamed on the router. At W1BK, the ISP is Comcast. Lightning took out the modem/router and it got replaced. The first Dlink router wouldn't keep Telnet or SSH connections up for more than a few hours. It got replaced with an old Belkin. A new Belkin showed the same disconnect issues. This issue seems to be getting worse as the router vendors in Taiwan keep shoving cheeper and less reliable crap on us all the time. I used to be able to recommend a router that would work but from what I have seen, it is a hit or miss as to wether or not the firmware will work correctly.

The problem stems from the improper handling of NAT and PAT (address translation) state tables in the router.

Not really. Sometimes a "keepalive" or ping every 60 seconds or so keeps the connections up, but I found that with this particular Dlink, the SSH "keepalives" didn't seem to work at keeping the connection up.

Comcast will not admit it, I am sure, but my theory is that they dump everyone routinely to keep the bandwidth down from the continuous connects. Bandwidth costs money and we usually pay a fixed amount for 24/7 connect, but we get usually 22/7 or there about. I can predict a dump around 11 AM and 4 PM then about 11 PM. Sometimes they last only a few minutes, sometimes for an hour or two. Lately, my TV signal goes out about 11 PM and sometimes does not come back until about 7 AM. Comcast, you got to love em because they don't care if you hate em.

Wayne, when you find this type of thing select View, Show Callsign List and add the station call and country to the list. Call assignments these days can give a programmer heartburn and new special events calls come out every few days.

Go into "View" and then "Call sign list" and type in the callsign. Then
select the country you want that call assigned to.

This K5D problem has been discussed on several other mailing lists. It is one of those crazy government regulations that if you try to understand you will end up on the 'funnie' farm. The FCC callsign assigned prefix for Desecho Island is KP5. All logging programs would see KP5 and know exactly where it is. The FCC cannot issue a KP5 call basically because there are no permanent residents there. There are no permanent residents because the Government has designated it a protected territory. In other words there are no addresses on the island.

This has come up before with other islands. The only option for the users is to edit the data base in their particular logging program.

The K5D issue is unfortunate, and a DXCC nightmare, but is not my problem because despite numerous attempts I have no K5D QSO to log - the European zoo pileups are simply too much for my QRP station and I admit defeat (with just a few hours of operation left).

But the inability of logging programs to work out the correct country from the callsign has hit home to me much in the past few weeks. I have been typing in all my old log books dating back to 1969. In many cases you have to manually change the country from what XMLog sets it from the current prefix list - all the old OK, Y2 and Russian prefixes have to changed to their older selves (*OK, *Y2 and an assortment of UA, UR, UH etc calls). The old 4K1 Russian Antarctic calls have to be researched to find their actual location, and even things like ZK1 North/South Cook need sorting into their new E5 calls. Some logging programs look at the QSO date to set the prefix but XMLog is not one of them.

But I am not complaining. 21,000 QSOs from 7 log books input and a couple more to go. And fascinating to see what I was working in the early 1980s when conditions were fantastic compared with the current doldrums. Spending a few minutes each batch correcting the countries is the least of my problems.

(by the way, why does XMLog insist on Antarctica being KC4 and not VP8 which everybody else uses for it?)

Hi Willis,

I have run some more checks here. T27A works, but T27OU does not. T27OU shows a U.S. mailing address so I am thinking that is the problem.

I am using Ver 6.13 and have tried QRZ lookups via both HTML and XML. Same results for both. It looks like the mailing address trumps the call sign here!? I sure thought I had worked DX with U.S. Mailing address in the past with no problems, but my memory is not as good as it used to be!

K5D was a pain here because I was lucky to get a number of band/mode fills and had to change each one. (7 Bands & 15 Band/modes)

You don't have to change each one. Just put the call in the Country list and the rest of the countries come out right. I have QRZ turned off and don't look up an address until I need it for a card. Then I have another window to look up the address on QRZ. I had QRZ running until the last QRZ change and never noticed that its address had anything to do with the Country block.

If you have QRZ lookup turned on, that over-rides a call in the Call Sign list.

I guess that is a good reason to keep QRZ turned off. Wonder why that is?

What do I need to do to have XMLog read the state abbreviation from the *adi file into the correct field when uploading from SD Logger. The data is in column 9 on the *.csv and *.prt files created in SDCheck.

Hi Burton, Can you copy and paste a typical record that isn't being imported correctly and show it here? Or, just send an email to Support@... and include the whole ADIF file as an email attachment (give me enough info to identify an entry that's not being handled correctly).

2918. Date formats - 60m band specs

Yahoo group: XMLog
Date: 2009-03-06 14:29:35 UTC
From: Dave Sergeant
Topic: 2918 Message: 2918

A couple of things.

Firstly many thanks for 6.13, I am now using this fine for importing and validating my LOTW confirmations. What are the plans on doing something similar for eQSL, I still keep a seperate log file for my eQSL confirmations - I already use my own program to generate an ADIF file from my eQSL inbox which I could modify to put a suitable field to mark the XMLog eQSL received box.

1. I have noticed that now and again when I start XMLog it has set the date format to the USA M/D/Y format (which is totally incomprehensible to those of use this side of the Atlantic...). There seems no reason, I suddenly find it has changed and I have to close the log and reset it, whereupon it stays until it does it again a week or so later.

2. More serious, the band limits for 60M are incorrectly set in XMLog and appear to use the USA channel definitions rather than the proper ones specified in the ADIF spec (5.2-5.5).

I first noticed that when importing an ADIF file with the Band field set to 60M that XMLog translated it to 5.332 - the bottom of your channels and not a UK channel allocation at all - I would be illegal operating there! Next I had a confirmation from LOTW which would not verify in XMLog - I had set the frequency for the QSO as 5.279, within one of our channels (and a CW QSO so it could be anywhere in the channel), which of course is below your 5.332.

Can you please check that XMLog uses the correct ADIF range and will accept any frequency between 5.2 and 5.5.

2919. Re: Date formats - 60m band specs

Yahoo group: XMLog
Date: 2009-03-08 19:43:40 UTC
From: Mike McAmis
Topic: 2918 Message: 2919

Hi Dave, I'll make the changes to increase the limits for the 60m band in the next version. For ADIF input, if the "Band" field is set but the frequency field is not supplied XMLog just picks the low end of the band (in the case of 60m the low end was defined as 5.332). No doubt I can't pick a default frequency that would be good for everyone. If the frequency field was being ignored because it was "out-of-band" changing the 60m limits should fix this problem.

I've checked the date format option code and I can't see where the value might get changed/lost. If you can figure out what action you're doing that causes it to revert to the default (U.S.) mode, let me know. No doubt something you only do once in a while.

I don't have any plans for eQSL changes. You can still use the eQSL fields to select log entries and create ADIF files. Perhaps I'll have to do something now that CQ is accepting eQSL's for their awards.

Thanks Mike. Perhaps you should set the limits for 60m to what is shown in the ADIF 2.2 spec (http://www.adif.org/adif222.htm) which is 5.102-5.404, but even that does not cover the whole UK band whose highest channel is 5.405 centre. As for the default for 60M from an ADIF file that is a tricky one - in my case all the QSOs I have entered into XMLog myself will have the exact frequency logged, so it is only if I subsequently get a LOTW or eQSL confirmation which sets it to 60M in its ADIF. I keep a seperate log just for the eQSL confirmations so that is the only place where I will see the 5.332 appear, guess I can live with it...

Further to the ADIF spec I notice that it gives the limits for 136kHz (2190M) as 136-137 whereas in the UK we have 135.7-137.8 so even the ADIF spec people haven't got it right! It will get even more complicated when more countries get a 500kHz allocation - and I will be trying to add my 500kHz QSOs into XMLog when I get round to it, no idea what will appear in the ADIFs produced from those!

Well it hasn't done it again yet, I will watch and try to see what triggers it.

OK, I guess I will have to carry on with a seperate log file for eQSL confirmations, I have over 4000 of them, too many to do manually!

From: wb6cyk
Topic: 2923 Message: 2923

When combining SD Logger ADIF files with my DX Log ADIF file I'm getting numerical data strings that are filling up the Notes Field. This creates a problem on the next upload because I get a "Field is full error" and I had to edit out the junk that is a long series of numbers like IN:/010/010/010/010. This did not happen on the ARRL DX contest this past weekend it only added ARRL-DX-SSB to the field. This is the first time I have used Ver. 6.13. My previous version was 5.29.

OK Dave, I'll define 60m as 5100-5500 and 2190m to 135-138, that ought to take care of it. (I also found/fixed some typos where I referred to 1290m).

I found a bug in the ADIF import that can cause a reset of the date format back to mm/dd/yy - I'll post a fix in 6.14 in the next couple of days.

Thanks Mike, that should sort 136kHz and 60m. OK about the ADIF import problem, that would explain it as I have in the past few weeks been doing a lot of that importing my old paper logs via DF3CB's FLE (Fast Log Entry). I had noticed that when it flagged errors in the imports it showed the dates in US format, but normally still had UK format afterwards.

I did some experiments yesterday on eQSL import and will report in a seperate thread.

http://www.davesergeant.com

2927. eQSL import

Yahoo group: XMLog
Date: 2009-03-10 09:17:53 UTC
From: Dave Sergeant
Topic: 2927 Message: 2927

I had a little play in trying to import eQSL generated ADIFs yesterday.

It is perhaps wrong to say that the eQSL Received field can only be set manually at the moment. XMLog recognises the EQSL_QSLRDATE: field in an ADIF field and sets that field correctly. But there are a couple of issues.

There are two ways of getting an ADIF file of your eQSL inbox. Firstly you can click on the link at the bottom of your Inbox while logged into eQSL ('Download entire inbox in ADIF format ...' somewhat hidden). This will produce an ADIF of your complete inbox from day one. It uses the QSLRDATE: field rather than the EQSL_QSLRDATE: which is not quite what we want, but it is easy to globally search and replace to change it.

eQSL do not provide facilities for downloading your new inbox confirmations to ADIF. But I have written a short program to do this - you basically copy all the text of the displayed inbox to your clipboard, paste it into a .txt document, then run my program on that and it magically works out where the QSO fields are and generates an ADIF of those QSOs. I have now modified my program to add the EQSL_QSLRDATE: field in the output (at the moment it also sets the QSLRDATE: field, see later). You can find my program at http://www.davesergeant.com/bbcbasic/bbcbasic.htm and look for the program eqsladif. At the moment this remains the old version which does not set the eQSLReceived field. While you are there note that I have another program for generating nice spreadsheets of DXCC totals from XMLog's output.

So what are the pitfalls in importing eQSL confirmations. Basically because there is no validation process on these like there is for LOTW and times on the eQSL ones may well differ from those in your existing log if you just import them they will not be seen as dupes but as new QSOs, or possibly overwrite existing ones with duff data. When I tried this (on a copy of my log) virtually all the imported QSOs were seen as new ones.... So for it to work the validation and importing process of LOTW needs to be extended to cover eQSL import (it would be trivial to add a line to my ADIF output to indicate it is eQSL data if it can be defined what it is to be). Or the QSO time and frequency/band information can be widened so that these don't appear as new QSOs. I guess the easiest would be to expand the LOTW method to cover eQSL as well.

The other aspect is that at the moment XMLog does not automatically include eQSL confirmations in its DXCC totals worked (but does in the individual countries worked screen) so it is not easy to list eQSL confirmation totals. This could also be addressed.

So at the moment I continue with my old method of eQSL confirmations - a completely seperate log (eqsl.log) which contains just the eQSL ones, with both the QSLReceived and eQSLRecieved fields now filled in. This does me but it would be nice in the future to have one totally integrated log.

Hi Wim, You weren't supposed to have discovered this new option yet... Anyhow it's mission is to make the smallest log window possible - so when you cycle to "show no info" no info frames will be displayed, including any you've marked as "always show" frames.

For version 6.15 I've changed things a bit so that the Name and Notes field are shown for this "minimal" log window.

Topic: 2931 Message: 2931

Mike,

Would it be possible to add a check box for "Include LoTW confirmations" in the Grids Worked/Confirmed and WAZ reports?

Also, it would be nice to run reports such as DXCC and WAS with LoTW confirmation and not include QSL. This would be handy for figuring out what can be applied for on LoTW without card checking.

The new Triple Play WAS award also is for LoTW only QSLs.

2932. Frequency to Band conversion

Yahoo group: XMLog
Date: 2009-03-24 17:33:21 UTC
From: umm88e
Topic: 2932 Message: 2932

Hello, I am new to XMlog and maybe did not set it up properly.
Running XMlog v6.13.

For every log record I enter the actual frequency in KiloHertz.
However, it does not get converted to band.
That creates a three fold problem:
1) eQSL does not like frequencies in KiloHertz. They want either Band or Freq in MegaHertz.
2) When editing the XMlog ADIF output file with XMlog, using LOTW TQSL, all entries are converted to 160m band --by default-- as no Band info is included in the ADIF file, so have to manually correct the band for each entry. Besides, when the LOTW results file is uploaded to XMlog all entries result invalid as the freq/band does not match either.
3) Selecting Awards > DXCC either Totals, Checklist or Worked/Confirmed I get all the Mixed, Phone and CW counts but nothing regarding by band.

Could somebody tell me what am I doing wrong ?
Any help would be greatly appreciated. Thanks in advance for your assistance.

From: Mike McAmis
Topic: 2932 Message: 2933

Hi Leo, When entering frequencies for new entries in the XMLog Log Window they should be entered in mHz, not kHz (and in this case ADIF file records will include the appropriate BAND info).

Mike, in trying to find an answer to Leo's question I looked at the help files. The Frequency description in the help file says that the frequency can be entered in mHz or kHz or other. Maybe the help file needs editing?

Mike and Willis, thank you very much for your prompt replies.
Just to explain the reason for me to use KHz: Have an ICOM 756 connected to a PC through the CAT interface. Eventhough I have not tried it yet, it is my plan to read the frequency directly from the rig. I believe it would come in KHz. I'll give it try later today and see what it comes back with.

Again, thanks for your assistance.

Willis,

What operating system are you using?

Is the computer OS clock in the lower right correct?

Some of older systems don't have patches for the change in the DST start and stop dates that happened a couple of years ago. Those systems should have corrected the clock last weekend though on the old change over date.

On Windows XP, if you right click on the clock time on the bottom right of the screen and select Adjust Date/Time, then select the Time Zone Tab you can select the time zone and there is a check box below the world map for "Automatically adjust clock for daylight savings time".

I still object the calling this "savings time" though. I spend way too much time changing clock every year.

Hi Craig,

> Would it be possible to add a check box
> for "Include LoTW confirmations" in the
> Grids Worked/Confirmed and WAZ reports?

I don't provide that option since for WAZ since LoTW confirmations aren't accepted for WAZ. (And yes, I'll have to add eQSL support for WAZ at some point).

> Also, it would be nice to run reports
> such as DXCC and WAS with LoTW confirmation
> and not include QSL. This would be handy for

You can do this indirectly - Do a log search with a search key for LoTW RCVD set to != or = to select all log entries with/without LoTW confirmations. Then run the reports using the "Selected Entries" option rather than "All Entries" option.

> The new Triple Play WAS award also is for LoTW only QSLs.

Didn't know about this... thanks for the heads up.

From: Craig Bradley
Topic: 2931 Message: 2943

Hi Mike,

Thanks for the reply.

Although CQ doesn't state that they accept LoTW confirmations, they did accept them on my application for the CQ DX Field Award. I printed the QSLs for each confirmation from the web site for the card checking. ARRL has stated that they will be added support for one of the "outside" awards as the next one that they do, so you might want to add that if you do the eQSL selection.

I tried your suggestion for reporting on the LoTW QSLs only and got interesting results. My XMLog file does not have all of the DXCC accepted fields set to match LoTW, so I got more QSOs listed than I did when I ran it on the whole log. Is there some way that XMLog could download the Accepted fields (and set Submitted) on records from LoTW? My other option is to manually go through each band and set them.

After thinking about how to do a combined LoTW and paper DXCC submission, it would be nice to have the LoTW confirmations marked or flagged on the DXCC Submission Tracking report, and then you could pick the LoTW confirmations first and reduce the number of cards to be checked.

My goal is to do a submittal for all of my band counties and I thing that I have about 140 cards to check (the difference from my total band/countries confirmed and the LoTW Bands/Countries on the DXCC totals report, so I want to minimize the count. The other way to do this would be to do a LoTW only submittal and then update all of the Accepted fields, and then do another paper submittal, but that would require two submittals and fees.

I hope that this makes sense.

2947. Re: [XMLog] search string

Yahoo group: XMLog
Date: 2009-04-29 23:57:40 UTC
From: N7mal
Topic: 2944 Message: 2947

Let me first fix something: I did not mean this""I use the => & =<"". I
should have used the and word, not the symbol.
No matter what combination I enter, comma or no comma, no spaces etc etc I
get the same error message "QSO date must be mm/dd/yy".
I think""01/01/98 and 01/01/03"" are in mm/dd/yy.
I have extracted the QSO's I needed but did it the hardest way possible.
I would still like to figure out what I'm doing wrong. I think there are 8
combinations for what I trying to do and I've tried all 8 several times and
all I end up with is the 'error' message.
Thanks and very best 73

p.s. As I'm proof reading/spell checking I got a thought that this cannot be
done possibly because of the century change.....

Mal, do not use the and word or the & symbol, just enter
=>01/01/98,=<01/01/03
I just tried it and it works fine. whether you enter the month first or the day depends on what you select for date format. It will be the same as the date in your log.

2949. Re: [XMLog] search string

Yahoo group: XMLog
Date: 2009-04-30 05:19:22 UTC
From: N7mal
Topic: 2944 Message: 2949

Let me try this again..... I did not/do not use the word and or the &
symbol. I tried to use them to make my point clearer in separating the
dates. There is no and or & except in that descriptive sentence.

Now ""=>01/01/98,=<01/01/03"" does not work on my computer. I've tried
""=>01/01/98,=<01/01/03"" and all the possible iterations and none of it
works. I even tried copy/paste your ""01/01/98,=<01/01/03"" with no luck. My
operating system is XP(home).
As I said I was able to get the info, the hard way, and am open for any/all
other suggestions.
Thanks Willis and best 73

p.s. I apologize for confusing the issue with the and &.

Mal, do not use the and word or the & symbol, just enter
=>01/01/98,=<01/01/03
I just tried it and it works fine. whether you enter the month first or the
day depends on what you select for date format. It will be the same as the
date in your log.

I believe there must be no spaces and no quotation marks; by any chance are you surrounding the search string with quotation marks?

Assuming you are trying to find all QSOs in a 5-calendar-year period, I find the following four possibilities all work identically (using dd/mm/yy order):

>31/12/97,<01/01/03
>=01/01/98,<01/01/03
>31/12/97,<=31/12/02
>=01/01/98,<=31/12/02

The variants with => and/or =< also work here.

From: WILLIS COOKE
Topic: 2944 Message: 2951

Well Mal, the mystery gets deeper. I am using XP(Professional) on my computer, so I doubt that the Op System is the problem. You are entering the query in the date block, are you not? I apologize for asking these "slam dunk" questions, but these cases are often caused by a brain lock. I have been on the receiving end, but finding a solution was worth the irritation. Start with the screen that has the Select and Modify blocks. Choose Select. Move the cursor from the Call block to the Date block. Enter the search string in the Date block. Press enter or choose the Search block.

Again, I apologize for the tutorial. I know you have been using XMLog longer than I have. I went through a similar thing a few weeks ago when my date was messed up and it was my computer clock that was wrong because the auto daylight savings time did not get updated with the change in DST start date.

I hope that you find the problem.

2952. Re: [XMLog] search string

Yahoo group: XMLog
Date: 2009-05-01 05:04:15 UTC
From: N7mal
Topic: 2944 Message: 2952

There is an old saying:""The world is right and God is in his heaven"".
I am now back on line after several hours of frustration. Late last nite my computer took a giant 'krap'. I'm back with my back-up computer. I had to switch hard drives etc etc etc. On top of everything else my DirecTV DVR also arrived today. So I had to split my time between 2 'big' projects. The bottom line is this computer works just fine. The search string was a piece of cake now. Both computers are Dell and both P-4. This system runs 24/7 and has been perfect for 2 years. So if I get 2 years out of the backup I'll be satisfied.
Thanks for all the suggestions.

2955. CSV Output instead of Excel

Yahoo group: XMLog
Date: 2009-05-06 00:12:35 UTC
From: ba35junk
Topic: 2955 Message: 2955

Is it possible to add a comma delimited output (CSV) in addition to the Excel output?

I use OpenOffice and when trying to export the Excel report, XMlog wants to have Excel installed on the machine.

I've tried the standard text outputs, trying to import with tabbed or space delimited, however, they do not import into OpenOffice formatted correctly.

Thanks,
Brent

Maybe not exactly what you want, but I have written a small program which can take XMLog's DXCC reports, saved as text, and convert them to CSV. I use this for generating nice 'countries worked' check sheets which I use to keep track of my annual totals. You will find this at http://www.davesergeant.com/bbcbasic/bbcbasic.htm and download the file xmlog1.zip. Instructions included, with OpenOffice Excel import details.

What a great idea! I have the same issue - I use OpenOffice. In
fact, after the PC Magazine shootout where OpenOffice beat Micro$oft
Office, my whole company switched to OpenOffice rather than pay for
Micro$oft's bloated Office.

CSV, comma separated values, is a universal standard that could be
imported into *any* spreadsheet.

2960. Cannot access QRZ lookup from XMLog

Yahoo group: XMLog
Date: 2009-05-17 23:38:37 UTC
From: robt.harris
Topic: 2960 Message: 2960

I just installed XMLog v 6.13 (new installation, not an upgrade). I used the zip file as the source. I have gone through all the setup steps, selecting QRZ.COM - html as the lookup method. When I attempt a lookup, I get no response from the QRZ.COM server and a time-out error.

I have verified that Panda Security (my internet security suite) accepts XMLog for outbound messages. I even went so far as to delete Panda Security, reboot the computer, and try a lookup.

With Panda Security's firewall active, the network activity log shows that 68 packets were passed from the computer to the router and no outbound packets were blocked. There were no inbound packets accepted or blocked (thus I conclude none were received).

Panda did not give a message alerting me of any unauthorized attempts.

The router is a DLINK DIR-615. My ISP is Wildblue, the satellite internet service.

Any ideas why I cannot get the lookups to work and what I should do to fix the problem?

From: Bob Harris
Topic: 2960 Message: 2967

Spent an hour on the phone with one of their tech support persons around lunch time. After much discussion (and putting me on hold a couple of times while she contacted others at WildBlue) we made no progress on resolving the problem. The only thought she had was that the latency was the culprit. However, she agreed that the one minute from when I clicked on lookup to when the timeout message appeared was long enough that latency should not be the issue.

A question for Mike: in the handshaking (communication between XMLog and an ISP) is there a step where the latency might be causing the problem?

I tried to sign up for the WildBlue forums so I could ask the question there as well but for some reason I have not received the email with instructions on how to confirm the subscription and thus cannot create any posts. Maybe someone else will have better luck in creating an account and can get an answer.

XMLog has uses the Windows WinSock control to get the data from QRZ and uses a 30 second timeout value. It opens "www.qrz.com", port 80 and then sends "GET /detail/w1xxx"+CRLF

Don't know why this should be causing a problem with you ISP.

Update Number 2: I have made no progress. Neither tech support at
WildBlue or readers of their forums have been able to help.

However, the problem is not unique to WildBlue. I asked KC0JP who uses
HughesNet -- the other satellite internet provider -- to install XMLog
and try doing a lookup at QRZ.COM. He gets exactly the same timeout
error after thirty seconds. The problem must have something to do with
the latency inherent in the satellite service although thirty seconds
would seem to be plenty long enough. Ah, the benefits of living in rural
America. :-)

Good idea Phil, I never thought of that.

Mike, one other feature that I have thought about is; could you add an item to the drop down menu when you right click on a call to display the station's QRZ.com entry in a browser window in addition to the choice to lookup the call?

When QSLing, I find that it is good to read the operator's QRZ page to see if the there are any special instructions such as no IRCs, 2 green stamps, etc.

Thanks & 73,

2977. Auto call check

Yahoo group: XMLog
Date: 2009-06-14 19:25:55 UTC
From: jhg_2
Topic: 2977 Message: 2977

Mike,

Thanks for all the work you have put into the program. I use it as my central log and move my contacts into Xmlog via adif when I use something else (like digilog, my preference for psk)

I have had a few thoughts about the program though.

First: Is it possible to add as a selectable feature, auto call lookup to show previous contacts after the call has been entered. It is nice to have that information, especially when talking with Europe. But there are times when I would not want it. IE, in a contest environhment. I use N1MM for a serious contest but if I am just noodling along, I just want to be able to make the entry and go to the next one.

Second...or maybe 1a: Allow creation of sublogs within the main log. That way I can extract information for a contest and not need to create a seperate log. I know,,,I know...another field can be a headache.

Third, and maybe the hardest: Provide an interface to MMVari so we can stay in our favorite log.

These are nothing more or less than simple suggestions. I like the program and will stay with it anyway. Thanks again.

2982. LoTW accepted info

Yahoo group: XMLog
Date: 2009-06-15 06:08:26 UTC
From: Craig Bradley
Topic: 2982 Message: 2982

Mike,

Is there any way that the accepted fields could be filled in with LoTW downloads? I hadn't updated those fields for a while and I had done a couple of online LoTW only submissions. I took me a couple of hours to get the records straight so I can prepare for another submission.

Also for the DXCC Submission Tracking, it would be nice to get a report with the LoTW confirmations only with a check box for Include QSL Cards check box, that way you can do all of the LoTW submissions first and minimize the number of cards to find, sort and have checked.

73,

- Craig, AE6RR

The only way, I can find, to get QRZ info after you type in callsign into log call box, is to put cursor on the callsign and double click.. Is there a keyboard key which can be press to get to the QRZ info as well? Tnx de John N7MZ

OK, it works in the paid mode. For some reason the check box to use the XML version became unchecked in XMLog. When I checked it the lookup started working.

I did find my membership info, you have to go into the area were you subscribe and then log in, not intuitive.

This has happened to many logging programs. To fix the problem, as I understand it the lookup URL will have to be changed, e.g. from
http://www.qrz.com/(callsign) or
http://www.qrz.com/detail/(callsign) to
http://www.qrz.com/db/(callsign)
An explanation for why the change was made is at
<http://forums.qrz.com/showthread.php?t=215302>.

3005. XMLog and old countries

Yahoo group: XMLog
Date: 2009-08-26 08:02:00 UTC
From: Dave Sergeant
Topic: 3005 Message: 3005

Thanks for v6.18, QRZ lookup now working again...

I was reminded during the installation of an annoyance I have with the program. It comes up with a prompt telling me that some of the countries have changed and whether I would like it to update my QSOs to the new countries. The answer ALWAYS must be an emphatic NO.

Earlier in the year I input all my old paper logs into XMLog, I now have over 50k QSOs over 40 years of operating. One of the niggles was that I had to painfully go through after importing them (from the excellent FLE Fast Log Entry program) and change the countries for old contacts from what they are on the current lists to what they were at the time of the QSOs - all the old USSR prefixes, deleted DL, YU and loads of others. That was the hard part of the process. A simple click on YES on that prompt screen would have undone all that hard work.

I recommend that the prompt screen is removed, or at least just displayed as a reminder with no buttons. If people really do want to update their old contacts to reflect what they are in the current DXCC list by all means give them the option but make it via a menu option (with a strong warning of what doing it would mean).

It seems that Fred has been diddling the format again. The last time he had just changed the web address a bit but this time he's changed the HTML such that it's a lot tougher to use the brute force data extraction that XMLog has used in the past. The data following the callsign (csignm) seems to now be qualified by two class defs:

1) some strange hex info which isn't to be displayed
2) another class that has the address data to be displayed

Looking at data returned for several calls I don't see an obvious pattern where the hex lines are placed amid the address data.

Do you suppose this is an explicit attempt to make it tougher for external apps to extract the data?

I really don't want to have to make this "screen scraper" understand HTML class defs!

Mike,

At the risk of raising the wrath of others, I would rather see you spend your time adding new features than chasing a moving target like the HTML code. This could go on forever.

I personally think that QRZ.com is a great service to all hams and I support it through my membership fees. The XML interface still works great.

I will now put on my Teflon suit and stand back!

Thanks again for a great program!

At the risk of raising the wrath of others, I would rather see you spend your time adding new features than chasing a moving target like the HTML code. This could go on forever.

I personally think that QRZ.com is a great service to all hams and I support it through my membership fees. The XML interface still works great.

I will now put on my Teflon suit and stand back!

Thanks again for a great program!

73,

- Craig, AE6RR

Subject: [XMLog] Re: CallBook Lookups...

It seems that Fred has been diddling the format again. The last time he had just changed the web address a bit but this time he's changed the HTML such that it's a lot tougher to use the brute force data extraction that XMLog has used in the past. The data following the callsign (csignm) seems to now be qualified by two class defs:

1) some strange hex info which isn't to be displayed
2) another class that has the address data to be displayed

Looking at data returned for several calls I don't see an obvious pattern where the hex lines are placed amid the address data.

Do you suppose this is an explicit attempt to make it tougher for external apps to extract the data?

I really don't want to have to make this "screen scraper" understand HTML class defs!

From: K9UDX
Topic: 3016 Message: 3016

Some day (when you have nothing better to do) could you make a test version of xmlog with a longer timeout when doing lookups on QRZ? It times out with both Wildblue and HughesNet. It might have something to do with the latency of the satellite services.

Hi Mike,

With Firefox, the results comes back in 5 to 7 seconds. With Internet Explorer, the results sometimes takes over 24 seconds.

I wish I knew of a program that would capture what transpires between my computer and QRZ when using xmlog. That might give a clue why one cannot use the lookup feature of xmlog with the satellite ISPs. I used to have such a program for use with RS-232 communications.

Someday if Fairpoint gets their act together, we might get true high speed internet in this part of the state, but I'm not holding my breath.

3029. Debug LOTW "no matching entry" problem?

Yahoo group: XMLog
Date: 2009-09-29 22:36:09 UTC
From: Bert - W0RSB
Topic: 3029 Message: 3029

I got tired of my old logging software (ACLOG) and started working with XMLOG 6.19 this afternoon.

I exported the log from ACLOG, imported it into XMLOG and then downloaded and imported my LOTW data.

I only have 173 confirmations in LOTW, but after the import into XMLOG, I got a report of 32 records that have "No matching entry in log."

The LOTW data was created from ACLOG, so I would have expected the data to match.

Comparing ACLOG's ADI file and the LOTW ADI file by eye didn't tell me anything.

What is XMLOG looking at in the two files that's causing it to reject these 32 records?

3030. Re: [XMLog] Debug LOTW "no matching entry" problem?

Bert, the most common thing I found was that the Zones do not match. A common thing is that whatever your old log used to figure out the Zone was not correct. Another common problem is that the other party entered the ITU Zone instead of the CQ Zone, sometimes the call area instead of the Zone because he did not understand the question. There are other errors that can cause this. The way I did it was to correct each one individually. It will take a bit of time. It sure did for me because I have over 3700 LOTW QSLs.

Yahoo group: XMLog
Date: 2009-09-30 14:02:37 UTC
From: Bert - W0RSB
Topic: 3029 Message: 3031

The zones match. There was one entry with a zone mismatch and showed up as a different error, not as "no matching entry".

The LOTW entries don't contain much data and I went through a few line by line and they match what's in the ACLOG's exported data. In a couple of lines (date and sometimes zone) the number of characters in a field will be different when one or the other has leading or trailing zeroes, but I manually changed those entries in the LOTW data and tried re-importing, but still got the "no matching entry" error.

Here's one example, with the LOTW data first:

<APP_LoTW_OWNCALL:5>W0RSB
<STATION_CALLSIGN:5>W0RSB
<CALL:7>4A1DXXE
<BAND:3>17M
<MODE:2>CW
<QSO_DATE:8>20090103
<TIME_ON:6>202800
<QSL_RCVD:1>Y
<QSLRDATE:8>20090105
<DXCC:2>50
<CQZ:1>6
<ITUZ:2>10
<eor>

And now the ACLOG data:

<Call:7>4A1DXXE <Qso_Date:8:d>20090103 <Band:3>17M<Mode:2>CW
<Tx_Pwr:3>100 <Time_On:4>2028 <RST_Sent:3>599 <RST_Rcvd:3>599 <Time_Off:4>2029
<DXCC:2>50 <QSL_Sent:1>Y <QSL_Rcvd:1>Y

Hi Bert, Didn't the LoTW validation report give you any indication of which QSOs didn't match and why? You can re-run this report against the downloaded LoTW data using the "Import/Validate LoTW Data" menu item. Check the LoTW section of the help file for more info.

Hi Mike; the LOTW validation report for these entries simply says "No matching entry in log". Of the 173 LOTW confirmations, 32 are bounced this way.

I now notice that there are differences. The data that's there all matches, but the XMLOG entries are missing the "BAND" and "ITUZ" fields, and maybe some more. Also, some of the fields have different precision, like the "TIME_ON" field. Could that be what's throwing things off?

I did an export of the XMLOG log file and here's a record from it, the corresponding record from the LOTW download and the ADIF file exported from my old log program (ACLOG) that was used to populate the XMLOG log:

<QSO_DATE:8:D>20090103 <TIME_ON:4>2028 <TIME_OFF:4>2029 <CALL:7>4A1DXXE
<FREQ:9>18073.010 <RST_SENT:3>599 <RST_RCVD:3>599 <MODE:2>CW <TX_PWR:3>100

Hi Bert, Here's the logic used by the the "FindMatchingEntry" routine:

1) Callsign: Allow some variants like
PJ4/W1ECT = W1ECT/PJ4,
W1ECT = W1ECT/P = W1ECT/MM, etc.

2) Time: +/- 3 minutes from LoTW data

3) Band

Mike - W1ECT

OK. I think I've found the problem.

If an old log entry (imported from ACLOG) had a frequency field of the form nnnnn.nn KHz, it was NOT matched. If the old entry had either no frequency field or a frequency of the form nn.nnnn MHz, it WAS matched.

When ACLOG is reading the frequency from my rig, which I only let it do during contests, it makes entries of the nn.nnnn MHz form. Sometimes when I'm in a hurry, I'll not bother entering the frequency. However, most of the time I enter the frequency by hand as nnnnnn.nn KHz, and those entries that have LOTW confirmations are the ones that aren't matched.

Since there's only 32 non-matching entries, I can fix those by hand, and let XMLOG do its own thing in the future.

Sorry to have busted in with this on my first day using the program.

Mark,

Let us know how you make out. I am still running XP Pro on my shack computer as there are way to many ham radio programs like MMTTY, DigPan, Ham CAP, IonoProbe, DX Atlas, etc. that may have problems and did in the early day of Vista.

I may leapfrog over Vista though and go to Win7 if it gets good reviews.

Thanks for the heads-up Bert... I'll make the change for the next release. Until then folk should use the "View/Show Callsign List" menu option to delete the current entry and add it back with the correct country.

Mike - W1ECT

> The file "DXCALLS.INI" has E51NOU hard-coded as 191, North Cook, when he's actually at 234, South Cook.

3044. Show LOTW status in spot history, map, etc.?

Yahoo group: XMLog
Date: 2009-10-11 15:05:32 UTC
From: Bert - W0RSB
Topic: 3044 Message: 3044

Consider adding some sort of indication if a station is an LOTW user?
[If it's already in there somewhere, please let me know how to find it]

I use "dxpots.com" for my telnet cluster and in the packet window, the derived prefix of calls from folks on LOTW are prefixed with a "+".

Optionally, you could include HB9BZA's "lotw1.txt" file and use it directly, although this would require XMLOG users to periodically download the file themselves.

http://www.hb9bza.net/lotw/

QSL costs being what they are today, I'm much more inclined to work an LOTW user than otherwise.

I cannot see how this can be easily done. OK, when you are logged into the LOTW site you can type any callsign in and it will show you when that station last uploaded data. But there is no way there, when it says 'no log data found' whether that is because he is not a member or whether he is but not got round to uploading yet. The interface between XMLog and the LOTW site would be quite hard, if not impossible, to do.

> QSL costs being what they are today, I'm much more inclined to work an

Really I find this depressing. Are you really saying you are going to check whether somebody is LOTW before even calling him? And in the case of most DXPeditions they only obtain LOTW approval after the event, so at the time of your contact they will not be recognised and certainly won't have uploaded logs from their desert island.

It is however encouraging that LOTW is now taking off in a big way. I have just run through a batch of paper QSLs and found at least 50% of them had already been confirmed by LOTW.

I agree with the need for LOTW indication. Most of the DXers I know target DX stations who use LOTW. I have seen them pass on those who dont. I frequently use another program (VE7CC) to show this information and it is a pain to have the extra screen open.

Please let dxpeditions know you donate to those who provide LOTW uploads.

It is on the packet window with a plus mark when a user. It is also on LOTW but you have to query call by call. For some reason the two don't always yield the same result.

http://www.hb9bza.net/lotw/

This guy (or guys) collects logs from folks and analyzes them for LOTW confirmations and maintains a file of known LOTW users.

The file can be downloaded and used to mark spots as LOTW.

BandMaster (http://www.dxatlas.com/BandMaster/) among other apps does this.

I have been looking for a comment from you about LOTW and don't remember seeing one Mal. Although we don't always agree, I don't feel burdened by your opinion on LOTW as implied by your signature block, HI. While I like to get LOTW confirmation, I still would not pass a DX QSO because the station was not LOTW active. The Burro is slow, but often works and I will spring for the big bucks for a new one. I am 312 current and counting so I can smell Honor Roll in the distance. Glorioso and Mayotte are my recent mark offs with Mellish Reef not too long ago. I am currently listening to K4M on 30 meters working mostly west coast and Europe but too weak for me to get through the curtains. Try again for your LOTW comments, I for one am interested. This message is by email, but I use Yahoo online email, so it might work better than citilink.net.

3055. Show LOTW status

Yahoo group: XMLog
Date: 2009-10-13 22:49:13 UTC
From: n7mal
Topic: 3055 Message: 3055

I tried 4 times now I'm copy/paste via yahoo directly

Subject: Re: Show LOTW status

I've posted this info several times here on this mailing list. It saves so much time and provides exactly what you are looking for. It displays a + before the time
Here is an example, the plus before the time indicates VK6BN uses LOTW...

DX de W2QN: 7006.7 VK6BN Alan on Long Path + 2253Z
VK6BN (Australia, 241) - RTTY 160 30 20+ 17 15+ 12 6

Here's how you get the plus sign. You must download and use the VE7CC terminal software. After you are connected to your favorite AR cluster and have set your preferences, minimize the VE7CC software you no longer need to waste space with it open in a window.

Next create a file in the MLOG directory called network.nod. Copy the following into the network.nod file you just created. If you don't know how send me your email address and I'll email you a network.nod file. Save it to your mlog directory.

rem
rem Internet AR-PacketCluster at network network
rem
connect 127.0.0.1:7300
match login:

Lastly to connect mlog to the ve7cc terminal bring up the mlog terminal and press F5 and click on network.

I have done this for years, as have others, and it works flawlessly.
Good Luck 73

Mike

I cannot install Beta 6.20 or 6.21. When I click on Setup, the install stops at the first window that says "Copying files, please stand-by" and crashes the computer. Never had any problems before. Running XP SP3.

Any ideas?

Topic: 3056 Message: 3057

Sorry Dom, I don't know what the problem might be. I haven't changed the installer or any of the system library routines since 6.19. If you can't get things running you can do a back-door install on top of whatever you've installed previously by just replacing the XMLog executable (mlog.exe) from the zip file. Not much else has been changed since then (help file and "Show Callsign List" entries).

I think it is a mistake to pass on DX contacts depending on LOTW status. I work the DX whether they are LOTW or not. I currently have 20,170 QSOs listed on LOTW and 3,860 confirmations. This is about a 19% response ratio and it is higher for US stations than for DX stations. I probably get as many DX QSLs unsolicited through the ARRL incoming bureau as I do through LOTW. Also LOTW is good only for ARRL awards. If you are interested in County Hunting, Worked All Zones and other non ARRL awards you will need confirmation through paper QSLs or lately EQSL for CQ awards.

I work DX for the joy of working DX. I am at a point when it is rare to work a new country and I play the DX station game as best I can. I like the LOTW confirmation if I can get it, but I also contribute to well run dxpeditions. It is work $5 to $20 depending on the nature of the dxpedition to me to have them there and get the confirmation. Most of the participants lay out thousands, sometimes tens of thousands to get there and give us the contacts.

For starting DXers, I recommend working lots of DX stations and hope for the confirmations. Send lots of cards through the outgoing ARRL bureau and hope for lots of cards in return. Expect it to take at least a year for round trip and you will see some that take two years or more. I just got an envelope from the incoming bureau with mostly 2007 cards with a few from 2008 and very few from 2009. There are some from 2006.

Look for the --|-- mark before the Phone CW RTTY indicator on the Packet screen for an indicator of LOTW. I am not sure how this is derived, but I have not found it to be 100% reliable, but it is useful.

I agree with the need for LOTW indication. Most of the DXers I know target DX stations who use LOTW. I have seen them pass on those who dont. I frequently use another program (VE7CC) to show this information and it is a pain to have the extra screen open.

Please let dxpeditions know you donate to those who provide LOTW uploads.

I've posted this info several times here on this mailing list. It saves so much time and provides exactly what you are looking for. It displays a + before the time
Here is an example, the plus before the time indicates VK6BN uses LOTW...

DX de W2QN: 7006.7 VK6BN Alan on Long Path + 2253Z
VK6BN (Australia, 241) - RTTY 160 30 20+ 17 15+ 12 6

Here's how you get the plus sign. You must download and use the VE7CC terminal software. After you are connected to your favorite AR cluster and have set your preferences, minimize the VE7CC software you no longer need to waste space with it open in a window.

Next create a file in the MLOG directory called network.nod. Copy the following into the network.nod file you just created. If you don't know how send me your email address and I'll email you a network.nod file. Save it to your mlog directory.

rem
rem Internet AR-PacketCluster at network network
rem
connect 127.0.0.1:7300
match login:

Lastly to connect mlog to the ve7cc terminal bring up the mlog terminal and press F5 and click on network.

I have done this for years, as have others, and it works flawlessly.

Found the culprit. Norton AntiVirus 2010 just doesn't like XMLog. Had to do a complete uninstall of Norton and then 6.21 installed just fine. Never had the problem with previous versions of Norton.

Hi Ray, Sounds pretty mysterious. XMLog uses low-level system calls to directly access the COM port, perhaps your virus/malware software is blocking things? You can try temporarily disabling whatever protection software you use and see if that makes a difference

XMLog also supports the OmniRig rig control system, perhaps this alternative would provide a solution.

3070. Adventures with Windows 7 and XMLog

Yahoo group: XMLog
Date: 2009-11-05 18:24:34 UTC
From: WILLIS COOKE
Topic: 3070 Message: 3070

My computer running XP Professional, a Pentium 4 and equiped with what was a lot of RAM (384 meg) in 2002 when I bought it has gradually become very slow and ground to a halt. I sought help on the internet from fellow hams and was advised to buy more RAM for the Pentium 4 Machine, but I pretty much wanted to buy a killer machine. So like any good ham would have done, I ordered a HP Pavilion p6230f Desktop with an AMD Phenom X4 processor, 8 Gig of RAM and 684 Gig of Hard Drive. Just in case that is not enough or it will not run some of my favorite programs yet, I ordered 2 Gig of RAM for the XP machine.

The Pavilion is now here and I am trying to get it going with XMLog so I can get back to working DX. I am having a few problems that you should all know about and maybe I will get lucky and someone will have some words of wisdom/

XMLog loads and seems to work. It is really nice to check for Award status and have the program check 22,000 entries for DXCC in about three seconds. I searched the internet for the latest WinKeyer USB driver and the latest Prolific Virtual Com Port driver for my Elecraft K3 connection. The WinKeyer connection appears to work, but the K3 connection does not. It works with the Elecraft firmware upload program, but not XMLog just yet. Both worked with the XP, but sometimes slowly and eradically, presumably due to low RAM.

Now for the wierd part.. When using the CW Keyboard window, if I hit the Esc key to stop a message or accidently the entire XMLog program stops responding and after a while, Windows gives a warning and closes it. The Window says that Windows is looking for a solution, but if it finds it, it keeps it secret.

When I try to close XMLog, either by clicking on the Red X or by choosing the Exit command, the program stops responding and Windows closes it as above. If I try to close it with the Task Manager (CTL-ALT-DEL) eventually Windows takes over and closes it in the same manner.

When I launch XMLog Packet responds with a Network error, Address unknown or no current internet connection. I can close the warning pop-up and open the internet cluster connection normally after that and it works fine except for an occassional uncommanded (by me!) disconnect. (but I had that before!). If I try to close the packet window with the red x then I get the not responding pop up.

So it works, well enough to use it, but really not very well. Any ideas?

I just can;t wait to do this all over with N1MM, Win1010 and the SKCC logger.

Hi Burton, I know the CWSkimmer package has an add-on that makes it simulate a PacaketCluster node and everything CWSkimmer identifies gets put out looking like a PacketCluster spot. You need to install "CWSkimmer Server" to get this feature to work. I did get it going at one time but I don't remember how difficult it was to set it up.

However, if you're just trying to connect to a normal Internet PacketCluster Node here's one list I found via a Google, don't know how up-to-date it is:

http://www.dxcluster.info/telnet.shtml

Check the XMLog help file sections on Internet Packet Connections and Packet Node Files for more info on logging on to PacketCluster Nodes.

Hi Doug, There's no way to select QSO's by number but perhaps selecting by date would do the job. For example you could search your log using a date of: >=1/1/09,<=1/31/09 to select all QSO's in January 2009 and then when you create the ADIF file choose the "Use Currently Selected Log Entries" rather than "All Log Entries".

For more info on search keys check the "Searching the log" info in the help file.

If this kind of strategy won't do the trick let me know and I'm sure we can work something out.

Mike - W1ECT

Hi Mike,
Thank you for help. I'll try that next week on my next upload to LoTW.
What I ended up doing was creating the adi text file on wordpad and then
deleting the part I didn't want to upload, saving it, and uploading it. I
have a couple more questions, but let me study and experiment a little while
longer before asking them.

Just sort by dates Doug, ie Select in the date window (>1/1/08,<6/18/09) or just >1/1/08 if you go to the present date. Then when you make the ADIF put the marker in Currently selected entries. If you have a few duplicates mixed in LOTW will sort it out. Just don't send the whole log every time so their software uses a lot of bandwidth sorting out hundreds or thousands of QSOs. Make sense?

I need to export only part of an existing XM log to LoTW, for instance, QSOs 697-824. The previous QSOs were already exported. I do not seem to be able to create an adif file with just the selected QSOs.
Thanks,
Doug K4LY

Assuming that you set the "LoTW Sent" date field when you previously exported your log, then search for all "LoTW Sent" fields that are blank by just specifying "=" in that field. Then export "Currently Selected" with "Set LoTW Sent" and your all set.

I guess the 'logical' question to ask is QSO# 824 the last QSO in your log?
If so then it is a very simple/easy procedure.
You simply scroll back to QSO# 697 and make note of the date. Next click on select and in the date box enter the following:
=>mm/dd/yy and hit the enter key..... (mm/dd/yy is the date of QSO# 697)
In the lower left hand corner you will see: Entry 1 of 127
Next export this as an ADIF file with the name of your choice. Then use the ARRL-LOTW software to convert the ADIF file to a TQ8 file and upload it to LOTW.

I do this exercise at least 2 or 3 times every month because I'm an active contester/DXer. After every contest I import the contest log into Mlog and the export the not only the contest log but also any DX I've worked in between contests. I can probably to this with my eyes closed and 1 hand tied behind my back...hihihihihi

Thanks all,
I am having fun with XMlog and am part way up the learning slope! Thanks for the info on uploading a recent part of log to LoTW by selecting date. I did it by editing the adif file on worpad before uploading it, but using the date will cut out a couple of steps.

This morning I was able to use HF Rig Port Select successfully so I can now click on a DX cluster station and my TS-850 goes to that frequency and mode. Is there a way for the station/freq/mode infomation to also appear on the XMlog ?
I haven't figured that one out!

I am now attempting to download LoTW to my XMlog. My LoTW download ended up in wordpad as a "MLog" text file was nor incorporated in so I'll see if I can figure out what I did wrong.
Every one have a good weekend and hope to work you on SS.

Topic: 3080 Message: 3087

Hi Doug. Go to Edit and open the Edit Defaults for new entries. Fill in the defaults that are approptiate. Get the date and time from the computer. Get the mode and frequency from the transceiver. Fill in the power that you will use most often. Those are the ones that I use most of the time, but they are easy to change if you are doing something different like entering QSOs from an old paper log, or you change your power, or whatever.

Then select Use Defaults for new Entry. You can turn this on and off as well.

When you select Edit, Add New Entry the defaults wil appear. When you are ready to enter a QSO, first his clear and your entries will update. To update a block, like the time after you have a call entered, double click on the block and it will get you a new time. The frequency and mode does not change as you tune your transceiver, only when you select Clear or Add a QSO and get ready to start another.

The setup works fine on my Windows 7 computer. You need to be logged in as an administrator to load anything on Win 7 or Vista. You might try right click and run as administraator. I have to do that on N1MM the first time I ran it, but not on XMlog.

From: rohn45
Topic: 3090 Message: 3090

So many of you were helpful Thanks! Learning curves seem steeper when you are old! Anyway, uploading an ADIF file by selecting date > will work just fine!

I've been using LoTW for 3 weeks and using XMLog for about a week now. I've uploaded over 28,000 contest contacts (mostly from my previous W0AH call) to LoTW from my contest software. Non-contest contacts are on paper logs that I probably won't upload to LoTW any time soon, if at all. I would like to download those 28,000 Qs from LoTW to XMLog, but guess that is impossible? I am aware that "XMlog does NOT create new log entries based on LoTW records." I guess I need to import all those ADIF files to XMLog as I recently did to LoTW. Then I need to download the LoTW data (to establish my QSL confirmations) so that XMLog will track DXCC and WAS awards- and more important- so that Packet Cluster Alerts filter out band-countries already worked. Many hours of work. Can someone confirm this?

In the mean time, I would like to use the Packet Cluster Alerts to indicate band/countries not worked and wonder how best do that. The only AWARDS records I plan to keep track of are the LoTW ones (and maybe eQSL in the future). I have a few hundred QSOs already in XMLog and would like to do a global edit to add ? to QSL SENT for those contacts (and any others I download to XMLog) so that the Packet Cluster Alert will filter all countries I've already worked. Is that possible? I only want alerts for unworked band/countries, band/states, and band/zones until I get all those 28,000 contacts downloaded to XMLog and the QSL Data downloaded from LoTW.
Thanks and 73,
Doug K4LY PS I do send out QSLs when I receive an SASE, but any future awards for me will be based solely on LoTW (and possibly? eQSL)confirmations.

You do have a lot of QSOs Doug. I just uploaded to LOTW and now have 21,471 up there with 4200 QSLs. Before you decide to only use LOTW, let me warn you that the response is about 20% overall and most of those are USA stations. The big DXpeditions will usually put your contacts on LOTW if you send them a nice PayPal donation. Some of the rarer location stations are holding out to collect the green stamps or find the ARRL rules for proof of license too much trouble. Also some of them don't have such good Internet connections, so I recomment hybred LOTW and paper QSLs. My latest submission was 79 LOTW credits and 50 paper credits.

The way I handle my logs is to download an ADIF file from N1MM then upload it to XMlog. Then I make another ADIF file from LOTW which includes the contest and whatever other QSOs I have. Sometimes for contests where I just make a few Qs and don't go for a big score, I just use XMlog and skip N1MM. You can't easily have N1MM and XMlog running at the same time unless you turn off the serial port connections on one of the logs. You need to do that before you try to load the second log or you will crash something.

The best way to upload QSOs into any logging program is with an ADIF file. LOTW does not record everything you want in a log, so downloading data from LOTW should be restricted to recording the QSLs that are there. I would use the download from LOTW for log building only as a last resort and everything else was lost when my shack burned down and I didn't have any off site storage.

It doesn't matter whether you upload to LOTW before you import into XMlog, but XMlog will mark as sent your LOTW stations. You can also do it by making an ADIF file for the contacts and telling it to mark them whether you send the file to LOTW or not, but then it is up to you to figure out how to make the markings correct.

It is also up to you to keep from sending the same contacts to LOTW over and over. LOTW will keep a record of when you sent more data that you can use to help. LOTW will throw out duplicate contacts and noone will get upset if you make a few errors, but they ask that you don't use their computing power to make the rough cuts.

This is a lot of stuff, but feel free to query on the reflector or direct if I missed a question or you think of something else.

From: Doug Allen
Topic: 3090 Message: 3092

Hi Willis,
Thanks for reply. Well you have a lot of LoTW contacts uploaded, too!
I have also been using N1MM contest software recently, but used Writelog for most of the 28,000 contest contacts I uploaded to LoTW. I still have several thousand more contest Qs to upload. I was W0AH in Colorado from 1996 until 2007 when I retired to SC and acquired the K4LY call. My older W2CRS 1990's NA contest logs and WJ2O general logging logs are probably lost. I've used mostly paper general logging the past 50+ years and worked many of the DXpeditions even though I'm not really a DXer. I've always loved contesting, and have had many top 10 North America finishes, but have not chased awards, applied for any, or sent out QSLs (except I QSL to anyone who sends an SASE) since the 1950's and 1960's. I was a fairly enthusiastic QSLer for about 20 years until it became drugery around 1975.

I had no intention to seek awards now until I got on LoTW and found I was fairly close to 6BDXCC and 6BWAS based on those 28,000 uploaded contest contacts alone. That's when I decided to try XMLog and do enough DXing to complete those 6B awards on LoTW. Using the DX Cluster Alerts would be helpful, but I guess I need to upload all those contest ADIF files to XMLog first and then download the LoTW Data? I'm satisfied with my 25% LoTW "return" so I will continue to just put paper QSLs in boxes or give them away to kids. If eQSL is also paperless (I havent checked it out enough except to know I have many thousands of QSLs waiting there) I will maybe try for 5BWAZ and possibly their other awards. In any case, I'll eventually join eQSL and upload my contest logs because I feel a little guilty about not answering most of the bureau QSL cards all these years. I think my competitive contest days are numbered. At age 69, I find it hard to operate 24 hours straight or 35+ hours during a weekend like I once could.

My two questions remain. One, is there any way to download those 28,000 contacts from LoTW to XMLog? Willis, I realize your answer is no unless my shack burns down! Does everyone agree? IF so, I'll probably spend tomorrow downloading ADIF files to XMLog.

Two, is there any way to do a global change to all my XMLog contacts that will indicate that they are QSL'd so that the DX Cluster Alert will filter out all countries and states that I have contacted regardless of QSL received status? Or maybe I will have to wait until I get those 28,000 contacts downloaded to XMLog and the LoTW QSL Data downloaded in which case I can use the DX Cluster Alert to filter out confirmed countries and states?
73,
Doug K4LY

From: N7mal
Topic: 3090 Message: 3093

Well Doug there is a way to get all your QSO's from LOTW. I had to do it a couple of years ago when my station got wiped out from a lightening strike. Unfortunately the ARRL asked me not to tell anyone how I did it. I will respect that but it can be done. Can you imagine what would happen to the ARRL's server if everyone tried to download 25mb, or more, files.

You asked: "" In the mean time, I would like to use the Packet Cluster Alerts to indicate band/countries not worked and wonder how best do that. ""
My XMLOG packet terminal window puts a plus sign + next to a band that I have worked the country on and the plus sign + next to the mode. When a country has been confirmed, by LOTW, then the band is deleted. Below is an example: I've worked Spain on 80/40/20/15/10 on both phone and CW. I have Spain confirmed on 40/20/15/10 and phone and CW. The only band I've worked Spain on and don't have it confirmed via LOTW is 80.

DX de ON3AD: 7036.5 EB3GIE BPSK31 2258Z
EB3GIE (EA - Spain, 46) - RTTY 160 80+ 30 17 12 6

Lastly you said in your P.S.: "" PS I do send out QSLs when I receive an SASE, but any future awards for me will be based solely on LoTW (and possibly? eQSL)confirmations. ""
You need to update/modify your QRZ listing to indicate your only preference is LOTW. I did that and it almost eliminated EQSL's. I still get a big envelope from the buro and my XYL really enjoys looking at them. I go through them and immediately put them in a box.

So many of you were helpful Thanks! Learning curves seem steeper when you are old! Anyway, uploading an ADIF file by selecting date > will work just fine!

I've been using LoTW for 3 weeks and using XMLog for about a week now. I've uploaded over 28,000 contest contacts (mostly from my previous W0AH call) to LoTW from my contest software. Non-contest contacts are on paper logs that I probably won't upload to LoTW any time soon, if at all. I would like to download those 28,000 Qs from LoTW to XMLog, but guess that is impossible? I am aware that "XMlog does NOT create new log entries based on LoTW records." I guess I need to import all those ADIF files to XMLog as I recently did to LoTW. Then I need to download the LoTW data (to establish my QSL confirmations) so that XMLog will track DXCC and WAS awards- and more important- so that Packet Cluster Alerts filter out band-countries already worked. Many hours of work. Can someone confirm this?

In the mean time, I would like to use the Packet Cluster Alerts to indicate band/countries not worked and wonder how best do that. The only AWARDS records I plan to keep track of are the LoTW ones (and maybe eQSL in the future). I have a few hundred QSOs already in XMLog and would like to do a global edit to add ? to QSL SENT for those contacts (and any others I download to XMLog) so that the Packet Cluster Alert will filter all countries I've already worked. Is that possible? I only want alerts for unworked band/countries, band/states, and band/zones until I get all those 28,000 contacts downloaded to XMLog and the QSL Data downloaded from LoTW.
Thanks and 73,
Doug K4LY PS I do send out QSLs when I receive an SASE, but any future awards for me will be based solely on LoTW (and possibly? eQSL)confirmations.

Willis let me take a minute to post the actual LOTW facts as posted by the ARRL:
There have been 250 million QSOs uploaded to LOTW. Sadly/unfortunately only 24.6 million have matches on LOTW. That is a horrible/disgusting rate of only """"9.8%""""".....
There are, again sadly, only 30,023 LOTW users. You and I are fortunate, I guess: You have a 20% return and I have a 28% return.
You said: "" The big DXpeditions will usually put your contacts on LOTW if you send them a nice PayPal donation. "" That's true, the recent K4M is a good example. However, and this is a big HOWEVER, they are required by the ARRL DXXC Desk to eventually upload the entire log to LOTW.

The bottom line of all this is all MLOG users should be using LOTW. W1ECT has gone to great lengths to make MLOG LOTW user friendly, and it works, and it works well.

Subject: Re: [XMLog] Thanks de K4LY and more questions

You do have a lot of QSOs Doug.? I just uploaded to LOTW and now have 21,471 up there with 4200 QSLs.? Before you decide to only use LOTW, let me warn you that the response is about 20% overall and most of those are USA stations.? The? big DXpeditions will usually put your contacts on LOTW if you send them a nice PayPal donation.? Some of the? rarer location stations are? holding out to collect the green stamps or find the ARRL rules for proof of license too much trouble.? Also some of them don't have such good Internet connections, so I recomment hybred LOTW and paper QSLs.? My latest submission was 79? LOTW credits and 50 paper credits.

The way I handle my logs is to download an ADIF file from N1MM then upload it to XMlog.? Then I make another ADIF file from LOTW which includes the contest and whatever other QSOs I have.? Sometimes for contests? where I just make a few Qs and don't go for a big score, I just use? XMlog and skip N1MM.? You can't easily have N1MM and XMlog running at the same time? unless you turn off the serial port connections on one of the logs.? You need to do

that before you try to load the second log or you will crash something.

The best way to upload QSOs into any logging program is with an ADIF file.? ? LOTW does not record everything you want in a log, so downloading data from LOTW should be restricted to recording the QSLs? that are there.? I would use the download from LOTW? for log building only? as a last resort and everything else was lost when my shack burned down and I didn't have any off site storage.

It doesn't matter whether you upload to LOTW before you import into XMlog, but XMlog will mark as sent your LOTW stations.? You can also do it by making an ADIF file for the contacts and telling it to mark them whether you send the file to LOTW or not, but then it is up to you to figure out how to make the markings? correct.

It is also up to you to keep from sending the same contacts to LOTW over and over.? LOTW will keep a record of when you sent more data that you can use to help.? LOTW will throw out duplicate contacts and noone will get upset if you make a few errors, but they ask that you don't use their computing power to make the rough cuts.?

This is a lot of stuff, but feel free to query on the reflector or direct if I missed a question or you think of something else.

From: Dave AA6YQ
Topic: 3090 Message: 3097

Using the ARRL's ADIFout facility, Rick K1MU set up a query mechanism that
makes it very easy to download either your uploaded QSOs or your
LotW-generated QSLs in ADIF:

<http://www.rickmurphy.net/lotwquery.htm>

This has been mentioned many times over the years on the ARRL-LOTW Yahoo
group:

http://groups.yahoo.com/group/ARRL-LOTW/

It is true that the ARRL would prefer that users not rely on LotW as a log
backup mechanism, as they fear that the additional restoration load imposed
on their servers might impact performance for "normal" LotW users. The
strongest argument in their favor is that LotW retains very little of each
QSO: callsign, band, mode, start date/time, LotW confirmation status, and
station callsign. While this is certainly better than nothing, reliable
on-site and off-site backup mechanisms that will protect your entire log
against catastrophe are not very expensive.

Obviously, I agree that LOTW is something we should be using. I think part of our increased return is that we are contesters and the more active hams are more likely to use LOTW. Unfortunately the ARRL has a security system that makes it difficult to use LOTW. The security for LOTW is tighter than for my bank account or brokerage account. It is more difficult for foreign hams whose country will not supply licensing data to ARRL. I just had to renew my certificate and am not in a ARRL loving mood at the moment. My return rate has been climbing as I add recent QSOs. I have 8100 QSOs from the early 90s, was inactive from 93 to 06 playing with airplanes and 13,350 since Sept 06. The older QSOs don't have such a good rate as the later ones, no surprise. I have a few thousand QSOs before 1988 and I am slowly getting them on computer, but I am not ready to upload them just yet.

There are a large number of hams who don't give a hoot or holler about QSLs and Awards, but I don't work too many of them because I spend my time chasing DX, Contesting and with number clubs where the interest in QSLing and awards is high.

3101. PROBLEM WITH UPLOADING ADIF TO EQSL.CC

Yahoo group: XMLog
Date: 2009-12-02 15:56:07 UTC
From: mefazamy
Topic: 3101 Message: 3101

Since Dec 01, 09 I have been unable to upload log to eQSL. I've been uploading several years without any problem after converting .log to adif. (I uploaded sucessfully to LOTW.) I've been getting the following error Message:

Error in Uploaded Log File
YYYYMMDD=20091101 20:20 DATE/TIME outside profile - Login to different account
YYYYMMDD=20091101 21:13 DATE/TIME outside profile - Login to different account
YYYYMMDD=20091101 21:44 DATE/TIME outside profile - Login to different account
YYYYMMDD=20091101 21:55 DATE/TIME outside profile - Login to different account
YYYYMMDD=20091101 22:05 DATE/TIME outside profile - Login to different account
YYYYMMDD=20091101 22:21 DATE/TIME outside profile - Login to different account
YYYYMMDD=20091101 22:59 DATE/TIME outside profile - Login to different account
YYYYMMDD=20091102 16:12 DATE/TIME outside profile - Login to different account
Step #2 - Import Log into Database finished
0 log entries were added out of 8 uploaded

Logger identified as: XMLog
8 log entries contained bad data, and were not uploaded.
They are listed above in the table.
You can make corrections in your logging program and upload the log again.
Any records already uploaded will be ignored when you upload again,
and only the corrected new records will be added.
Step #2 - Import Log into Database

I'm probably overlooking something fundamental. How can I fix this?

Thanks & 73
Evan

Well it is telling you what is wrong, the QSO is outside the range of dates you specified in your eQSL profile, which you can easily see from your 'my accounts' page. When you originally set up an account on eQSL it seems to choose a reasonable 'end' date in the future - mine is currently 1-1-2011. I guess yours is a bit earlier and has been passed...

I can confirm that ADIF's produced by XMLog still upload correctly to eQLS, I uploaded around 700 yesterday.

These are msgs from EQSL I presume.

You may want to ask for help at EQSL since all of this looks like it is from their servers.

Dear OM,

Thanks for the suggestion. Dave, G3YMC, hit the nail on the head when he suggested I change my beginning and ending dates on eQSL's profile. My upload was rejected because many years ago I told eQSL
to disregard uploads after 11/30/09.

3106. Formatting old entries for XMLog

Yahoo group: XMLog
Date: 2009-12-02 19:38:37 UTC
From: n3tl@bellsouth.net
Topic: 3106 Message: 3106

Hey everyone,

I wish I would've found XMLog 18 months ago! About 90 percent of my operating since June 2008 has been on the satellites, and I created some user-defined fields in another program to provide places for entries that XMLog includes - specifically Sat name and Sat operating mode.

I have an ADIF file with almost 4,000 contacts that I'd like to export to Excel, edit to conform to XMLog's default fields, then import as my satellite log. Am I right that XMLog will export .csv files, but not import them? If so, I'm not sure how to get from ADIF to .csv, edit in Excel, then get back to ADIF for import into XMLog.

Any suggestions?

I tried creating an ADIF version of the log from the other program and importing it straight to XMLog, but it's too different to be useful. If I can edit in Excel, I can do everything I need to much more quickly than going through almost 4,000 contacts one-by-one to make the necessary changes.

Oh ... I'm presuming that, if I can do the edit, I should reorganize the entry fields from the old contacts into the order that XMLog accepts them.

Thanks in advance for any help.

Tim, try entering a few typical contacts into XMlog the way you would like to see them in the finished log. Download these contacts into an ADIF. Open the file with Notepad to see how the fields are labled. Then make an ADIF dump of the log you want to move, open with Notepad and see what the fields are labled. Then make a back up copy of the dump you are moving so if you goof you can try again. Use the search and replace to modify the ADIF lables to put the data where you want it. I moved about 10,000 QSOs into XM log at the start and regularly massage ADIF files from my contest loggers in this manner. It only takes a few minutes to change thousands of contacts. I don't believe that you can import other formats. You can export CSV and Excel files but as far as I can see you can directly import them.

Hi Tim, XMLog imports/exports two satellite-related fields in ADIF files: "SAT-NAME" and "SAT-MODE". By Default any data imported from these ADIF fields isn't displayed - you need to choose the "Options/Log Fields..." menu item, choose the "Log Fields" tab, and then set the "Show Satellite Fields" option.

You're right - XMLog can export log entries directly to Excel or via a .csv file but there is no way to reverse the process. (Although I heard that someone once wrote a csv to ADIF converter).

It would probably be best to write some kind of converter to reformat the ADIF file containing the satellite data that isn't getting imported correctly (but I'm not sure why that would be required since as far as I know XMLog is pretty good at following the ADIF standard).

Ah, but Mike, XMlog must follow the standard to upload, but unless the other program also follows the standard you will not be successful.

I don't know if you heard, but I solved my comm problem with the K3 by installing an RS-232 card in my computer and using a DB-9 cable. The USB to RS-232 adapter seemed to be the problem. I still have a few issues with Win 7, but mostly XMlog works OK with the most used functions. Of all things, it will not shut down properly. I have to invoke Task Manager or crash it by changing the comm port parameters. I use the CW speed because it does change the parameter before it crashes the program and changing CW default speed by a WPM doesn't hurt anything.

Tim, the rules for ADIF are also on the internet. It might be worth your while to find and download the specification and get an understanding of what it is all about. The ADIF is a text file with a special format, so any text reader will read it. I like NotePad better than WordPad or any more sophisticated program for manipulating ADIF because it does not attempt to save it as a Rich Text file which will not work for import. You can save as a plain text in WordPad, but you need to remember what you are doing and NotePad will only save as plain text, so you don't have to worry. My first log that I translated was written in Quick Basic and logged before the ADIF standard was written, so I had to write a Basic program to translate it.

If you have some ability and willingness to program formulas in Excel, you can export ADIF files from log data that is stored in an Excel spreadsheet. Here are two web sites with information on how to do it:
<http://www.storm.ca/~ve3iay/spreadsh.html> and
<http://www.g6csy.net/ham/adif.html>.

From: Craig Bradley
Topic: 3115 Message: 3115

Mike,

I just purchased a Buffalo DriveStation to backup my computers, it came with backup software from Memeo called AutoBackup. This software backups up files every time they are written to disk. I see that the alerts.mdb file is being backed up every time a new packet spot is received (I have band map on). This then creates a backup action over the network. I can exclude directories from the backup but not files. Is it necessary to write this file to disk every time a new spot is received?

Topic: 3115 Message: 3116

Hi Craig, The alerts.mdb file is a Microsoft Access database that XMLog uses to maintain a history of cluster spots so that they can be maintained across XMLog sessions. If I tried to implement some scheme where this data was cached in memory and only flushed on some schedule not only would this use more memory but it would mean that spots could be lost if the system (or XMLog) crashed.

There must be some way to can make an individual file exempt from real-time backups, you might try e-mailing the company that makes the software.

Hi Mike,

Thanks for the response. I understand the problem. I just seams like a lot of writes to disk if the spots are busy (like during a contest).

I can disable a backup of a directory but if I do that I am not backing up my log file. I will contact them and see if there is some other way to do it.

Could this file go in a sub directory?

Hi Craig, There is an un-documented feature that lets you include all "data" files in a seperate directory but this includes logs, options files, etc. (i.e., any file that can be updated) - so this wouldn't do what you want since none of these files would then be saved by your backup software.

Actually the overhead for maintaining the PacketCluster spot history is very small (a lot less than maintaining the PacketCluster windows themselves).

Hi Mike,

I do need my log backed up so I think that I will live with this for now. Maybe I can schedule the backups to go less often, now any time that a file is written, it is immediately backed up.

My main concern is wear and tear on the disk drive. I leave XMLog up and running 24/7 with packet cluster/band map so I can just walk in the room and see who's on the bands.

73 & Happy Holidays!

3124. Windows 7 issues

Yahoo group: XMLog
Date: 2009-12-31 16:50:10 UTC
From: n0pfe@sbcglobal.net
Topic: 3124 Message: 3124

I just bought a new Windows 7 machine the other day and have noticed some issues especially when running MXLog with the packet window started.

Looks like XMlog starts up just fine and, I can get many of the features to work. But one issue I ran across is with the packet window not closing down when I exit the program. When I exit XMLog and the packet window is open, I have to use the task manager to kill it. The little message at the bottom of the packet window says "shutting down" but it never does. Aside from the obvious, this has the added annoyance that any changes made don't get saved if you terminate.

I did try this briefly on another Vista machine and I get the same behavior. I did it on anothet Win 7 box also with same results.

I do have the 'User Account Control' Windows feature disabled as that was causing issues with other programs that communicate with each other.

There is a feature that allows one to operate in other OS compatibility modes. The one that comes closest to working and allows me to shutdown the program normally is in Win98/ME mode. However, this is broken as you can't use the menu commands that allow you to save off your log or open another because the file/dir dialog never comes up.

Anyone else see this of have any ideas?

Thanks!
73, Bruce

Topic: 3124 Message: 3125

Bruce, I am running XMlog on an HP Pavilion running Windows 7 64bit in the normal mode with an Elecraft k3.
I had to install a PCIe card with an RS-232 port to get computer control of the K3. I could not get the USB converter cable to accpt data from the K3. To shut down, I open CW Options and Port Select and change the default keying speed then Save. This causes a fault in the program and then it shuts down. If I try to shut down with File-Exit or with the Red X none of the windows close, not just the Packet Window. I can get it to close with the Task Manager, but it is easier to crash it and I have not lost any data. I also find that if I leave my WinKeyer connected through XMlog and the computer enters the sleep mode it will crash Windows and the computer will auto reboot.

My thoughts are that Microsoft really does not care if Windows works with any programs except Microsoft Office and the popular games.

3127. multiple different qsl printed on same label

Yahoo group: XMLog
Date: 2010-01-03 12:06:28 UTC
From: pe1oyb
Topic: 3127 Message: 3127

Hi,
I want to print my qsl labels, but the problem is that alle labels are printed on the same label!.
I only want a label for each contact. If i worked the call before, tis contacts must be on the same label.
I created a custum layout, with max 4 qso on a label. When printing my qso's they are printed on one label and not using the 24 labels available. So I get too many pages for 24 labels.
I can't find a option telling to make a new label for a new\different callsign.
What to do?

From: Puck
Topic: 3133 Message: 3133

If at all possible it would be nice if the "Display All Entries for Call" function included the "notes". Even better would be a user selection feature of just what fields were displayed. I do a lot of rag chewing on CW and I like to look back at previous QSO's and see what notes I made. If they were all on screen at the same time it would be much more convienient. Perhaps this is too much to ask but I thought I'd at least ask.

I have used XMlog for a number of years and have about 75K qso's in my log. XMlog works great for me and I appreciate the efforts Mike makes to keep it current and provide it as freeware. It's about time I made another donation to help continue it's development and maintenance.

Topic: 3134 Message: 3134

I belong to a net that uses netlogger to help manage contacts (http://netlogger.org/). This works great for what they do, but doesn't provide very useful tools for tracking awards. I came across XMLog when searching for logging programs and find it very useful. I imported my log file to XMLog and generated a very useful checklist for WAS. I get some odd behavior however. The state imported by XMLog doesn't always agree with the netlog data base. In one case I get AK instead of NE. While I'd be thrilled to have AK among my contacts, this is not correct. The station once lived in AK, but I verified that the netlogger entry had NE set for state. I can't use a tool that reports state incorrectly. My guess is that XMLog is looking up the state somewhere rather than using what is in the import file. Any idea what might be going on here?

After importing the contacts, I can't see which band was worked. This is very important for WAS awards. Can you please add band to the display and make it sortable?

For some odd reason, the QSL sent field shows "?" instead of "Y". Is this a bug?

I'd be happy to chip in with a small donation if this ends up being my tool of choice.

Regards
Rich KE1EV

Richard, the QSL field wants a date rather than a Y or N. The AK part comes from Alaska being a country as well as a state. I have not run across that problem, but it may come from the country field not being filled in. The way to tell what is happening to you is to look at the ADI file you are going to import and see what is there. It is a text file, so you can read it. If you are not familiar with the ADIF you might look at the specs (Google ADIF) and get familiar with the format. I import a lot of ADIF files from my contest programs, but I have to work them over with a text editor. I use Note Pad rather than Word Pad or another more capable editor because you don't want Rich Text. Note Pad doesn't do Rich Text, so you can just save without worry. With Word Pad, the default is Rich Text, so you have to remember to save as Plain Text.

The problems come from the fact that there is some flexibility in ADIF to accommodate the variety of programs. You will be lucky not to need an adjustment whatever programs you are using, but by using a bit of thought and search and replace the adjustment is not terribly time consuming.

Hi Rich, ADIF files are just text files, open your ADIF file with something like Wordpad, search for the record with the callsign that seemed to get the state wrong and check out the data in the record(s). If the state is OK in the ADIF file but wrong in the corresponding XMLog record, let me know.

Also, check an ADIF entry that got the date set as "?". One way this can happen is if the ADIF file says a QSL was received (or sent) but doesn't provide a specific date (there are two seperate ADIF fields, one for the QSL status and another for the date).

Also, don't know why you'd want to skip the "Power" field unless it was badly formatted in the ADIF file?

I downloaded ADIF Master and examined my log file. The entry noted earlier is listed in that log as a South Dakota station, "SD". When imported to XMLog, he shows up as Alaska, "AK". I'd be happy to send my log file as an example.
Even if I could sort out the errors in XMLog, I have no way to fix an entry there. XMLog doesn't use adif format, so I can't compare the databases. I exported the XMLog database to an excel spreadsheet and verified that the station state was changed from SD to AK.

Hi Puck, I'll look into this - It's most likely that I could add "Display All Entries for Call" as an option to the "Display/Display Excel" feature since it already provides for field selection, etc.

One thing you can do for now is double-click on any entry in the "Display All Entries for Call" Window and this will move the main Log Window to the corresponding log entry where you can see the Notes info. Many windows allow double-clicking in this manner, for example: all the Display/xxx windows, the Callbook Lookup Window, and the QSOs+Check Call Window (F4).

You might try using "View/QSOs+Check Call Window (F4)" instead of "Display/Display All Entries for Call". It dynamically updates as you cruise your log file or when you single-click on callsigns in the Packet Window(s). As noted above you can then double-click on entries displayed in the Check Call Window to get more info.

Mike, a problem with this click (in addition to not knowing about the feature until now) is that it will not work while in the QSO entry mode. It would be dandy if it would open another window and let you keep the editing or searching window intact. It would also be dandy if there was an option for a window that shows the previous QSOs for the day or the session while keeping the QSO entry window open.

I also notice that the Confirmed symbol is not shown for LoTW confirmations. It would be nice to see maybe a third symbol for LoTW confirmed. Some might like to see eQSL also.

I know that there is always someone wanting something else. We are patient, so do it when it gets to the top of your list. I guess that I was not clear. I know the check call window updates as a new call is entered in the log window. What I was trying to say is that clicking on a previous QSO in the check call window does not work if the QSO entry window is active. This means that you cannot look at a previous QSO until you finish entering the data, click add then Quit the screen. Also there is no way to look at the previous QSO or QSOs made without quitting the entry screen.

Hi, I couldn't reproduce the problem here. Are you saying that the option in the dialog box doesn't get selected when you click on it?

Note that any mailing or QSL labels that you previously have queued before you change the layout will not be affected - whatever layout was in force when you did the "Add Label To List" is what gets used.

However, if you want to change the layout for queued labels there is a hack that you can use. The labels queue is kept in a simple text file named "labels.out" for qsl labels and "mailing.out" for mailing labels (the folder is the install folder, usually c:\mlog). If you look at this file with WordPad or some other text editor you'll see that you can globally change the "Layout=xxxx" lines to "Layout=".

That's correct. Clicking on the radio button does nothing. I reinstalled mlog in a different directory and it seems to be a corruption in the layouts.mdb/ldb files. Using the default files, the radio button works, copying my old layouts files causes the problem to reoccur.

Can you suggest a repair for the layouts file or am I best to retype all of my definitions?

Yahoo group: XMLog
Date: 2010-01-27 16:59:04 UTC
From: w1ect
Topic: 3134 Message: 3148

Hi Rich, Normally ADIF files provide a field (DXCC) that specifies the DXCC country for each entry. While this value isn't a required field, without it the program doing the import has to "guess" what the correct DXCC country is from other data. The DXCC value is set to zero for the entries you sent me and since XMLog makes it's "guess" primarily based on the callsign it picked Alaska for the KL7 calls. I'll take a look at my "guesser" and make some improvements so that it also looks to see if any state/province is supplied.

For now you can just search your log for entries where State=AK and fix the ones that had inappropriate guesses.

You can take a look at the rest of your ADIF file and see if all entries have DXCC=0. If it looks like just some of them do perhaps you should ask the NetLogger folk what's going on. And if all of them are zero?

I think you will find that TX3D counts for French Polynesia which is part of the Austral Chain, but not for Austral Island which is rare. Check their web site carefully.

3153. Windows 7 and XMlog ver 6.26 w/usb to serial convertor

Yahoo group: XMLog
Date: 2010-02-10 05:55:29 UTC
From: Raymond
Topic: 3153 Message: 3153

I was unable to run xmlog with my FT1000MP Mark V using the Win 7 OS and a usb to serial convertor. It worked at first but after several updates nothing would work as far as communicating with the rig. However tonight after a new update from Microsoft and a new Aten driver it started working again and now frequency/mode and rig comms are working just fine. So to those with similar issues you might check for new drivers and updates. All seems well.

Settings are:

Port Type-----XMLog
Com Port------Your choice
Baud Rate-----4800
Parity--------None
Data Bits-----8
Stop Bits-----2
Flow Control--None
Data Mode-----Data/FSK
Options-------RTS Always on (Yes)

From: Glen - WB4KTF
Topic: 3158 Message: 3158

Mike,
Still having problems installing xmlog625 on Windows 7 (64bit), and had the same problem on 32 bit. Everytime I try to install I get a "serious error" :
Invalid line in Setup file
Section Setup1Files
@ MSINET,ocx,$(WinSysPath),$(DLLSelfRegister),$(Shared),3/24/09 12:52:32 PM 136008,6.1.98.19

I actually decided to load the Windows 7 64 bit version after having loaded the 32 bit because of XMLOG, I really used it a lot on XP and need it to work again. Can you please provide some advise as to what is happening?

Glen, are you installing XM log in the C:\\ directory or in the Programs directory? Mine is installed in c:\\mlog and it runs fine. I have been running it for about 3 months and the only issue that I have is that the Exit routine does not work and I have to use Task Manager to close it. I am running Windows 7 64 bit on a HP P6230f with AMD Phenom II Quad Processor. When I bought the computer in November I had several issues, most of which have gone away with XMlog and Windows revisions.

I have tried installing XMLOG two ways but both are to C:// exactly as the installer wants to do. In the initial try the installer launches to the dialog box with the INSTALL button, as soon as it starts to run, it fails with the error message stated earlier, then Windows 7 says that it needs to remove the installation files, then after it removes the files, Windows 7 offers 2 choices to try to reinstall "normal" and to reinstall in "recommended" mode. The install fails again no matter which selection I make.

3162. Packet DX cluster alerts.

Yahoo group: XMLog
Date: 2010-02-17 16:47:13 UTC
From: Rick
Topic: 3162 Message: 3162

Hi list.

I am trying to setup XMLog to show DX cluster alerts for the general class part of the HF bands.

The help file isn't vary clear to me.

Under options, packet cluster alerts, in the bands edit field, do I type in extra to exclude alerts from the extra portion of the HF bands?

Also in the modes edit field do I type in CW and RTTY to get alerts for phone only?

One more question.

When searching my log, how do I get it to show me all the entries in my log?

Thanks in advance and 7 3.

3171. Callsign List

Yahoo group: XMLog
Date: 2010-02-23 01:01:40 UTC
From: Puck
Topic: 3171 Message: 3171

After the ARRL DX CW contest I imported the contest log into XM Log. LZ5R, who I worked on 3 bands, was assigned the country Antartica? I checked the callsign list and sure enough it was in there as Antartica.
I just deleted that entry. Any idea why that call was in the list? I sure didn't add it.

Another call you should add though is TO4D who is in Guadaloupe (FG).

73,
Puck W4PM

3172. Re: Callsign List

Yahoo group: XMLog

From: w1ect
Topic: 3171 Message: 3172

Hi Puck, I don't know when LZ5R got added to the callsign list as Antarctica - there was probably a dx-pedition sometime in the past but a web search didn't find anything. It's probably best to delete this callsign from the list so the country for the current station will be set properly. I'll delete the entry from the "official" list that gets distributed but this will only affect those who are doing an initial install of XMLog (since existing entries are never deleted). Everyone else will have to delete this entry themselves.

Thanks for the heads-up on TO4D as FG, I'll add that to the "official" list.

Hi Alan, Just copy all the files/folders from your old install location (usually c:\mlog) to the same location on your new system. Then download the latest version from www.xmlog.com or www.xmlog.com/beta and do an install to that location. The install will not reset any options settings from .ini files, etc. that were moved from your old system.

Just copy the file to the mlog directory on the new computer. You will need to make it the default log on the new computer or at least call it up. The entire log is in a file called WA2AC.log if you named it with your call sign.

Search for >10/11/09,<03/02/10. Note that this starts the day before the first day you want and ends the first day you want to exclude. Do not put a space after the comma, no matter what your typing teacher said.

Thanks, Willis;

That worked fine, but I need to print the QSOs from over a span of days. Say from 10/12/09 to 03/01/10.

Any ideas?

3183. RE: Problem of Extra Data added to Notes Field when combining files

Yahoo group: XMLog
Date: 2010-03-08 16:09:26 UTC
From: wb6cyk
Topic: 3183 Message: 3183

I use SD Logger for my contest logs and XMLog for my permanent log. When I combine SD *adi files with my old XM log *adi file I get a lot of trash data added the XMLog notes field. It only happens with CQ Contest logs. I only noticed this last year when my effort to combine ADI files would not work. The message I got was too much data in the Notes Field. Has anyone else had this problem? How do I fix it?

Note: If I could do a global search and replace on the XMLog data it would be and easy fix each time I wanted to combine logs.

Burton

The information in the notes field of course is added by SD, and it is
Paul EI5DI who you must address the issue, it is probably not an XMLog
issue....

I have never had any problems with this, I import my SD ADI logs all
the time. For instance a sample QSO for last years CQWW contains in the
Notes field:
CQ-WW-CW
and for one of the RSGB CC contests:
IN: 31 OUT: 017
I have never had XMLog complain about too much data in the field, which
many of us might well want to keep in our logs anyway.

By the way, what do you mean by 'combine'? The way to do it is to use
'Import/Import ADIF File'.

Burton, look at the ADI file before you combine with Note Pad. Find the offending data that you want to delete. Use Edit, Find and Replace. Type the offending data in the Find block and what ever you want to replace it with (nothing?) in the replace block then select replace all. You can also use it to change the data to some other block. You may need to make a small ADI file from XMlog to determine the block description used by XM log. It is easier than it sounds when you get into it and it only takes minutes to change a big log. Use a copy of the log and if it does not look like you want it to, copy it again into XMlog with an overwrite direction and keep trying until it suits you.

Willis, I discovered my problem. I didn't realize that I could amend the basic log I have been building by just importing the new *.adi file from the contest log to it. Some how I got it into my mind that I had to create a new log form and import both *.adi files into it. The junk was coming from exporting the original log into the ADI format and then importing it into the new log.

Thanks for getting back to me so soon.

I use N1MM for a contest log and can import these logs without modification. I also import a lot of SKCC Sprint Logger Logs and have to work them over with Search and Replace to import the SKCC numbers. Since SKCC numbers can have as few as 1 and as many as 5 digits it takes a few cycles to do it.

I also had problems with moving logs from N1MM to Xmlog.
I use ADIFMaster, free at www.dxshell.com , to edit the ADIF file
before I import it to XMLog. ADIFMaster shows the ADIF file in a
spreadsheet format. For example, the FREQ_RX field always appears in
the XMlog remarks field, so I use ADIFMaster to delete that column in
the ADIF file before the import to XMlog.

I have found the opposite Burton. I have found that most of the errors are from LOTW having the wrong zone. Most common is LOTW showing the ITU Zone rather than the CQ Zone. Many LOTW participants are not keenly aware of the CQ Zone. Contest people and WAZ people know, but many others do not know that the CQ Zone is usually the important one. Another common source is stations worked away from their home QTH who do not bother to change their LOTW submittal QTH.

XM seems to calculate zone from the State or Country. For the Countries that have multiple zones other than the US it puts in a question mark. I have not detected any incidence in over 5000 LOTW confirmations where XMlog made a miscalculation of zone without me making an error in entry. The countries that I am aware of being in multiple zones are Canada, Russia and Australia.

I would hope that neither LOTW nor XMLog use the informtion which may
or may not be in the zone fields as a check for the validity of a QSO.
My contest logs when imported into XMLog will have them filled in,
otherwise they are always blank. In any case I always download the
'short' version of my LOTW report file and as far as I am aware that
doesn't include the zone information anyway. The ONLY information
needed to confirm a QSO is valid is call, date, time and band, I would
hope that is all that XMLog looks at when you validate a LOTW ADIF
file.

From: WILLIS COOKE
Topic: 3189 Message: 3193

When you validate a LOTW file the program looks for things that are different in the downloaded data from LOTW and what is present in your XMlog. It does not take any action except when you upload the QSL confirmation to XMlog it stops the upload and gives you the opportunity (requires you) to make a selection between the data you have and the data in the confirmation. The QTH data, State, County, Zone in LOTW comes from the data submitted by the other station. This is extracted from the data that the other station has in his Location file used when uploading his contacts. If it is submitted incorrectly, it will stay incorrect. ARRL does not care about County or CQ Zone for its awards and it does not check any of the data for accuracy, just as it does not check your QSL card for accurate data. The only time that LOTW declares a contact valid or invalid for an award is if you use LOTW to submit for an ARRL award.

XMlog will calculate (lookup?) the zone when it has the data, but if a zone number is entered during the contact, in an ADIF upload or after the contact that zone will not be overridden by the algorithm. The only room for improvement that I see is that it could use a VK6 call sign to calculate Zone 29 and the rest Zone 30. In Canada Zone 2 requires some help and Russia required more data than reasonable to have in the program.

In every case LOTW downloads allow you to select the data you find most likely correct for your Log. It can be a PIA, particularly the first time you download and have lots of QSOs to check. You can use the precheck to either correct your log or decide what to do in advance of the Upload to XMlog, which I find convenient because once you start the upload you need to finish before you log any more contacts.

The judgement of whether a contact is valid or invalid for an award depends on the award sponsors check by whatever method they use. The accuracy of your log is entirely up to you, as it usually is.

I would hope that neither LOTW nor XMLog use the informtion which may or may not be in the zone fields as a check for the validity of a QSO. My contest logs when imported into XMLog will have them filled in, otherwise they are always blank. In any case I always download the 'short' version of my LOTW report file and as far as I am aware that doesn't include the zone information anyway. The ONLY information needed to confirm a QSO is valid is call, date, time and band, I would hope that is all that XMLog looks at when you validate a LOTW ADIF file.

3194. Beta Version 6.27

Yahoo group: XMLog
Date: 2010-03-18 19:57:31 UTC
From: w1ect
Topic: 3194 Message: 3194

Beta version 6.27 of XMLog is now available at www.xmlog.com/beta

This beta version has a new "World Map" window that can display gray line areas (day/twilight/night). Normally the gray line display is keyed to the current time but an optional World Map toolbar allows scrolling the display through the day.

The new World Map can also display a Mercator map as well as the previous Great Circle map.

It seems to be pretty solid now after months of diddling, let me know what you think.

That surely is not the way to handle this. All callsigns in CT,CT3 and CU changed last year. There will be MANY of these coming on the bands now - for instance I worked CR1Z last night, also in Azores.

These changes should be reflected in XMLog's countries list, the file prefixes. I may have modified my one myself some while ago, I cannot remember, but mine now reads:

CT3,Madeira Is.,AF,33,[33/17],ADIF=256,
CQ2,CQ3,CR3,CS3,CT3,CQ9,CR9,CS9,CT9,XX3,!,
CU,Azores,EU,14,[38/25],ADIF=149,
CU,CQ1,CR1,CR2,CQ8,CR8,CS4,CS8,!,

which includes all the current CT3 and CU changes - and interprets CQ8Z correctly without adding it to the dxpedition list.

I finally got 6.27 installed after a lot of problems, I'm running XP. During the install process my special mouse configuration magically changed to standard configuration. My screen resolution changed to a point where my screen was useless, it lost sync. I tried a manual restart but didn't solve the problem. I had to restart in the safe mode to correct the problems. I have enough computer knowledge to resolve all the problems and 6.27 appears to be working perfectly now for 3 full days. The problems started when the install program said it needed to update dlls. I had to restart the computer twice to get the setup to run after the dlls were updated. It appears something in the update process became corrupted and caused the problems. Hopefully this info helps Mike troubleshoot the problem......

It could of course just mean that you have had no new LOTW
confirmations since last time you did a download....

I did a download last night and it worked just fine. The LOTW site is
as far as I can see totally seperate from the new ARRL main site and is
unaffected by the changes.

Yahoo group: XMLog
Date: 2010-04-16 23:55:30 UTC
From: w1ect
Topic: 3210 Message: 3210

Hi, It seems that the ARRL changed the connect address used to get LoTW data when they reorganized their web pages. XMLog didn't get a bad status when connecting to the old address, it just didn't get anything in response to it's "GET" request.

There's an update at www.xmlog.com/beta that should fix the problem.

Later I'll make the address configurable so handling this kind of blindside won't be quite such a pain.

Hi Puck, Since you have a working 6.19 version installed you can probably get away with just copying mlog.exe into your XMLog install folder. Also copy the help file mlog.hlp (and if you are going to the beta 6.30 version also copy the xmlog.chm). Save the old files so you can revert if you have problems.

Mike - W1ECT

3215. XMLog Help

Yahoo group: XMLog
Date: 2010-04-26 16:58:52 UTC
From: w1ect
Topic: 3215 Message: 3215

I've just posted version 6.31 at www.xmlog.com/beta

This version has a few bug fixes as well as a new help system. I just recently moved to a Windows 7 system and I was surprised to find that it didn't support the old help file format (.hlp) by default. So starting with version 6.30 XMLog provides a HTML Help (.chm) file. The old file is still provided for pre-XP systems. Hopefully this switch won't cause problems, let me know.

One side effect of this change is that it was easy to put the help file info online - www.xmlog.com/help

3216. Menu Shortcuts for Win 7 and Vista

Yahoo group: XMLog
Date: 2010-05-12 17:00:00 UTC
From: w1ect
Topic: 3216 Message: 3216

I've recently moved from XP to Windows 7 and noticed that the keyboard shortcuts for menu items were no longer being underlined.

At first I thought this was an XMLog bug but discovered that in Vista and Win 7 this action is now controlled by a "feature". If you like having the shortcuts displayed here's how you can turn them back on:

- Open the Windows Control Panel
- Select "Ease of Access"
- Select "Make the keyboard easier to use"
- Go to the "Make it easier to use keyboard shortcuts" section
- Set "Underline keyboard shortcuts and access keys"

It looks like QRZ has changed again similar to what happened some months ago where you need an XML subscription to make it work. Other logging programs (e.g.HRD)have the same problem.

Maybe Mike will be able to write a work around like before.

3221. Re: [XMLog] QRZ

Yahoo group: XMLog
Date: 2010-06-21 00:11:06 UTC
From: N7mal
Topic: 3217 Message: 3221

QRZ has made some significant changes, but and here's the big BUT: The VE7CC terminal software is still looking up calls on QRZ. VE7CC has made no recent upgrade so it's confusing why some software works but others don't. Now the VE7CC can only see the 1st page of a call lookup. It can't go to the '''detail''' page at QRZ.
I use VE7CC software as my connection to the clusters. I connect MLOG to the VE7CC software via the local host: 127.0., etc etc. It makes changing cluster filters so much easier.
Hope this info helps.

Hi, It seems that QRZ.COM has switched their server. In the past format changes in QRZ.COM's lookup screen caused problems for XMLog but this time the request for data is being rejected. This means that it might not be just a quick fix to get things going again.

Hi - I asked Freq LLoyd, the owner or QRZ.COM, about why lookups were being rejected and here's his response:

"We're discouraging access to port 80 for mechanized callsign retrieval. It's not fair to the interactive users to let logging programs hog the html pages. Without being specific, at times a huge proportion of the HTML traffic is being consumed by automated systems that have no built-in throttle.

While it was okay for a time, the automated lookups have gotten out of hand. We had to do something."

Hi Craig, If you can't set up your backup program to ignore the alerts.mdb file you can go to the Spots History Window, choose the "Options/Colors, Fonts, Etc." menu item and set the "Maximum Number of Spots Saved" to zero.

Hi, In response to Fred's last message I asked what he meant by "discouraging access", here's his response:

"Discouraging access" means that we're actively tossing out requests that come from clients that behave in an automated manner. We have developed several techniques to detect the difference between a person using a browser and a logging program.

QRZ's policy on the matter is that we do not support logging programs that take data from our web pages. We have invested considerable time and effort in providing a high speed, reliable and effective interface via XML that all of the major logbook vendors have adopted. It has become an industry standard.

I have absolutely no sympathy for those who won't pony up $30 for a year of service. It's an extraordinarily inexpensive service, when you compare it to just about anything else out there (except for FREE). QRZ's goal is to be the best at what we do, and that costs a little money. Not much, but a little.

Anybody who's actively chasing DX and/or working towards an award spends a lot more than $30 doing so. A refusal to contribute to QRZ in exchange for a useful and reliable service is more often not based on an inability to pay but rather a desire to get something for nothing.

I joined QRZ.com and have been paying the $30/year for a couple of years now so that I could continue to use XMLog, and have had no problems since then until now. I guess that I thought that this issue had been solved then. Is my version of XMLog, v6.27, somehow set up improperly to take advantage of what Fred is talking about in his reply? Or are we all just out of luck?

OK, I guess we have to just accept that and put up with no longer being able to do call lookups from XMLog. After all, it is just a convenience, and I can always do the same from the QRZ site - I don't use XMLog's facility to print address labels myself, but obviously many do.

OK $30/year is not a huge amount but it is just one of the many other annual payments we all have to make these days. I dabble in DXing but send out very very few direct QSLs these days and subscribing to QRZ is one of those payments that I can hardly justify.

Mike,

I appreciate your efforts to make the web browsing interface work but if QRZ.com wants to limit access from logging programs then I think that the proper thing to do is respect their wishes and not try to hack into the system.

As a contributor to XMLog I would prefer that you spend your time enhancing the features of XMLog. I am a subscriber to QRZ and my interface works great!

I will be sending another contribution so you can continue your great work! Thanks for a great program.

3233. Upgrading from Version 6.31

Yahoo group: XMLog
Date: 2010-08-05 15:36:40 UTC
From: w1ect
Topic: 3233 Message: 3233

When upgrading from XMLog 6.31 on a Windows XP system you
may receive an error message "File Not Found..." or "Can't Find...".

This seems to be a problem with certain versions of the Windows XP Installer and can be fixed by going to your c:\Windows folder and deleting the file "mlog6.cab".

==========

Here's a description of what I think is happening...

The problem seems to be a bug with the XP Windows Installer which I believe has been fixed with later versions. XMLog gets distributed as multiple .CAB files (which are similar to .ZIP files). As you might expect as time goes by the size of XMLog increases and with version 6.31 the size of XMLog grew enough to go from five to six .CAB files. It grew just enough so that most of the last file was in mlog5.cab but the final chunk of this last file was in mlog6.cab. It seems that the bug occurred because there were no file names associated with mlog6.cab and the Windows Installer didn't bother to delete mlog6.cab after the install was complete. Now, why should this lingering file cause problems on subsequent installs? I don't know but the bug seems occur on just a small minority of XP systems, no doubt depending on the version of the Windows Installer.

Why doesn't the problem happen with later versions of XMLog? Well XMLog has grown again so now mlog6.cab contains some complete files abd all the .CAB files get deleted at the end of the install.

From: w1ect
Topic: 3246 Message: 3249

Well I don't know why the ARRL is cutting things so close. Is it possible that they won't have the new PJ countries defined before October 10th? In any case when they do decide the ADIF folk will have to assign new ID's for these new DXCC entities so that will add additional time to the process.

I have the next XMLog version set up so that any PJ QSOs will be updated to the appropriate DXCC country based on the QSO date. If the ARRL and the ADIF group can't get things defined before October 10th it will be annoying that the old XMLog will log PJ QSOs with the old country values, but whenever you run the new XMLog version it will update all PJ QSOS.

I believe that the ARRL has stated that any DXCC submissions will not be accepted until after January 1 so they are in no rush to define things before then. Of course, that means contacts before the official numbers and prefixes are defined will require conversion.

Well I don't know why the ARRL is cutting things so close. Is it possible that they won't have the new PJ countries defined before October 10th? In any case when they do decide the ADIF folk will have to assign new ID's for these new DXCC entities so that will add additional time to the process.

I have the next XMLog version set up so that any PJ QSOs will be updated to the appropriate DXCC country based on the QSO date. If the ARRL and the ADIF group can't get things defined before October 10th it will be annoying that the old XMLog will log PJ QSOs with the old country values, but whenever you run the new XMLog version it will update all PJ QSOS.

Until the new countries get defined and I create a new XMLog version you won't be getting alerts for all the forthcoming DXpeditions. Until then I plan to do things the old fashioned way - keep track of them on paper!

The potential new countries that have expeditions planned are:

PJ2 - Curacao Island
PJ4 - Bonaire Island
PJ5 - St. Eustatius Island
PJ6 - Saba Island
PJ7 - St. Maarten Island

Of course, some of these islands may be combined into a single new country... work first, worry later.

3252. CW Keyboard window off screen

Yahoo group: XMLog
Date: 2010-10-13 17:32:43 UTC
From: Craig - AE6RR
Topic: 3252 Message: 3252

Mike,

My CW Keyboard window is off of the viewable screen, I cannot see any off it. Clicking on it on the task bar causes a quick image to go off of the bottom of the screen.

Any ideas on getting it back on screen?

This is on a remote computer and I will need to use Remote Desktop to work on it. I do have another computer with the program installed. Can I copy a file or would an re-install be best?

Thanks & 73,

- Craig, AE6RR

Hi Craig, There's an app named XMReset that gets installed with XMLog that should do the trick. It should be in the XMLog start menu and if you don't see it there you can run it directly from the XMLog install folder.

Hi Mike,

Thanks, I started thinking about how I got it in this mess and tried logging into the system with my hamshack computer that has a monitor with a different aspect ratio and sure enough, I could see the keyboard window down at the bottom of the screen where I could grab it and drag it up some. Problem solved for now but the XMReset app sounds handy. What all does it reset besides the window position?

BTW, it is not in the start menu on my remote system but it is on my home system.

73,

- Craig, AE6RR

Subject: [DX-NEWS] [dx-check:1295] FW: New DXCC Country Code information

[Reflector : dx-check]

This information is provided, in advance, to those who use the DXCC assigned country/entity codes for programming software:

Below are what will be the DXCC assigned country codes for the new entities once they are entered into the DXCC system:

517 ? Curacao

518 ? Sint Maarten

519 ? Saba and St. Eustatius

520 - Bonaire

Note, the country codes for what will be the deleted entities will not change, they will just be flagged as deleted entities.

Online, the only place where these codes are posted is in the text version of the DXCC list. Once we officially add the new entities to the DXCC software this list will then be updated to show the official changes to the DXCC list.

Mike

I have already edited my prefix file with the new entries. I have set PJ5 to Saba/St Eustatius (wouldn't accept PJ6 for some reason, gave a syntax error?) and PJ2, PJ4 and PJ7 for the others. I have seen nowhere anything about what PJ1,PJ3,PJ8,PJ9 or PJ0 will be if anything so have not put them in at all in the alternative prefixes. Easy to add later.

And don't forget that all your old PJ QSOs now need editing to be *PJ2 and *PJ5 or the DXCC worked gets a bit confused.

You can...

Click edit - ensure 'use defaults for new entries' is checked.
Then under edit, click 'Edit defaults for new entries'. Set them all to
whatever you want....

(all my new entries default to CW 5W).

From: Dave Sergeant
Topic: 3275 Message: 3275

Mike

Many thanks for the latest update. I updated my 6.18 and have a couple of minor issues. I am running it on XP SP3.

1. In the earlier versions I was able to maximise the window from the top menu bar. The 'maximise' button is now greyed out, nor can I resize the window. I imagine this is how it is meant to work?

2. I found in my MLog folder a file 'totals' with a date of 2006. This is basically a list of all the countries, but was as they were in 2006. I manually extracted the current version from the CAB files and replaced it. Why did the installer not update it anyway?

Hi Allan, Running the XMLog uninstaller should have gotten rid of everything. XMLog doesn't save anything outside of the install folder (usually c:\mlog) so if it's gone you should be ok. I don't know why the shortcut is lingering - did you create it yourself? Anyhow, just go ahead and delete it.

I disabled the Maximize button since for the Log Window since it has no effect on the contents of the window. I'll go ahead and turn it back on in the next version if you found it useful.

> 2. I found in my MLog folder a file 'totals' with a date of 2006. This is basically a list of all the countries, but was as they were in 2006. I manually extracted the current version from the CAB files and replaced it. Why did the installer not update it anyway?

This file is where the results of a "DX/Update Packet DXCC Status" are saved. The one in the CAB file is null and is only copied on the initial XMLog install. Since it contains info on your personal DXCC status it doesn't get replaced during subsequent updates. To recreate it just do a "DX/Update Packet DXCC Status" from the Log Window.

Thanks for the explanation. I am a chap who always prefers maximised windows, not loads of little ones all over the screen. So had got used to using XMLog this way, even though most of the screen is white space. When I upgraded I found the window overlapped my taskbar at the bottom, and had to do a XMReset to get it back. Guess if most people are happy with the un-maximised window you should leave it as it is now.

Ah, I had never known that function existed - but there again I don't normally use the Packet window - once stuff has been spotted it spells the end of trying to work it on QRP... Just done a DX/Update Packet Status, just in case I need it.

Thanks again.

Hi Mike,

I will be picking up a new Kenwood TS-590S on Friday from HRO in Portland, OR. Do you have a driver for this rig yet in XMLog? If not, what setting would you suggest I use for rig control?

Thanks much and very 73.

Kevin :)

I'm in the control panel/in Add or Remove - Windows XP, I clicked on XMLog and clicked remove it removed some thing but left XMLog in place in the control panel so I clicked it again and get a window that say this (Application Removal - could not open Logfile 'C:\mlog\ST6UNST.UNS')I used control panel because I could not find Uninstall in the XMLog any where. I have run into this problem before and it takes in most case's and act of congrees to get help getting something out.

Hi Allan, Running the XMLog uninstaller should have gotten rid of everything. XMLog doesn't save anything outside of the install folder (usually c:\mlog) so if it's gone you should be ok. I don't know why the shortcut is lingering - did you create it yourself? Anyhow, just go ahead and delete it.

Hi Kevin, So far Kenwood has maintained the same basic rig-control protocol for all of their radios so hopefully this has continued. This means that you should select the generic Kenwood rig type. The only variation that XMLog might be concerned with is the baud rate - older Kenwood rigs had it hard coded at 4800 while the newer rigs provide an adjustable baud rate with the default value sometimes being something other than 4800. So, just be sure you match the speed between XMLog and the rig and go ahead and push the speed up to 9600 or beyond if the 590 provides the option.

> OK Guys, Don't diddle the prefix file I've got the update at
> www.xmlog.com/beta
>

There is a problem with this prefix list concerning deleted entries. I was amazed to find I had seemed to have worked stations in the deleted OK and DL entries (*OK and *DL). The updated prefix list for most of the deleted entries has the prefix lookup line, eg:

DL,Fed. Rep. of Germany,EU,14,[52.5/-13.4],ADIF=230,
DA-DR,Y2-Y9,!,

*DL,Germany,,,ADIF=081,Deleted=1973-09-16,
DA-DR,!,

If you add a new DL QSO it appears to get changed to DL(deleted) as it finds the lookup in the deleted list first.

I have gone back to my earlier (self modified) version which does not have the prefix line in any of the deleted countries and works correctly.

Hi Dave, It seems that version 6.35/6.36 has a problem with the new feature that tries to identify deleted countries based on the QSO date - it doesn't work if the "Options/Log Fields..." Date Format option is set to "DD/MM/YY".

Dave, Do you have the date format set this way?

I have a fix for this problem (version 6.37) that I'm about ready to post at www.xmlog.com/beta

From: Craig Bradley
Topic: 3246 Message: 3290

Mike,

I downloaded 6.37 (first update for me after the PJs) and it appears to work OK. It updated my log and I now have two new deleted entities.

I saw a spot for a PJ4 and it shows in red on the spots map and that I need it for all modes/bands - this is correct.

Then I saw a spot for PJ2DX and it shows in blue and that I only need it on RTTY+, 160, 30, 12 and 6 which is the status for the old PJ2, I have not worked PJ2 since 10/10/10.

I looked at my DXCC checklist and I see *PJ2 with all of the modes/bands worked correctly and the new PJ2 shows no Qs.

Any ideas?

I had previously done an update packet DXCC status with no luck.

However, I closed XMLog and restarted it, then I did a test spot (yes I hate when people do that but there were no spots). That one worked correctly and showed up in red on the spots map.

Problem solved.

Hi Allan, XMLog uses the standard Windows Installer supplied with Visual Studio so I can't provide much help when things like this crop up. I guess the un-install didn't complete for some reason and XMLog didn't get removed from the list of installed applications. If the install folder (usually c:\mlog) and any shortcuts got deleted then all the software was removed but for some reason it didn't get removed from the list of installed apps. Maybe some searching around the web would turn up a hint on how to hack this list directly so you could clean up this little mess that was left behind (in a file somewhere? or perhaps in the registry?). XMLog doesn't create any registry entries itself.

Are you trying to install it directly from inside the WinZip archive?
Far better to extract all the files to a temporary folder (that you
have write permission for) and install from the extracted files.

From: john vernaleken
Topic: 3056 Message: 3304

Hello All,

I know this is a problem with my PC and not with XMLOG. I am running Windows XP with Service Pack 3.
When trying to add the latest version of XMLOg I get the message Copying Files Please Wait
I was finally able to minimize the screen and there was a message:
INSTALL program not responding.
I suspect I have a damaged program somewhere.
Does anyone have any hints or suggestions?

Thanks

I had this problem, not with xmlog but other programs, when running
xp. I'm sorry that I don't remember the particulars, but I do remember
that I installed a patch/fix that I downloaded from Microsoft.

I think that the problem is that service pack 3 actually deletes some
files needed by some programs to install correctly. Look for a fix for
the install routine.

Puck I am by no means a computer guru but what you are doing is not completely a good idea, in fact I think it's a bad idea. It is my understanding the install program not only updates the 'mlog' directory but also updates some windows things in order to get the new/updated version 100% compatible with windows.
If I'm wrong I hope somebody corrects me.......please

Subject: [XMLog] Re: Install Problem

I have a similiar problem trying to update XMLog. I also use Windows XP SP3. I get the same message but in my case the computer crashes and the only way out is to cut the computer off and reboot. Apparently the install program for XMLog calls a program or function that I no longer have or that is currupt. I've not yet discovered a fix!

My work-around was to load the update onto my wife's computer which also runs Windows XP SP3 and install it there. I then copied all of the files from her "mlog" directory to my computer into my "mlog" directory. I backed it up first just in case. After doing that I had the new version on my computer with no problems.

I wish I could discover why my computer will no longer run the XMLog update installer. It used to work!

I just confirmed what I was saying in previous response. I watched the
install very closely and there are 'windows' things that are extracted to
the windows system 32 directory.
I am also running XP SP3 and had no problem with the install.

That may be Mal but my XMLog version 6.37 works fine with no problems. It was the only way I could get my program updated on this computer.

What I need is a computer "guru" to tell me just what XMlog's setup program is calling in Windows to run. I must have a bad windows program or function on my computer.

I have installed 6.38 on 3 Win XP computers (SP3) with no problems. Two of them are running XP Pro and one is XP Home. They have all of the latest updates from Microsoft.

You might want to go to the Microsoft web site and be sure that you have all of the latest updates.

Good luck & 73,

Hello All,

I am still working on my install problem. Would anyone know the name of the Microsoft program that is used to do the install?
Since I am having the same problem when trying to do installs of other software I am sure it is my PC.

Thanks

Hello All,

I really did not solve the problem with Install Shield but I was able to install the latest version of XMLOG. What I did was:

1. Saved the XMLOG file from the Web Site
2. Opened the SETUP.EXE
3. The normal Install started
4. Completed the normal Install
5. XMLOG is working using latest version

I have no idea why my problems started but I now have a work around.

Thanks to all who sent me possible solutions.

3320. Russian prefixes

Yahoo group: XMLog
Date: 2010-11-30 10:32:52 UTC
From: Dave Sergeant
Topic: 3320 Message: 3320

After importing my CQWW log yesterday I found XMlog (6.38) had
incorrectly assigned some of my Russian QSOs. The Russians keep
changing their callsigns and I guess it is hard to keep up..

UA7 etc is in European Russia (UA) and not in Asiatic Russia.
UA2F is the only prefix used for Kaliningrad nowadays, all other UA2
calls are in European Russia (UA).

I have modified my own copy of the 'prefixes' file to reflect this.

I seem to remember I flagged the UA7 one last year, surprised it hasn't
been changed yet.

From: N6NG
Topic: 3322 Message: 3322

Nope... sorry Bruce...

Have looked several times since I saw the original problem
and haven't found an answer... Still running on 6.33 here
and it seems to be fine.. Would like to catch up but I
just get frustrated..

If you hear anything, let me know if you will... I'll do likewise
but am mostly hoping the next version will install cleaner...

Yahoo group: XMLog
Date: 2011-01-04 19:25:09 UTC
From: DennisJ
Topic: 3303 Message: 3323

Finally got 6.38 installed.. After reading message #3233
I went back and deleted mlog6.cab and then tried to install
6.38 which worked fine.

I then tried to install 6.39 only to find I get a message to
"insert disk 6". Disk 6? I don't have a disk 6. So
on to the next problem. At least I'm up to 6.38 and mostly
up to date.

Good luck Bruce.. I hope it works for you if you
haven't already succeeded....

Hi Dennis, I changed the organization of the XMLog install files such that it only uses one .CAB file now. It previously created multiple .CAB files so that they could be spread over several floppy disks, needless to say this is no longer very useful. Hopefully this will fix the problem although the problem seems to be that the installer has some kind of memory of what has gone before. Deleting that orphaned mlog6.cab file was helpful in some cases and this change might make that unnecessary.

Anyhow, I've posted this new version (6.40) at www.xmlog.com/beta

3326. Connect menu on Spot Map window?

Yahoo group: XMLog
Date: 2011-01-09 20:19:57 UTC
From: Craig Bradley
Topic: 3326 Message: 3326

Mike,

I usually keep XMLog running on my shack computer with the Spots Map window open on top or the Packet window. Even though I have setup "Keep Alive", I occasionally get disconnected. To reconnect, I need to bring up the Packet window and reconnect. If the Spot Map window had a Connect drop down menu, this would be much simpler. Could this be incorporated in some future version?

Even better would be an "auto reconnect" option that would detect a disconnect and try again after some programmable time. Sometimes the sites go down for a short period of time.

Thanks for a great program and HNY!

Craig the best of all possible worlds is to use the VE7CC software to connect to whatever node you use and then connect the mlog terminal to the VE7CC software. You will have everything you asked for plus a lot more. I've been doing this for many years and never have any hiccups, but most importantly I'm connected 24/7 365

3329. Problem with Spots Map using 6.38

Yahoo group: XMLog
Date: 2011-01-23 01:17:28 UTC
From: Kenneth Moorman
Topic: 3329 Message: 3329

I just installed v6.38 and now the Spots Map is showing every spot that comes along in red, implying that I have no confirmation for that entity. But, of course, I do for most of them. No other colors are being used. I have opened "Times, Colors, etc" window from "Options" on the Spots Map and have unchecked "Show un-needed spots" and "Show inhibited spots" to no avail. Somehow, the program does not know what entities I have as confirmed. How can I fix this?

Thanks,

Ken, NU4I

3330. RE: [XMLog] Problem with Spots Map using 6.38

Yahoo group: XMLog

From: Kenneth Moorman
Topic: 3329 Message: 3330

I think I found the problem...I needed to Update Packet DXCC Status on the Packet Window. Now I am seeing blue indicating that I need that entity on that band/mode and entities that are confirmed seem to be staying off the spots map entirely. I don't recall having to do this right after installing an update before. Sorry for the extra noise!

Topic: 3326 Message: 3334

Kevin,

I was getting disconnects once or twice a day before replacing the router but now it won't stay connected for more than an hour, sometimes only 10 minutes.

I have no idea why a new faster router would cause this.

I did change the "Keep Alive" to 1 minute intervals and that helped a little but disconnected in an hour for the first try. I just reconnected before I typed this and it disconnected after 7 minutes. I got 5 spots and 4 "dir/new" from the Keep Alive before it disconnected.

I have tied N7OD and W4UAT packet servers so far with the same results.

My Internet browsing is working much better with the new router, which was the main reason for getting a new one. I was also needing to unplug the old one and restart once a day so it was "broke".

Hopefully someone out there will have an idea.

Topic: 3326 Message: 3335

Hi Craig and all: This subject was recently covered heavily in the VE7CC mailing list with, in my opinion, no real resolution.
I personally use a linksys router and never/ever have a problem. I am connected to the VE7CC node 24/7 365. While, at the same time, 3 or 4 other guys can never stay connected, using linksys routers. I try to keep up with the firmware updates and it appears to have been valuable. One of the lines in last years firmware update contained this line:
"" Resolves issue with router disconnecting from few particular online game servers. ""
When we make a telnet connection via port 23 we are actively interacting with another server, whether it be a game or DX Cluster, port 23 doesn't know the difference, it just see's data on that port.
I also have never 'dinked' around with the settings in the router. They are all factory default because I'm not smart enough to know what I am changing.

I know this didn't solve anything except now you know you're not alone with this problem. It is being discussed on other mailing lists.

Hi MAL,

I posted this on a list that the packet cluster sysops use and I got one reply form an operator that uses the Netgear N600 also both for his server and a client that monitors 24/7 and he doesn't get disconnects nor does he get complaints of any.

He says that the problem might be with XMLog.

I am going to try his service and see how that goes. If I still get disconnects, I will do some testing with another client program.

My router does have the latest firmware.

If I get any more info I will post it here.

3337. ? character appearing in "QSL" field

Yahoo group: XMLog
Date: 2011-01-28 21:30:52 UTC
From: n5ftr@swbell.net
Topic: 3337 Message: 3337

Greetings,

I have been using XMlog for about 10 months now and really like it for all the labels I print for the DX stations I assist. Therein lies the rub: Whenever I import a log file (.adif) that they send me the log ALWAYS shows a ? in the "QSL" field. I would love to be able to remove the ? or, better yet, not have it show in the first place. I have tried everything I know and have had no success. Any assistance would be greatly appreciated.
73,
Buzz - NI5DX

3338. Re: ? character appearing in "QSL" field

Yahoo group: XMLog
Date: 2011-01-28 22:30:34 UTC
From: w1ect
Topic: 3337 Message: 3338

Hi Buzz, The ADIF spec has a couple of fields that apply to QSLs sent or received. There is a flag field that indicates whether a card has been sent or received and a seperate field that specifies the sent or received date. Since XMLog only displays the sent/received dates the way it handles an ADIF file that has the sent/received flag set but no date supplied is to set the date to ? (indicating "unknown"). Correspondly, if the QSL sent/received field is set to ? and you create an ADIF file the "sent/received" flag will be set with no date field.

Here's the ADIF fields:

"QSL_RCVD" = Y, N, R, I (Yes, No, Requested, Ignore)
"QSLRDATE" = yyyymmdd

"QSL_Sent" = Y, N, Q, R, I (Yes, No, Queued, Requested, Ignore)
"QSLSDATE" = yyyymmdd

The spec allows for the setting of QSL_RCVD, without a date and vice versa.

Mike - W1ECT

3339. RE: [XMLog] Re: ? character appearing in "QSL" field

Yahoo group: XMLog
Date: 2011-01-28 23:13:25 UTC
From: Buzz
Topic: 3337 Message: 3339

Mike,

Thanks for the tip. I went into the settings and found I had left the ? in the QSL field. I deleted it, imported a file into a temporary log and all showed up fine WITHOUT the ? in the QSL field.

I knew how the date was displayed when sending via Direct or via the Bureau. For me, who sends thousands of cards through the buro every year, having the date sent shown is great. The previous log program I had used for 20 years showed only D for direct or B for buro. I had no way of telling when the card was sent. That problem is resolved with XMlog.

Thanks again.

73,

Buzz

Hi Mike,

Yes, I have tried 3 or 4 other clusters. I have been working with n4zkf and he has 3 clusters going. He has been checking his logs to see the disconnects.

So far it looks like I only get disconnected after a period of inactivity. Usually there is one "keep alive" message sent (dir/new) right before the disconnect. I have tried turning off the keep alive but I still get a disconnect after the activity is quiet for a while.

I am currently at a second QTH near Lake Tahoe and I am going to see if I have the same problems here. The frequent disconnects started right after I replaced my board band router at the home QTH. Before that I would get disconnected once or twice a day but now it can be as soon as a few minutes if there isn't much activity.

There are a lot of variables in the equation.

Several people (including MAL) have recommended the VE7CC software as it will auto reconnect. That is why I was wondering if auto reconnect would be possible in XMLog.

73,

- Craig, AE6RR

I am running tests on two clusters from my 2nd QTH in Truckee, CA from two computers both with XMLog. So far I have been connected for over 24 hrs with no problems.

I am beginning to believe that it is either the router or the ISP causing the disconnects at my other QTH.

3348. PJ update

Yahoo group: XMLog
Date: 2011-02-28 18:44:33 UTC
From: Nelson Wittstock
Topic: 3348 Message: 3348

I just installed version 6.40 and expected my new PJ confirmations to reflect the country changes but the log entries still say PJ5 is Saba/St. Eustatius. I understood that changing to this version of XMLog would change the country automatically but this did not happen. The display of the DXCC Country list still reads PJ5 as Saba/St. Eustatius. How do I change this to reflect the current country status?

From: w1ect
Topic: 3352 Message: 3360

Hi Craig, Choose the "Options/HF Rig Port Select" and check the "Data Mode" setting. If you're using a PC sound card to drive your rig in AFSK mode you probably want to pick the "LSB or USB" option.

If you pick "FSK" the command sent to both the K3 and the Kenwood is "MD6;" to set FSK mode - this mode is used when you want the rig to provide the frequency shifting, not the PC.

Mike - W1ECT

Hi Mike,

I am using true FSK with hardware keying via a microHAM microKEYER. The Data Mode is set to Data/FSK in the menu.

I checked the manual for both the K3 and the Kenwood TS-2000 and you are correct that MD6 should be FSK, MD9 would be FSK-R (reverse).

I can set the radio to FSK mode then click a RTTY spot and it goes back to FSK-R mode, very strange.

Are there any differences for 40M and below where you would select LSB instead of USB in the code? I just tried this again on the spot for 4A4A on 12M RTTY with the K3 with both K3 and TS-2000 set as radio types (the K3 uses the Kenwood commands). I am using OmniRig, could that be the problem?

Hi Craig,

> I am using OmniRig, could that be the problem?

Yes, it seems OmniRig has it's own idea of how to set FSK modes. Check your OmniRig install folder and you should find a folder named RigIni with a bunch of .ini files that define commands for various rig types. If you open Kenwood.ini you'll find it has a map of mode numbers -> commands. Normally when XMLog builds it's own commands to set "Data/FSK" mode it selects the "normal" versus the "reverse" FSK mode appropriate for the rig. However OmniLog doesn't have a FSK-normal/reverse, just FSK-upper/lower. As a result when setting FSK mode via OmniLog XMLog always selects OmniMode's Digital/Upper (PM_DIG_U) mode. This was an arbitrary choice, I didn't know what the "standard" should be - aways upper, always lower, or band dependent. You can do some experimenting and let me know. For now you can hack the OmniRig files Kenwood.ini and K3.ini such that both PM_DIG_L and MP_DIG_U both send a MD6;

3365. RE: [XMLog] Re: K3 & Kenwood go to FSKR when clicking RTTY spots

Yahoo group: XMLog
Date: 2011-03-13 17:10:06 UTC
From: Craig Bradley
Topic: 3352 Message: 3365

Hi Mike,

Thanks! That solved the problem. There was a Kenwood, a TS-2000 and a K3 file to edit; they all had the same problem. I had to re-boot the computer though to get the changes to take effect. Then I had to wait for another RTTY spot.

I am not a RTTY expert but I believe that standard FSK is used on all bands (not FSK-R). Maybe someone else can chime in on this. I think that Kenwood radios default to reverse FSK keying using the FSK input on the rear panel (it can be changed in a menu) but FSK is the mode required to demodulate the signal. Maybe this is where the confusion originated.

How does XMLog "know" to select RTTY or FSK, does it need to find the word "RTTY" in the spot?

Hi Craig, Yes, XMLog actually looks for for a mode in the spot comments. So not only RTTY will set data mode but also PSK31 etc. This is probably not what you'd want - I'll check in to limiting it to RTTY. The problem is that the mode found in the comment also drives the packet alerts where RTTY/PSK/etc are all equivalent for DXCC - so the current code doesn't bother to save the actual mode, just the mode type.

Hi Craig, XMLog chooses CW vs SSB based on the US band allocations unless the comment contains a data mode, then the normal CW/SSB choice is overridden.

OK Vince, If the com port does not show up in the Windows Device Manager's list there's something wrong with the way the driver for the device is installed. Check the home page for the company who made the device and make sure you have the latest driver installed (and also that it's the one appropriate for the version of Windows that you are running).

3374. RE: [XMLog] Re: XMLog Packet Window Disconnects - solved

Yahoo group: XMLog
Date: 2011-03-20 20:09:50 UTC
From: Craig Bradley
Topic: 3326 Message: 3374

All,

The frequent disconnect problem appears to be solved. It was my router.

The other day I logged into the router and it said that there was an upgrade to the firmware available. The message also stated that one of the fixes was a frequent disconnect problem for online games. I upload the new firmware and I have been connected without a problem several days now.

Here is my current version:

<javascript:loadhelp('_info','hard_ver')> Hardware Version

WNDR3700v2

<javascript:loadhelp('_info','firv')> Firmware Version

V1.0.0.8

<javascript:loadhelp('_info','lang_ver')> GUI Language Version

V1.0.0.67

Thanks for all of the suggestions and help!

I am running tests on two clusters from my 2nd QTH in Truckee, CA from two computers both with XMLog. So far I have been connected for over 24 hrs with no problems.

I am beginning to believe that it is either the router or the ISP causing the disconnects at my other QTH.

3376. Exporting a specific date range

Yahoo group: XMLog
Date: 2011-04-01 12:34:09 UTC
From: n5ftr@swbell.net
Topic: 3376 Message: 3376

Hello,

I cannot find where it is possible to export just log entries from a specific date range. For example, if I want to export ONLY the QSOs in the log from February 7, 2011 through March 23, 2011, is that possible?

When I use the EXPORT function I see only the option to export the entire log or currently selected log entries (which I assume are those for a specific station).

Any assistance on how to export just a certain date range would be greatly appreciated.

Hi Buzz: What you want to do is available. I have to do it several times a year whenever I enter a contest log and forget to export the previous QSOs to LOTW...
First you click on the 'select' button
Then in the date field enter >=2/7/11,<= 3/23/11
Then click the 'search' button
The important part when you do this is no spaces

Good Luck

3383. Call lookup window problem

Yahoo group: XMLog
Date: 2011-05-17 01:15:27 UTC
From: Craig Bradley
Topic: 3383 Message: 3383

Mike,

I am using version 6.44. 6.40 had the same problem.

If I click on a call in the main log window, the call lookup window opens with the QRZ.com info (OK). Then if I leave the window open and click on another call like the QSL via call, the new call listing appears in the call lookup window but the buttons "-> Mail" and "-> Log" disappear. The buttons used to be there in the older versions. I found it handy to "fix" the QRZ entries where there is no QSL address, I could then click on the QSL manager's call and fill in his address in the log entry to print the labels.

Another feature that would be nice when QSLing would be to have an option to open the QRZ.com listing in the browser to check for any special instructions.

Thanks for looking into this Mike. It does appear strange.

Is there any possibility of adding a feature to open a call in a QRZ browser window? That would be really handy as I have found that many DX stations will only have the full QSL instructions in the info on their QRZ.com page. Things like 3 green stamps, IRC only, etc.

3396. Windows 7 installation problem

Yahoo group: XMLog
Date: 2011-05-29 17:55:25 UTC
From: V. Zugcic
Topic: 3396 Message: 3396

Hi all

I just joined XMLog group, thank you and would like to try XMLog for the first time. OS is Windows 7 and it doesn't let me install this software.

During installation process, in the screen where I have to choose (or accept default) installation directory, I have Exit Setap option only.

Tried to search XMLog group for the answer, but I have found none.

Is there a way to install XMLog into Windows 7? Thank you very much!

Thank you Will, it offers me c:\mlog by default, but the button should show Accept or Next, not Exit Setup as it shows in my issue.

Tried to change directory to c:\xmlog and later in my user's folder, but there was always only Exit Setup button.

I'm going to see what I can do later afternoon and the group will be informed, thank you!

Date: 2011-06-19 17:54:14 UTC
From: Ken Anderson, N0AS
Topic: 3404 Message: 3406

When you import, the imported qso's are the "selected" records (might not be quite the right word). Anywho, go to File, and open you're complete log and all qso's should be there.

From: w1ect
Topic: 3404 Message: 3407

Hi, XMLog was not recognizing an LF (linefeed) as a line break, only carriage returns (CR's) and CR+LF's were being handled. I guess some UNIX apps can use a bare linefeed as a line break. I'll post a fix at www.xmlog.com/beta soon.

From: kb1ckt
Topic: 3412 Message: 3412

Ok, I wanted to play with electronic logging, and I found this program. I don't have Windows at home, so that may be the issue. I have Ubuntu, and Wine, and the program seems to come up--I haven't tried to connect to my radio, much less anything else.

When I create a log, it tells me it can't create it. No file with the extension of .log is made. However a .mdb with the file name I selected is made; and that file I seem to be able to open and run with.

Is this just a Linux issue? I just haven't felt like buying a new home computer to run Windows (8 year old machine, use Win7 at work, not sure about going back to XP, etc).

Thanks

Shawn, I don't know much about Ubuntu or Wine, but I run XMlog on Vista and Win7 as well as my old computer with XT. I recommend that if you are going to buy a Windows machine that you go with Win 7. Win 7 is 1.5 years old now and most of the bugs are gone. Vista is pretty old and XT is over 10 years old so they are way obsolete and not well supported. I run XMlog in C: still rather than the program file, but that problem may not be still with us with the newer versions. Mike, W1ECT maybe will update us with his latest recommendation about that, or maybe the installation instructions cover it.

Oh, I use Win7 at work and am getting used to it. No plans for running XP--that's why I wasn't going to bother with getting XP onto this computer. No sense in going backwards. What might be nice is a new netbook, that way I could take the log with me when portable. Someday...

Anyhow, I'm starting to enter in contacts, now I have to figure out what to do with my FD log (and a bunch of other stuff). Just seemed strange that I couldn't use the *.log file like the help file says--but the *.mdb works. Beats me.

Topic: 3416 Message: 3416

First off, I seem to have the awards turned on, whereas before there was a name and notes section. What did I hit, and how do I turn it off?

Second, looks like I can export a csv as a template (simply export my log, simple enough). But I only see import for ADIF. I don't see import for csv. I have a few years of logs that I'd like to slowly add, and XMLOG is installed on my non-portable machine. Can csv's be imported?

Thanks
Shawn

Duh, ok I found out what I did on the view.

Question: how do I record *my* QTH? I've operated over the years from at least 5 locations.

There is a small button in the lower left corner of the main logging window if you are in the mode that shows QSO/QSL info the legend next to the button will say "Show Award Info", you must have clicked that. When you are in Awards Tracking, it will say "Show Address Info". If you click it you will get the address field. Just keep clicking that button until you get back to the field you want.

You can select which Log Field Groups will be displayed by clicking Options, then Log Fields, Fonts, Default File. and select the Log Fields tab in the window that pops up.

You can only import ADIF files, this the standard format used by most logging programs, hopefully your old programs will export in this format.

CSV files are useful if you want to export data to Excel and analyze it.

I hope this helps.

Use Options/Station Info, you can setup multiple profiles for your different QTHs. When you import logs you can select which profile to use for that log.

There is not standard for what data in included in a csv or what order that data is sent. I imported a large csv file by writing a basic program to convert the csv to ADIF. You will need a separate program for each type of csv you have. To overcome the different formats used for data storage in the various loggers is the reason for ADIF. You may want to study the specifications for ADIF to understand.

Why are you working on a computer that does not have XMlog installed. The program is share ware so you can use it for free until you have used it enough that your concience bothers you. If you are using someone elses computer, it will run just fine on a thumb drive and I am strongly considering using one all the time to be able to work with my lap top or desk top as I need. The ADIF is the only protocol that identifies the data with the log block and you can include or omit data, or put it in any order, so that all compliant programs can exchange data. It is not a good candidate for fast entry of paper data. The XMlog program itself is much better.

My primary travel computer is a netbook that runs Linux--Xandros if I recall correctly. I looked at it the other night, and tried to figure out how to install Wine on it, so I could run Windows programs; didn't get far. Have to try again, which would take care of that problem.

I did not know XMLog would run on a thumb drive; will have to try that. My work computer isn't supposed to have non-work programs installed on it; and I usually use my breaks for other stuff. But it might be nice to once in a while enter data there. At least that is a windows machine. When I visit the inlaws I can play on their computer, so a thumb drive might work great there, for when I am watching TV and playing on the computer.

Thanks.

I had a major meltdown, and even my back ups were fried. What I need to do is download all LoTW records I posted from 1/1/10 to present so as to fix what is missing in my log. 1976 to Jan. 2010 is OK. But from 1/1/10 to present all is gone.
I did upload all to ARRL all just hours before the lightning storm hit, so all is intact there, but I will need to download from ARRL 1/1/10 to present. To be honest, I really don't know how to do this, so any idea's would help.....BUT:

HERE is my MAIN problem: On the DOWNLOAD LoTW PAGE: Under the DESTINATION heading....ALL is now BLANK. Somehow I must have deleted it!? WHAT should be there.

At the moment do absolutely nothing. ST0R is the call they MAY be using. If IARU allocates a new prefix block before it starts then they will be getting the licences changed to that. Then of course you will have to actually work it - with my 5W and a longwire I don't think it will go in my log before 2012.... In due course it will be added to the countries file in XMLog, or you could add it yourself if you become one of the lucky ones.

I know various folks are getting all excited about this one. Personally I don't really know what the fuss is about.

Hi Steve, I'll handle this the same way as the recently added PJx DXCC additions. As soon as the ITU prefix is assigned I'll make a version of XMLog available that will automatically update any ST0R (etc.) log entries to the appropriate new prefix.

Until then XMLog will "guess" the wrong prefix for ST0R and you can manually change these from ST/Sudan to ? if you find that annoying.

Hi Stan,

Sorry to hear about your PC crash. I've actually had very little experience with LoTW outside of implementing support for XMLog, I don't use it myself.

Hopefully the folk here can give you some advice on how to download your LoTW records. One thing you need to be aware of is that LoTW does not save all the fields that appear in the ADIF file that you uploaded to the ARRL. This means that you will lose some of the original data.

Once you download the LoTW records let me know if you have any problems importing them into XMLog.

I've always been paranoid about catastrophic PC hard drive crashes and I have a couple of external USB hard drives that I use to back up all my important files. I keep these drives stored in a "fire proof" file cabinet. I suppose the next level of prudence would be to keep one of the drives off site.

It is easy to download your QSOs from the LOTW site:

https://p1k.arrl.org/lotwuser/qsos?qsoscmd=adif

Just enter the start date you require, tick the 'Include QSL detail'
and then click 'download report'. This will be an ADIF file that you
can import directly into XMLog.

Thanks Mike!

If I hear any news on a new call sign, I will post it here. According to Paul, N6PSE they may operate with the existing call if the ITU does not assign a prefix before the operation.

For anyone that is interested you can find the expedition's web site here:

I think you are talking about the download/validateLOTWdata pane within XMLog, nothing to do with the LOTW website (where I suggested you download it from).

On that pane, the destination field here contains c:\mlog\LoTW

From: w1ect
Topic: 3438 Message: 3439

Take a look at the ADIF file with a simple text editor like NotePad. The QTH info should be in a a field named "QTH". If the field is not there it didn't get exported by DM780 for some reason. If the info is there but contained in a field with a non-standard label you can do a global change for that field, for example change all occurences of <WHATEVER: to <QTH: (be sure to save a copy of the original ADIF file before you do any editing).

If there's some other problem send a copy of the ADIF file as an email attachment to support@...

From: w1ect
Topic: 3438 Message: 3440

OK, I got your ADIF files by email. If you open these files using a simple text editor like NotePad or WordPad you will see that the frequency fields have their values set as "0" which is why the XMLog frequency fields wind up as "0.000". The QTH values seem to be being imported OK.

You'll have to check with the people who provide the software that did the ADIF export and ask them what you need to do to get thier program to export the frequency correctly.

In the next version of XMLog I'll make a change such that frequency values of zero wind up as "?" instead of "0.000" (which doesn't solve your problem).

3443. bug report - wrong country guess.

Yahoo group: XMLog
Date: 2011-08-01 08:53:55 UTC
From: Bob Vaughan
Topic: 3443 Message: 3443

I have an entry in my logs for KG6I, who is local to me (SF Bay Area), however XMLog guesses that the country is JD1/M Minami Torishima (formerly Marcus Island).

According to the AC6V website, the previous prefix was actually KG6IF, KG6IG and KG6IJ were Iwo Jima, and KG6 was Guam.

Of course, 2x3's beginning with KG6 was assigned in California starting in 2000, and the 2x2's and 2x1's were long gone by then.

3445. bug report - 33cm incorrectly reported as 35cm in exported ADIF

Yahoo group: XMLog
Date: 2011-08-02 11:42:41 UTC
From: Bob Vaughan
Topic: 3445 Message: 3445

I exported a ADIF to upload to eQSL, and when I tried uploading it, eQSL spit out the following error:

YYYYMMDD=20100912 HHMM=2002 Call=WA6KLK BAND bad: 35CM

The ADIF record looks like this:

<QSO_DATE:8:D>20100912 <TIME_ON:4>2002 <CALL:6>WA6KLK <FREQ:7>927.500
<BAND:4>35cm <RST_SENT:2>59 <RST_RCVD:2>59 <MODE:2>fm <TX_PWR:2>35 <DXCC:3>291
<COMMENT:10>specra D37 <GRIDSQUARE:4>CM89
<STATION_CALLSIGN:5>AF6RR <OPERATOR:5>AF6RR <MY_CQ_ZONE:2>03 <MY_ITU_ZONE:2>06
<MY_GRIDSQUARE:6>CM87wj <MY_LAT:11>N037 24.200 <MY_LONG:11>W122 09.940
<MY_CITY:8>Stanford <MY_CNTY:14>CA,Santa Clara <MY_STATE:2>CA <MY_COUNTRY:3>291 <EOR>

Note the <BAND:4>35cm

When I changed it to 33cm, it uploaded without errors.

3446. Re: [XMLog] bug report - 33cm incorrectly reported as 35cm in exported ADIF

eQSL seem to be wrong. The official spec at
http://www.hosenose.com/adif/adif.html has your 902MHz band as 35cm
(see table half way down). But at eQSL
(http://www.eqsl.cc/qslcard/adifcontentspecs.cfm) you will see it has
33cm for 902-928. You need to raise it with eQSL.

The current version of ADIF is 2.27; this version is employed by both eQSL and LotW.

A copy of the current version can be found in

<http://www.dxlabsuite.com/ADIF.htm>

3448. Re: bug report - 33cm incorrectly reported as 35cm in exported ADIF

Yahoo group: XMLog
Date: 2011-08-02 13:10:06 UTC
From: Bob Vaughan
Topic: 3445 Message: 3448

Interesting. This is the first time I have ever heard the 902Mhz band referred to as 35cm..
Everything I have seen shows it as 33cm, including the current (v2.2.7) ADIF spec at
http://www.adif.org

http://www.adif.org/ has the versions going back to 2.1.4 (2003), which also shows 33cm.
The version shown on hosenose is v1.0, which is obsolete.

It looks like eQSL adheres to the current spec, as it should.
WriteLog also appears to adhere to the current spec.

If I search online, most references that I find to 35cm band are referencing pirate radio
in Europe in the 860Mhz range.

http://www.wavelengthcalculator.com shows that 902Mhz is 33.2cm,
and 850Mhz is 35.2cm.

I suspect that the original 35cm designation in v1.0 was in error, and it was corrected in
later revisions.

3449. bug report - date checking fails to find invalid dates on months < 31 days.

Yahoo group: XMLog
Date: 2011-08-04 16:03:45 UTC
From: Bob Vaughan
Topic: 3449 Message: 3449

I made a typo, and entered a couple of qso's as 4/31/11.

XMlog took the dates, and did not complain. I only noticed it when I tried to upload the ADIF to eQSL, and the upload crashed with an invalid date error.

Further tests show that while XMLog will kick out dates >31, it does not check for months of 30 days or less.. For instance, it allowed me to enter 2/31/11 without complaint.

Is there a way that the awards tracking within XMlog can also track DXCC and WAS based on confirmed contacts in the LotW fields?

It seems to confirm for awards tracking only the ones I have QSL fields filled in.

Thanks for any assistance you might have.

Are downloading the file from LOTW? Then applying the data to your log? I wasn't clear if you were or not.

Then when you run the DXCC reports, for instance, you need to check "include LOTW confirmations" box.

Hi Mike: Glad there are some other wise people using Mlog besides me. I use Mlog exclusively for DX contests, etc. but have a spread sheet using Word to keep track of everything. This might be the simpler route. Once info comes in for paper QSL, LotW they are put in the spreadsheet by band and mode. I use one color highlighted for LotW and another highlight for paper once they are worked. When submitted I place an * in the box and when confirmed I exchange the *with an X. This may seem cumbersome but it works. GL on your search.

That seems decidedly cumbersome.

It is easy to get XMLog to just show LOTW confirmations. Assuming you have downloaded all your LOTW confirmations and imported them into XMLog - press select and type a date into the LoTW Rcvd box - I use 1/1/1 which predates when LOTW started. That will grab just the LOTW confirmations, which you can access via the normal Awards menu.

All 57,000 of my QSOs since I started in 1969 are in XMLOg, there is no need to have any separate place for them.

Hi, If you want to create reports for QSOs that have been confirmed by LoTW first do a log search using a key of != for the "LoTW Rcvd" field and then choose the "Currently selected log entries" option from the report dialog box.

You can also generate reports for QSOs that have only be confirmed by LoTW and not by a QSL card by using a key of != for the "LoTW Rcvd" and a key of = for the "QSL Rcvd" field.

3460. Tempoarary Hack for Southern Sudan

Yahoo group: XMLog
Date: 2011-09-04 18:23:19 UTC
From: w1ect
Topic: 3460 Message: 3460

Since the ITU has yet to assign a prefix block for Southern Sudan I've created a version of XMLog that defines a temporary Main Preix/Country ID of "QQ" for Southern Sudan. This version is available at www.xmlog.com/beta

Any QSOs with ST0R will be automatically updated to this prefix which will allow DXCC tracking for this new country.

When the ITU assigns a prefix block I'll make another XMLog version available that will convert any "QQ" entries to the ITU prefix.

Mike-

I ran across this free callbook (www.hamqth.com) that was developed
when QRZ.com started charging for logging programs to lookup data.
It's now got data for 1,310,456 callsigns in it!

The author has developed a simple XML interface for developers to
query for data (http://www.hamqth.com/developers.php).

I thought that maybe you might be interested in supporting this method
as a free way to get logbook data?

Thank!

Hi David, "Ctrl+F" should do the job. You can make this automatic by choosing the "Edit/Edit Defaults For New Entries" menu item and setting the "Get Info From Callbook" option. Then you can control the action by setting/un-setting the "Edit/Use Defaults For New Entries" menu item option (the menu item line will include a checkmark when enabled).

2 questions...
(1) I forgot how to create a 'node' file whereas one can hit F5 and quickly recover from a telnet dropout. Can somebody pse step me through this?
(2) My 'keep-alive' does not seem to work...any help or suggestions?

Hi Steve, Here's what I use for K1EA

```
rem
rem Internet DXSpider PacketCluster at K1EA
rem
connect dxc.k1ea.com 7300
match login:
send #me
match de K1EA
send set/page 0
send sh/fdx/25
```

Check the documentation for node files for more info.

You can play with the "keep-alive" function using the "Options/Packet Options and Port Selection" menu. Different cluster nodes have different requirements so let us know what kind of problem you have with a specific node.

Tks Mike;
It's not the format of the node file that I need Mike, it's how to create the file and the process to use (naming and saving) it after creating that has me stumped. I now have xmlog running on 2 PCs in the house. I've done this in order to trouble-shoot and gather data because of a cable drop-out problem I have with ISP that is causing way too many drop-outs which causes telnet to stop. I set the node file up on this PC a long time ago when I first got xmlog and cannot remember how to do it. I think I used notepad (I'm running XP) and saved using 'save as' naming the file k3lr.nod and saved that into mlog folder. That worked ok on this pc but when I attempt to do the same on the 2nd PC even though I saved it in mlog as w9zrx.nod, mlog treats it like it's a text file instead of a *.nod file and I get an error box that says cannot find w9zrx.nod. Any clues as to what I'm doing wrong on that 2nd PC? As far as the keep alive I use "show/wwv/1" on the main PC and that doesn't seem to work. I'm going to try a blank line and see if that does the trick. Any ideas?

Hi Steve, Node files are just simple text files so you can use a text editor like NotePad or WordPad to create them. Save the file in your XMLog install folder and save it with an extension of .nod and you should see it included in the list displayed when you do an F5 (Connect/Start Node File) from the Packet Window.

Mike,

Thanks. That did it. I was looking for a simple (easy to use) logging program, and this looks like it will do all that I will need. I am using an older rig without any computer control, so some of the features are not needed, but that does not detract from its overall utility.

It also runs very well on Vista, and I cannot say that about many other programs.

Thank's again.

Yup...Mike; that is exactly what I have done. In fact, I tried to duplicate the set-up on this PC on the 2nd PC in order to help local ISP Cox Cable trouble-shoot a cable problem they are having. I even used the same exact wee prog I wrote in NotePad for this PC on the 2nd PC 'cept I changed the node to sync with the 2nd (different) telnet node I was using there...weird... You know Mike, how in mlog folder it calls the *.nod files NOD files...well on the 2nd PC even though its identical to what I have here on this is PC, the mlog folder calls the *.nod file a text file...not NOD! must be Murphy agn...

Steve,

Log into the router and look for any commands to check for upgrades (there should be something in your manual). Most routers will go to the company's web site and check for upgrades. My Netgear found the upgrade and asked if I wanted to install it. I said yes and it downloaded the file and upgraded itself. If all else fails call their tech support. This is worth a try as it fixed my problem.

There could be more activity on your internet connection in the evenings. I was getting disconnects several times per hour which stated right after I got a new router.

Subject: RE: [XMLog] Re: help pse

I was having a lot of disconnects also (I am using DSL) and I finally traced
it to my broad band router. I upgraded the firmware in the router and the
problem went away. The notes for the firmware upgrade said that there was a
fix for online gaming disconnects. It seems like the gamers have the same
problem.

My router is Netgear N600. You might check to see if there are upgrades for
yours. The Netgear's ask if you want to check for upgrades when you log
into it.

Yup...Mike; that is exactly what I have done. In fact, I tried to duplicate
the set-up on this PC on the 2nd PC in order to help local ISP Cox Cable
trouble-shoot a cable problem they are having. I even used the same exact
wee prog I wrote in NotePad for this PC on the 2nd PC 'cept I changed the

node to sync with the 2nd (different) telnet node I was using
there...weird... You know Mike, how in mlog folder it calls the *.nod files
NOD files...well on the 2nd PC even though its identical to what I have here
on this is PC, the mlog folder calls the *.nod file a text file...not NOD!
must be Murphy agn...

Hi Steve, Node files are just simple text files so you can use a text editor
like NotePad or WordPad to create them. Save the file in your XMLog install
folder and save it with an extension of .nod and you should see it included
in the list displayed when you do an F5 (Connect/Start Node File) from the
Packet Window.

Steve,

Log into the router and look for any commands to check for upgrades (there should be something in your manual). Most routers will go to the company's web site and check for upgrades. My Netgear found the upgrade and asked if I wanted to install it. I said yes and it downloaded the file and upgraded itself. If all else fails call their tech support. This is worth a try as it fixed my problem.

There could be more activity on your internet connection in the evenings. I was getting disconnects several times per hour which stated right after I got a new router.

3485. DXCC submission

Yahoo group: XMLog
Date: 2011-10-11 01:09:50 UTC
From: Ken Anderson, N0AS
Topic: 3485 Message: 3485

I'm trying to generate a submission report for new/band countries that are confirmed ONLY by card. That is, there is no LOTW confirmation. So far, no luck.

I'll be making a combined LOTW and card DXCC submission and want to avoid duplicates.

How do I get a "card only" submission report in mlog?

Thanks!

Have you tried doing a sort on the card received date field then a dxcc report? Of course, this field must be accurate to work. If you want only contacts with the LOTW field empty do a sort with the card field date more than your start date and only an equal sign in the LOTW field.

Got it! Thanks Willis and Benny!

Create a subset using "= " in the LOTW received field and "!= " in the QSL received field.

I wasn't thinking of creating a subset. DUH! I was stuck on the report options screen and trying to do something there.

Thanks!!!

3488. Winusb use in XMLog

Yahoo group: XMLog
Date: 2011-10-11 00:37:50 UTC
From: partrickjerry
Topic: 3488 Message: 3488

I am not very computer literate and some months ago, built the Winusb kit. It seems to work fine in CW but I can't seem to retrieve the Callsign or Frequency when I add a contact and I must do that by hand. I can retreive the time and date by double clicking.

Where must I go from here to learn how to retrieve the Call Sign and Frequency from my Kenwood 940s?

Any help would be much appreciated. Thanks, Jerry, KB4FP

From: WILLIS COOKE
Topic: 3488 Message: 3489

On the log screen select Options then the first option on the pull down. This will allow you to have the time and frequency automatically inserted. This is an XMlog function and has nothing to do with Winusb, but requires a serial connection to your transceiver and a transceiver that offers this capability. You can also tune a frequency by clicking on the Telnet screen when you are connected to a cluster. The Winusb will accept an ASCII message from XMlog and translate it into Morse for you and key your transceiver. I am not sure what is required for your 940, but I know you need an outboard serial port for the TS-850S. You may be trying to get functions that will require that you purchase a more modern transceiver. The 940 is almost an antique as is the TS-850. I did purchase the serial add on for the TS-850 and it worked fine with my DOS computer, but I have not been able to sort out the power supplies and cables lately. I purchased a K3 an it works well with the K3.

Transceivers are getting to be like computers. If you want all the modern functions you need new equipment about every five years.

I realize that this message sounds pretty rude, but I don't know how else to state the essentials briefly. I appologize if it is offensive to you. Good luck and 73.

Not at all abrasive but rather very helpful, clear and appreciated. As I said... I'm old...like my equipment... old also. Thank you. Don't know how I made it to advanced class.... Hope the FCC doesn't read this... they may downgrade me to novice again.

I would like to know if anyone with a ts940s has any experience with this? Thanks, Jerry, KB4FP

Topic: 3488 Message: 3491

Hi Jerry, Many older radios didn't include computer control (CAT) as a standard feature and an option had to be installed to support it. I did a bit of checking on the web and it seems the TS-940 falls into this category and requires an optional IF-10B board to be installed. It may be a challenge to find one of these or find someone who makes an equivalent replacement. Once the feature was installed you had to buy an external interface box (an IF-232C) that went between the rig and a serial (COM) port on your PC. Fortunately several companies provide replacements for these devices and they connect to USB ports on your PC rather than serial ports. Here's one I found on eBay but I know there are other companies out there that make equivalents (may someone out there has had experience with another brand):

http://www.ebay.com/itm/6-USB-CAT-cable-Kenwood-TS-440s-TS-940s-TS-850-TS-950-/310346743670?pt=LH_DefaultDomain_2&hash=item48421b7f76

From: Craig Bradley
Topic: 3496 Message: 3496

Mike,

I used XMLog in the CQ WW this weekend, uploaded to ClubLog and ended up with the following errors. These prefixes appear to be in the prefixes file, any idea what might have happened? I am using 6.44.

I tried entering new Qs for these calls and XMLog identifies the country correctly in the blue bar at the top of the logging window and in the check QSO window but logs it as 'W' USA.

BTW, this is a great report that ClubLog generates!

73,
- Craig, AE6RR

Subject: Feedback on upload for AE6RR

Dear AE6RR,

While processing your ADIF file (AE6RR_30oct2011.adi) for Club Log, the following possible problems were detected. Your log may be correct, but if necessary you can resolve these problems and create a new ADIF. If you make changes, it's recommended that on your next upload you use the option to clear your existing log, to avoid leaving prior records in Club Log.

If you would like to discuss these problems, then please open a discussion on the reflector, or contact Alan 5B4AHJ who maintains the Club log exceptions list. You can disable these emails from the Settings page if you prefer.

Topic: 3496 Message: 3497

Hi Craig, If you look at those entries in the log you used to create the ADIF file are the countries correct?

If so you can open the ADIF file with WordPad or NotePad and find those entries. The US calls should have "<DXCC:3>291" (291=US). You can find listings for other country codes if you look around the web, e.g. http://www.hosenose.com/adif/adif.html

If the log entry is correct and the ADIF DXCC value is correct I don't think the problem is with XMLog.

Hi Mike,

The ADIF file does contain DXCC:3>291 but it agrees with the data in the Log QSO window.

The log entries are wrong. If I start a new entry and type in the call WP2Z (or any of the other ones in my email) I see "WP2Z (Virgin Is...) at the top of the logging window and DXCC: Virgin Is in the check call window. When I click "Add" the logging fields get filled in with the County (Morris), State (NJ) and Country (W). This call has a QSL address in Morristown, NJ which is also appearing in the Address block after the QRZ.com lookup.

If I enter the call WP2ZZ (which is not in QRZ.com), it is logged correctly as KP2 - Virgin Is.

ZP8T is getting logged as in the state of MI and MI appears in the 3rd line of the QRZ address.

AY5F gets logged as in the state of CA and SF appears in the address line 3.

If I turn off the QRZ.com lookup and enter AY5F, I get the Verify Country guess popup window selecting Argentina, if I accept this guess it gets logged OK. Same with the other calls.

Somehow the QRZ.com address appears to be getting used for selecting the country if the program thinks that it needs to guess the country?

I have upgraded to version 6.47 with the same results.

73,

- Craig

Hi Craig, If you look at those entries in the log you used to create the ADIF file are the countries correct?

If so you can open the ADIF file with WordPad or NotePad and find those entries. The US calls should have "<DXCC:3>291" (291=US). You can find listings for other country codes if you look around the web, e.g. http://www.hosenose.com/adif/adif.html

If the log entry is correct and the ADIF DXCC value is correct I don't think the problem is with XMLog.

OK Craig - You must have "Use Defaults for New Entries" enabled along with having the "Get Info from Callbook" option set. In this case XMLog uses the callbook info as the primary source for the location. The idea was that the info in the callbook database was always going to be more accurate than any of XMLog's "prefix guessing" techniques.

It seems that lately a lot of DXPedtions are putting the sponsor QTH (or whatever) in QRZ.COM instead of the actual location of the DX station. I don't think there's much I can do to change things - that is, XMLog can't know when QRZ.COM gives an accurate location for the DX station info and when it does not.

Hi Mike,

Yes, I have "Use Defaults for New Entries" and "Get Info from callbook" in the Set Values for fields set. I have always had those options set. Would it be possible to use the callbook values for Name, Address, County, State/Province, etc. but not for Country or maybe another check box for use Get Country from Callbook? Or even pop up the Country Guess window if there is a conflict?

I would never expect a ZP or an AY to be in the US unless signing /W.

I have seen quite a few stations putting the QSL manager address in QRZ.com lately.

Speaking of the Set Default Value window, a field to set the default "Test Out" field would be nice for casual contest operation. Of course some people might want an incrementing serial number too but for a contest like the CQ WW, I would be happy with "5903"

73,

- Craig

3506. Partial calls check?

Yahoo group: XMLog
Date: 2011-11-12 19:51:27 UTC
From: cbahr
Topic: 3506 Message: 3506

Is there a way to do a poor man's partial call check in XMLog? It doesn't look like it can import Master.dta from WA1Z, and only does call searches on the current log (yes?). I was thinking perhaps one could load a big honking contest log(s) from somewhere and use that. I guess the problem then is how to separate your own Qs as they are recorded.

I sometimes get pile-ups here in TI-land and it would be really nice to get some help on pulling out the call signs this way. I like XMLog because I've used it before and it has enough features. I'm considering moving to N1MM Logger however for the partials check feature.

TIA es 73,

Casey, TI2/NA7U

From: w1ect
Topic: 3506 Message: 3507

Hi Casey,

Sorry, no partial check calls feature. The closest thing would be to do a search with a wildcard like =w1a* to find all calls starting W1A but this wouldn't do what you want - it would only find calls you've already logged.

For contests I use N1MM or WriteLog and then import the resulting QSO's into XMLog - not really appropriate for handling day-to-day pileups...

Sorry, Mike - W1ECT

3508. LoTW DXCC submissions

Yahoo group: XMLog
Date: 2011-11-15 17:01:17 UTC
From: Craig Bradley
Topic: 3508 Message: 3508

Mike,

I am preparing to do a combined LoTW and paper cards submission for a mixed endorsement, 15m and CW DXCC. I would like to use as many LoTW QSLs as possible to minimize the number of cards to be checked.

I would like to produce a submission report that uses the LoTW QSLs first then the cards. The submission reports don't indicate which QSLs are LoTW. I could do a report on all then filter on LoTW only QSLs then do a report and go mark up the other one but there must be an easier way to do this. My goal is to get a report that only lists the cards that I need to find and get checked.

Thanks & 73,

- Craig, AE6RR

[Non-text portions of this message have been removed]

3509. RE: [XMLog] LoTW DXCC submissions

From: Craig Bradley
Topic: 3508 Message: 3509

One other comment. If I do a report for Mixed, CW and 15M I have duplicate calls listed in the 3 sections of the report. For example if I have a QSL for 15M CW and it is a new country, it will be listed on all 3 reports.

When I go to the card checker, he should only have to look at that card once.

Any ideas?

73,

- Craig

From: w1ect
Topic: 3512 Message: 3516

Hi Wayne, Normally XMLog will use the callsign to "guess" the country/prefix but the guess will be replaced by the callbook info if you have the "Use Defaults for New Entries" option enabled along with "Get Info from Callbook" option.

XMLog will use the callbook info for any location details (address, country, grid, ...).

I considered making XMLog's "guess" override the country in the callbook info but that would lead to other problems. For instance if the country in the callbook info does not match the "guess" should the grid/state/county info be discarded, etc.

Personally my "fix" to the problem is not to use the "Get Info From Callbook" option but this won't be appealing if you like having state county and grid info filled in for awards tracking.

Mike,

Since this problem is rare (but difficult to locate when it occurs), how about letting XMLog 'guess' the country from callsign and then pop up a warning message if the guess and callbook don't agree? Or, forget the warning, use the callsign data for country, flag the file and add a 'verification report' which would find all flagged files for manual editing. As a DXer, country is most important, but I suppose that is not the case for all. Just a thought off the top of my head as an out of date programmer. :)

Hi Bob, In the past Kenwood has not changed and of the basic functions for rig control but it's possible something has changed for the 950, I'll check any online documentation to be sure.

The only difference that XMLog's various Kenwood selections affect are the baud rate. Check to see if the baud rate (etc.) settings for XMLog match the settings for your 950. There was a time when Kenwood radios had fixed baud rate settings but nowdays they can be selected from menus.

Hi Bob,

Try using the generic Kenwood interface choice, not the 570. That is what I use here on my 590 and it works with either RS-232 of USB. It does work better on the USB if you stay at 9600 baud.

Good luck and very 73.

Kevin :)

Subject: [XMLog] Interface to Kenwood TS-590

I kindly request help from anyone in the group on interfacing XMLog with my Kenwood TS-590. After I request frequency or mode data from the transceiver, I receive the response,"too short received 3 expected 38." I am using the XMLog to interface with the TS 570 since there is no option for the TS-590. I am using 9600 for the com port baud rate on each end. I am using the usb connection with the Silicon Labs driver. My computer does not have a serial port input. The TS-590 interfaces beautifully with the computer when using the Kenwood ARCP-590 virtual front panel control program. Any hints or help from the group would be greatly appreciated.
73, Bob, W6CYX

Provided by BARF80.ORG (Cleveland, Ohio)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AB5K & the AR TelNet Clusters Network ARRL Awards Blog and K3LP for the following DX information.

DXCC NEWS (DXCC and Russian Prefix Information). The following is from the ARRL Awards Blog Page at: http://www.arrl.org/awards-blog
"The DXCC Desk Clarifies Russian Prefixes Which Count for European Russia
--
For the purposes of the DXCC and WAC awards, the following Russian prefixes count as European Russia:

Any call with the prefixes UA through UI and the numbers 1, 2, 3, 4, 5, 6, 7.

Any call with the prefix U and the numbers 1, 2, 3, 4, 5, 6, 7.

Any call with the prefixes RA through RZ and the numbers 1, 2, 3, 4, 5, 6, 7.

Any call with the prefix R and the numbers 1, 2, 3, 4, 5, 6, 7.

Exception:

Prefixes R, U, UA-UI, and RA-RZ, the number 2, and suffixes beginning with F or K, count as Kaliningrad. Also, some legacy calls such as UA2CZ are in Kaliningrad.

And from 1 December, 2011 forward, any QSO (with any date) with stations using the following prefixes, count for European Russia:

Any call with the prefixes UA through UI, or the prefix U, and the numbers 8, and 9, followed by a suffix beginning with the letters F, G, or X (Perm and Komi).

Any call with the prefixes RA through RZ, or the prefix R, and the numbers 8, and 9, followed by a suffix beginning with the letters F, G, or X (Perm and Komi).

Since Russia joined CEPT, there are stations active with call signs that do not indicate DXCC entity, such as RA/N6TR who operated from Asiatic Russia, and RA/SM6LRR who operates from European Russia. These types of portable call signs will be managed individually in the DXCC system."

ET3, ETHIOPIA (ET3AA Youth Development Project; DX-Pedition 2011).
Dave Collingham, K3LP, sent the following press release to OPDX on December 8th (edited):
"Good Evening DXers:
Our Team, David (K3LP - Team Leader), Paul (N6PSE), Al (K3VN) and Bill (N2WB) arrived at the Addis Ababa, Ethiopia International airport this morning at 7:30 AM, Thursday, December 8, 2011. Our amplifier, 1,000 feet of coax, power meters, 160 and 80 meter antennas and other items were all held in Customs until about 1:30 PM. After paying the required 65% tax fees for electronic equipment and providing a letter from the university, we now have all the equipment in hand.
Paul (N6PSE), Al (K3VN) and Bill (N2WB) arrived at Sid's home, had dinner and headed for bed. They plan to get up early and be on the air around 3:00 AM local time on Friday, December 9th.
I was able to set-up a laptop PC, CW Keyer and other equipment at the ET3AA university station and made about 50 QSOs on 10 meters CW about 1.5 hrs before local sunset. There was a nice opening to EU and NA at the same time. Stations were being heard and worked from W5, W8, W4, W3, W2 and W1 areas. I QRTed after a brief exchange of QSOs in order to complete more enhancements to the station.
On Friday, I plan is to install the 160 meter and 80 meter vertical antennas with the students. In addition, if time permits, we complete a 10 Meter 6 element Vee Beam at 70' that could be used during the 10 meter contest. We will have both the ET3SID and ET3AA stations on for the 10 meter contest.
I'll (K3LP) be on 160 meters Friday at Sunset thru Sunrise, 1.823 MHz for JA and 1.835 MHz. I'll be using the 500w solid-state amp. Depending on the activity, I may bounced to 80 meters CW for a few minutes. We were not able to get a large amp into the country during this time.

We'll see everyone on the band tomorrow.

Take care,
David -K3LP"

Hi Charley:

Have you tried putting the whole Mlog file on a flash drive and taking it to another site which has a better printer? You could print from the program on the flash drive and not install the program into the machine at work. Are you using the Avery 4013 labels or generic equivalent? They can be set up to print 11 at a time. (I use an HP 1000 that I bought at Wal-Mart for $29.00 and it prints straight using these labels. No bells and whistles but it does a nice job of printing and that's all it does.)

Would be curious to see how you do. It is an unfortunate, but interesting problem.

BTW: Am completely sold on Mlog. I have over 27000 Qs in LoTW and Mlog works perfect in real time. I have been using it for 11 years in DX contests and love it.

3539. HamQTH.COM Support

Yahoo group: XMLog
Date: 2012-01-19 21:38:05 UTC
From: w1ect
Topic: 3539 Message: 3539

Hi, I've just posted version 6.49 at www.xmlog.com/beta which supports callbook lookups via HamQTH.COM at no cost. The data provided by HamQTH doesn't tend to be as complete as what is provided by QRZ.COM or have info for current dx-peditions, etc. However, if this isn't a problem for you and you find $30/year for QRZ.COM excessive then give it a try.

I've also found a few bugs and reported them to the owner of HamQTH. If you find any problems, post them here. Please don't include problems with individual entries (incomplete, out-of-date, mis-spelled, etc.). What I'm looking for is more generic problems reflecting problems in the data organization or lookups. For example, I've reported a couple of problems for lookups of U.S. possessions (Puerto Rico, Guam, ...)

- The country returned in the address is "Puerto Rico" or "Guam"
rather than "United States".

- The city also gets returned as the county.

Yahoo group: XMLog
Date: 2012-01-21 16:38:41 UTC
From: w1ect
Topic: 3540 Message: 3544

Hi Dave,

XMLog does not have a way to cofigure the set mode commands sent to your rig but there is a roundabout way that you can accomplish this.

XMLog supports a system called OmniRig that be used to access your rig. OmniRig is normally used when you need to share a rig between multiple applications but it does provide a way to change the commands sent to your rig. If you would like to experiment with OmniLog here's how:

- Open "Options/HF Rig Port Select" and open the Help page and check the documentation for OmniRig. If you're still interested go ahead and install OmniRig and get it running with XMLog.

- OmniRig has a file where it defines the commands used to set modes like FSK, etc. Check your OmniRig install folder - usually c:\Program Files (x86)\Afreet\OmniRig) - and you should find a folder named Rigs with a bunch of .ini files that define commands for various rig types. If you open the file for your rig you'll find it has a map of mode types -> commands.

- When XMLog builds its own commands to set "Data/FSK" mode it selects the "normal" versus the "reverse" FSK mode appropriate for the rig. However OmniLog doesn't provide a FSK-normal/reverse, just FSK-upper/lower. As a result when setting FSK mode via OmniLog XMLog always selects OmniMode's Digital/Upper (pmDIG_U) mode.

- That said, you can save a backup of the original FT-920.ini file and then hack the entry for pmDIG_U by replacing it with the pmSSB_U value (or whatever).

Mike - W1ECT

3545. Re: After update I lost my custom label

Yahoo group: XMLog
Date: 2012-01-21 16:45:47 UTC
From: w1ect
Topic: 3541 Message: 3545

Hi Buzz, The install should not have made any changes to your custom labels. These labels are saved in a file named Layouts.mdb (a Microsoft Access Database). If you have done any backups of your hard drive that include the XMLog install folder you can try restoring this file.

Before you try a restore you should double-check by choosing the "Options/QSL Labels Layout" menu item and checking the custom labels list.

If the label is not in the list and you have no backup I'm afraid that the label is lost.

Mike - W1ECT

Hi Mike,

I have reconstructed the custom label using the "small 4 QSO" label that is given in the program. I had to make some changes, but have it all good now. I have copied it and don't think I will have an problems in the future.

Since I have the master's attention, I have another question. I am sure it is easily figured out, but thus far I have been using the program mainly for printing labels for all the DX stations I assist. I am going to KG4 land sometime in the next 5 or 6 months and want to use the program for logging while running the pileups. Is there a way to input certain fields with data that will not change so that it does not have to be entered each QSO? For example, the Sent report is going to be 59 or 599 each time, the mode will be the same for long runs and so will the frequency. Can this be made "permanent" until I want to change them?

I figure it can, but have not messed with it yet to see.

By the way, I have convinced KG4AJ to use XMLog as his log program now.

Thanks for the reply and the very nice program.

73,

Buzz

3549. TX Prefix

Yahoo group: XMLog
Date: 2012-02-05 18:57:07 UTC
From: Kevin Nathan
Topic: 3549 Message: 3549

Hi All,

I am running version 6.41 and had something interesting happen today. I worked TX6T/P on 15 meters and when I went to log the contact it didn't show up with a country and I had to go to the list and choose FK/C for the Chesterfields. Yet, when I originally put in just TX in the callsign field, it came up in the title bar and showed the right country and heading.

Any idea what might be happening here? TX does not show up in my list of country prefixes either.

Thanks much and very 73.

Kevin :)

This is FO not FK/C ,isn't it?

Just checking. :) Either way it's a new one for me - but I thought that its an FO.

3553. Re: TX Prefix (Dxpeditions - TX6T, TX6T/p)

Yahoo group: XMLog
Date: 2012-02-06 16:48:15 UTC
From: w1ect
Topic: 3549 Message: 3553

Hi Ken, TX6T/p are the Pitcarin I. guys coming home and operating from French Polynesia (FO/P). They also used TX6T on the way out (also FO/P).

You can define both TX6T and TX6T/p as French Polynesia (FO/P) using the "View/Show Callsign List" menu item - this will handle any further entries or imports.

Hi Mike,

Couple of observations:
The password shows in plain text in the callbook setup. Might be a problem for some.

If you try to set up the callbook and mistakenly don't put in your call or password, the program crashes.

Otherwise, HOORAY!!!!!

Thanks,

Carl

3559. Re: [XMLog] HamQTH Comments?

Yahoo group: XMLog
Date: 2012-02-10 16:26:42 UTC
From: N7mal
Topic: 3554 Message: 3559

I think there is only one way to describe my experience installing the beta version:

'There is no joy in mudville the mighty Casey(W1ECT) has struck out'

Unfortunately I wasn't prepared to make notes. First my computer is WIN7 up-to-date(according to Microsoft).
The beta install replaced several files because it said they were 'out of date'.
I use a customized mouse pointer and it disappeared. I had to re-install it. That's no big deal but it happened.
The only thing I see from the callbook is the operator name. When I do the label thing the only thing that shows up is the operator name. If I go directly to QRZ I get all the info no problem.

I use VE7CC software for my connection to the i'net clusters. If I click on a call in VE7CC I get all the info from QRZ.

My plan, later today, is to install the beta on my 'XP' machine and take notes. Then I'll go to my XYLs computer and install the beta there. Her computer is exactly the same as my WIN7 machine.(they were both bought, same specs, the same day from Dell). I will take notes. I just made a quick check on the XP machine. It is ver 6.38 and when I do a callbook lookup it displays exactly the same thing as the new beta version.

The beta version functions properly as far as logging and the packet window, there are no problems.

Topic: 3554 Message: 3561

I am happy to report I finally have everything working.
First I installed the beta on my XP machine. It went 100% smoothly and works 100% smoothly. I setup the QTH lookup and it works perfectly. I can either just lookup a call for my own general info or with 1(one) click add the info to the log entry.

It is also now is working perfectly on my WIN7 machine but it took some work. there is another old saying: ""You have to be smarter than the problem"".
I tried reinstalling the program but it didn't work, I then tried reinstalling with the 'special' WIN7 visual basic plan. It still didn't work.
To make a long story short the install was not overwriting the mlog.exe file. I looked in the directory and all the files were there plus a new file, mlog(1). After I cleaned up the directory everything works perfectly now.
The only problem that still is there is the mouse pointer problem. The install changes my mouse pointer,,,on my machine. WIN7 is a special, very special, animal.
I hope this is all unique to my computer but with WIN7 anything could happen anywhere.

From: Robert
Topic: 3562 Message: 3562

I am trying to get XMLog to work with win7 64 and my FT950. It will work with HRD. Will XMLog work with Win7 64? If it does what are the settings?

3563. Re: Win7 64

Yahoo group: XMLog
Date: 2012-02-13 22:46:01 UTC
From: w1ect
Topic: 3562 Message: 3563

Hi Bob, XMLog works OK with the 64-bit version of Windows, that's what I'm using here.

If the FT-950 is one of those rigs that allow you to change the baud rate for your CAT connection the first thing to do is go to your rig's menus for the CAT port and make sure they match the settings found in the XMLog "Options/HF Rig Port Select" menu item. Picking the rig type of "Yaesu FT-950" just picks some default settings and then you can change these defaults to match the current setting found on the rig's menu.

If this isn't the problem we'll have to do some deeper checking...

From: Puck
Topic: 3565 Message: 3565

Due to a computer glitch which I've not been able to solve I cannot update XMLOG on my computer. The update file just will not run on it. I am using version 6.37 which works just fine but I need a current country file. Sice my version Southern Sudan became a DXCC entity and now R1MV has been dropped and is on the deleted list.

Can someone tell me which file I'd need to edit and how to do it to get my DXCC totals right. OR can some one send me that file only with the current data?

3567. Help Please with Log Fields

Yahoo group: XMLog
Date: 2012-02-26 17:37:48 UTC
From: Kevin Nathan
Topic: 3567 Message: 3567

Hi Mike and All,

I am totally blind and had XM set up exactly the way I want it. Then, this morning, I worked EI80IRTS which is the Irish Transmitter Society special call. It was a long address given in QRZ.com so I chose the button to place that address into the log entry. The only problem is that when I did this, now all entries come up with address fields available but my fields for name, notes, etc. disappeared--or at least they did to my speech screen reader.

Can someone please tell me what setting I need to change to get them back and get rid of all of the address fields that keep popping up with a new entry? Your help is ever so much appreciated.

Thanks a bunch and very 73.

Kevin :)

3569. County mismatches

Yahoo group: XMLog
Date: 2012-02-29 18:38:00 UTC
From: Ken Anderson, N0AS
Topic: 3569 Message: 3569

I have a couple of QSO records where the person has put their city in the county field for their LOTW submissions.

Xmlog flags this every time as an "invalid county," which it is, of course. And I have to "Appy" the LOTW data to the record every time I update xmlog.

Is there a way to set xmlog so that it no longer wants to "fix" these two QSO records each time?

Thanks!

Hi Ken: I am one of those baffling situations. Cities in Virginia are separate from counties. I don't know why. (They also have overlapping city/county school districts with two or more boards of education in a single county.) To keep LoTW and FCC simple I have listed myself as Rockingham County. Makes life simpler. If there is a rare situation where somebody needs a city I will make a special card and send it off to that op. I have only gotten one card, from a Japanese Op when I lived downstate in the county of Bedford, city of Bedford. He thought I was in Bedford City. Sent his $1 back with a card and an apology.

Yes, MLog can be frustrating but I love it anyway and find it works great for contesting.

The County Hunters Award team has a way of counting every location for a county. Virginia is not the only state that has some cities which are not legally in a county. St. Louis, Mo is one city that I know. I am not a county hunter, so I don't have these areas committed to memory, but if you look on ht County Hunter web site you can find a listing of which county these cities count for in the County Hunter Award. It has been a while since I looked at these, but as I recall it is not easy to find. Mostly it counts for the county that surrounds the city, but one that I remember is Virginia Beach does not have an obvious county. It would be nice if the County Hunters could make this a bit easier to find, maybe they have since I last looked. If you operate from one of these cities it would be convenient to know what county you are a credit for. Since most of the cities involved are large and in populated counties, I don't think any are rare.

I should have made my question more specific. I worked a Nevada gentleman. In his LOTW credentials he has "Carson City, NV" listed as the *county*. I don't care *why* he might have done this.

And I have several others with similar problems.

Now when I download and validate my LOTW confirmations, xmlog flags these each and every time ("not a valid county"). Then I have to go thru the process of individually applying (or not) the LOTW info to the xmlog county field.

What I am asking is: is there a way in xmlog to "mark" these QSO records so that I don't have to go thru this process each and every time?

> The County Hunters Award team has a way of counting every location for a county. Virginia is not the only state that has some cities which are not legally in a county. St. Louis, Mo is one city that I know. I am not a county hunter, so I don't have these areas committed to memory, but if you look on ht County Hunter web site you can find a listing of which county these cities count for in the County Hunter Award. It has been a while since I looked at these, but as I recall it is not easy to find. Mostly it counts for the county that surrounds the city, but one that I remember is Virginia Beach does not have an obvious

county. It would be nice if the County Hunters could make this a bit easier to find, maybe they have since I last looked. If you operate from one of these cities it would be convenient to know what county you are a credit for. Since most of the cities involved are large and in populated counties, I don't think any are rare.

> Hi Ken: I am one of those baffling situations. Cities in Virginia are separate from counties. I don't know why. (They also have overlapping city/county school districts with two or more boards of education in a single county.) To keep LoTW and FCC simple I have listed myself as Rockingham County. Makes life simpler. If there is a rare situation where somebody needs a city I will make a special card and send it off to that op. I have only gotten one card, from a Japanese Op when I lived downstate in the county of Bedford, city of Bedford. He thought I was in Bedford City. Sent his $1 back with a card and an apology.

3574. FW: new to the group intro KC9PXZ

Yahoo group: XMLog
Date: 2012-03-01 15:14:06 UTC
From: Jim Cameron
Topic: 3574 Message: 3574

Hello group,

I just found this group so I thought I would join. XMlog was reamened to my by Handi Ham. So I am hoping it works out from. Well a little about me. My name is Jimmy; I live in Wisconsin I got my ticket in 2009 then in 2010 upgraded to general. I am hoping to up grade to Extra before June. I enjoy working the Birds, ARES/RACES, rag chewing on the local repeaters and skywarn/weather. spotting. I just started getting on HF in Oct. For UHF/VHF I run, an I-COM IC28H feed with RG8 to a Diamond 510 dual band antenna at 50 ft. For UHF I run a Realm SLU-40 6 channel. I also own the Realm SLV-25 2 meter. As I said, just getting my feet wet with HF. I run a Kenwood 440s witch is an awesome radio. Feed with RG-213 to a Radio Wavz 80 meter DX OCFD at about 50 feet. My first rig was a HTX 202 That I still have. Works great. I am not sure how I feel about contesting yet. I do know that I am a lot less mic shy on a contest weekend. I am a member of handihams. My being in a wheelchair HTs. work best mobile or if I am around town. I drive with hand controls so only work mobile when the XYL or my daughter is driving. I think I may set up an echo link node to be able to check into handiham nets and the like on echo link using my HT. I have a wire interface and it worked great and the simplex node was temperately set up a while ago. I just got sick of unplugging it if I wanted to use phone on a local repeater. So I need o look into something that will allow me to switch from my wire interface when using the node to using the rigs mic when I want to work phone on one of the local repeaters. I think I may enjoy traffic handling but for now working on getting my WAS. I found WAS nets? On the internet, I will have to look more into that.
Well just wanted to post a short intro and tell the group a little about myself & what I enjoy about ham radio.

Hi Puck, Not sure which file you are referring to, the Prefixes file? If you do an install of the current beta at www.xmlog.com/beta this file will be re-installed. It includes the new Southern Sudan prefix (Z8) but hasn't moved MV Island to "deleted" status yet (this is on the todo list).

Hi Kevin, You should first check the settings of the a couple of Log Window menu items - "Edit/Use Defaults For New Entries" to see if you have defaults turned on and "Edit/Edit Defaults For New Entries" to make sure you have the defaults set up to correspond to your needs.

Hi Ken, Sorry but there's no way to ignore certain entries/fields on LoTW data being imported. If there's a couple of annoying entries that you see on every import you could always open the LoTW file with a simple text editor like NotePad or WordPad and delete the offending fields (or the complete entries). No doubt a macro could be created to automate this...

Kevin,
Once in a while I think I had the same problem. Since I am also blind I had my XYL look at the screen. If I remember correctly, there were some buttons in the bottom left of screen she clicked and things went back to the way it was.
I am using JAWS and could not get the buttons read. Other than the buttons XMLOG is handled by JAWS and is very blind friendly.

Mike,

Is there any way to import a log file from LoTW into XMLog?

A friend of mine has had his DXCC record transferred to LoTW and would like to download it. I tried creating a new log file in XMLog with no QSOs in it and then did a LoTW download/validate. When I tried to Apply LoTW data to the log it said that none of them were in the log (I expected than) but it didn't apply any of them. I tried to import the file but it complained that is was a LoTW file.

Is there any way to do this with XMLog?

Hi Craig, You can import the LoTW file as an ADIF file but to do this you need a hack first. Normally XMLog detects the LoTW flavor of this ADIF file and assumes you are making a mistake and won't let you proceed. ADIF files are just simple text files so you can open the file with NotePad or WordPad and check out the header. Temporarily change the PROGRAMID from LoTW to XXXX and do the import and then re-edit the LoTW file and restore the PROGRAMID to LoTW. Perhaps I should add a "Go ahead and import anyway" option?

Mike,

Has there been any indication from the LOTW and DXCC crews if they ever intend to include a download of "accepted" QSLs.

Sure would be nice to download that instead of manually going thru 100+ submitted QSLs to apply the credit.

Craig, I'm not Mike and maybe he has a better answer, but the download/validate routine just downloads the confirmed QSOs and enters the QSL data into XMLog. You need to download an ADIF file from LOTW using the LOTW utility and then import the ADIF file into XMLog. You can't do a one step download.

Hi Ken, The closest thing is a couple of lists that you can produce from the ARRL web site that are similar to the XMLog "DXCC Totals" and "DXCC Checklist" reports. To get the totals log on to:

https://p1k.arrl.org/lotwuser/awardaccount

and click on "View Award Credit Matrix" to get the checklist.

I've tried creating a feature to compare the XMLog checklist with the ARRL credit matrix but it's not ready for prime time. I can remember several times comparing the two lists by hand after making DXCC submissions, not a very pleasant task.

Hi Mike,

Thanks that worked very well - easy hack.

Yes, an option would be a nice feature if that is easy to do. It would be handy for people just starting out with computer logging or for some who lost their log file in a computer crash.

73,

- Craig, AE6RR

Subject: [XMLog] Re: Importing a log file from LoTW to XMLog

Hi Craig, You can import the LoTW file as an ADIF file but to do this you need a hack first. Normally XMLog detects the LoTW flavor of this ADIF file and assumes you are making a mistake and won't let you proceed. ADIF files are just simple text files so you can open the file with NotePad or WordPad and check out the header. Temporarily change the PROGRAMID from LoTW to XXXX and do the import and then re-edit the LoTW file and restore the PROGRAMID to LoTW. Perhaps I should add a "Go ahead and import anyway" option?

Mike - W1ECT

Hi Cookie,

I downloaded the file from LoTW by selecting “Import/Export” on the XMLog menu bar. Then selected “Download/Validate LoTW Data” and selected “Download all records”, this downloads the whole LoTW QSO file to your disk. Then I did the “hack” that Mike described and imported the file using Import/Export – Import ADIF file. Worked great.

Craig, I'm not Mike and maybe he has a better answer, but the download/validate routine just downloads the confirmed QSOs and enters the QSL data into XMLog. You need to download an ADIF file from LOTW using the LOTW utility and then import the ADIF file into XMLog. You can't do a one step download.

Mike,

Is there any way to import a log file from LoTW into XMLog?

A friend of mine has had his DXCC record transferred to LoTW and would like to download it. I tried creating a new log file in XMLog with no QSOs in it and then did a LoTW download/validate. When I tried to Apply LoTW data to the log it said that none of them were in the log (I expected than) but it didn't apply any of them. I tried to import the file but it complained that is was a LoTW file.

Is there any way to do this with XMLog?

I'm not sure Craig. I have only read about it and not found it, but look in LOTW, not in XMLog. I would start looking in the far right block where you check your uploads. I always keep adequate backups locally, so I have never needed to download my log after I have uploaded it. If you need more help, try the ARRL LOTW help utility and tell them exactly what you need. Of course, the log you download will be a subset of your uploaded log and contain only those fields that LOTW stores. Once you get the ADIF file, upload it with the XMLog utility.

Hi Cookie,

There is a “button” on the side bar in LoTW but it only downloads the confirmed ones. It would be good to have a way to download the whole log in an emergency and I have heard that some of the other logging programs can do this.

However in this case (I have not lost my log), I have a friend who has had his entire DXCC record transferred to LoTW and he would like to start with computer logging. As all of his QSOs in DXCC were confirmed by default, this file should be exactly what he needs.

Craig, I am not sure I remember everything. As I recall, the ARRL was saying that they could recover some logs if the need was dire, but that they would need to be involved and they did not want to encourage use of LOTW as a log backup. Since then the LOTW server has suffered from not enough bandwidth for the number of users and long delays in uploading after major DX contests. They may have abandoned the practice altogether because of excess usage. I don't think they ever had a hot button for a complete log dump. You can write ARRL and see what they will do for you, but don't expect an enthusiastic response.

Hi Cookie,

I really don’t need to download the entire log. In this case I am trying to help someone who has had his DXCC record transferred to LoTW upload that file. As the DXCC record is all confirmed QSOs, there should be no problem uploading that file with the current system.

There are no “lost logs” in this case.

Thanks & 73,

- Craig, AE6RR

Subject: [XMLog] Importing a log file from LoTW to XMLog

Mike,

Is there any way to import a log file from LoTW into XMLog?

A friend of mine has had his DXCC record transferred to LoTW and would like to download it. I tried creating a new log file in XMLog with no QSOs in it and then did a LoTW download/validate. When I tried to Apply LoTW data to the log it said that none of them were in the log (I expected than) but it didn't apply any of them. I tried to import the file but it complained that is was a LoTW file.

Is there any way to do this with XMLog?

73,

- Craig, AE6RR

3601. XMLog support for new DXCC online application?

Yahoo group: XMLog
Date: 2012-04-16 17:09:36 UTC
From: Craig Bradley
Topic: 3601 Message: 3601

Hi Mike,

The new online DXCC application process says that it will allow you to upload an ADIF file for a card submission. See paragraph 2 on this page:

https://p1k.arrl.org/onlinedxcc/

Do you plan to add a feature to XMLog to export a submission file?

Thanks & 73,

- Craig, AE6RR

Craig, I'm not clear on what you want to do. If you want a single download of all the data, I don't know if you can do that. But, you can go to Awards then select the account and then open DXCC. You will see a grid that shows the number of countries worked and number accepted for each type of DXCC (general, phone, cw, digital, 160 meters, etc.) If you click on the kind of DXCC it will give you a list of the pending credits. If you select show radio buttons for pending credits, all credits and all entities. Select the type of DXCC from the drop down list then select whether to sort by name or prefix, then click the Select DXCC to View and you will get the appropriate list of contacts. If you click on the call sign it will give you the details of the contact. If you want to see the contacts, you can go to the Your QSOs tab and it will allow you to list various sorts. You can print any of these lists, but if you can download them to ADIF I
am not sure how to do that.

Hi Cookie,

I really don’t need to download the entire log. In this case I am trying to help someone who has had his DXCC record transferred to LoTW upload that file. As the DXCC record is all confirmed QSOs, there should be no problem uploading that file with the current system.

There are no “lost logs” in this case.

Thanks & 73,

Craig, I am not sure I remember everything. As I recall, the ARRL was saying that they could recover some logs if the need was dire, but that they would need to be involved and they did not want to encourage use of LOTW as a log backup. Since then the LOTW server has suffered from not enough bandwidth for the number of users and long delays in uploading after major DX contests. They may have abandoned the practice altogether because of excess usage. I don't think they ever had a hot button for a complete log dump. You can write ARRL and see what they will do for you, but don't expect an enthusiastic response.

Hi Cookie,

There is a “button” on the side bar in LoTW but it only downloads the confirmed ones. It would be good to have a way to download the whole log in an emergency and I have heard that some of the other logging programs can do this.

However in this case (I have not lost my log), I have a friend who has had his entire DXCC record transferred to LoTW and he would like to start with computer logging. As all of his QSOs in DXCC were confirmed by default, this file should be exactly what he needs.

I'm not sure Craig. I have only read about it and not found it, but look in LOTW, not in XMLog. I would start looking in the far right block where you check your uploads. I always keep adequate backups locally, so I have never needed to download my log after I have uploaded it. If you need more help, try the ARRL LOTW help utility and tell them exactly what you need. Of course, the log you download will be a subset of your uploaded log and contain only those fields that LOTW stores. Once you get the ADIF file, upload it with the XMLog utility.

Hi Cookie,

I downloaded the file from LoTW by selecting “Import/Export” on the XMLog menu bar. Then selected “Download/Validate LoTW Data” and selected “Download all records”, this downloads the whole LoTW QSO file to your disk. Then I did the “hack” that Mike described and imported the file using Import/Export – Import ADIF file. Worked great.

Craig, I'm not Mike and maybe he has a better answer, but the download/validate routine just downloads the confirmed QSOs and enters the QSL data into XMLog. You need to download an ADIF file from LOTW using the LOTW utility and then import the ADIF file into XMLog. You can't do a one step download.

3603. RE: [XMLog] Importing a log file from LoTW to XMLog

Yahoo group: XMLog
Date: 2012-04-17 14:20:47 UTC
From: Craig Bradley
Topic: 3587 Message: 3603

Hi Cookie,

This is for someone who has never used computer logging. All of his QSOs are on paper logs and all of his QSLs have been paper cards checked by card checkers and then submitted to the DXCC desk for awards where the staff then keyed all of them into the computer.

You can request that the ARRL transfer your DXCC record (which contains all of your QSLs from checked cards) into LoTW and he has done this. So his LoTW file is entirely QSLs from the DXCC system. We want to download this into XMLog so he can get started in computer logging with all of his DXCC credits in XMLog. By downloading all of the LoTW confirmations using the feature already in XMLog we can get this file and then “hack it” per Mike’s instructions. As all of his records in LoTW are confirmed, we will get everything.

I have tried this and it works so the problem is solved.

Thanks & 73,

- Craig, AE6RR

Hi James, Are you referring to the "Packet Spots Map" window? If so you can click/hold/drag the lower left corner to resize this window. You can free some screen space by turning off bands that you don't want to see using the "View" menu item. Also try the "View" menu item to switch between "Horizontal" and "vertical" to see what fits best on your screen.

Click File/Open Log and open the log file in which you made the entries. You can also set a default log to open each time you start the program.

Never mind.

I found that by creating ADIF files from WITHIN XMLog,the LOTW and eQSL dates can be set (even if those files are not used for an upload).

Thanks.

Hi Craig, Currently the prefixes file is set up such that all 8J1 prefixes are considered to be in Antarctica and apparently this isn't correct. I'll change the prefixes file to remove 8J1 from Antarctica and then we'll have to make any 8J1 Antarctic callsigns exceptions by adding them to the "Callsign List". The current calls in this catagory would be 8J1RL and 8J1RF - if anyone has info on other 8J1 calls that have been used for Antarctic stations please let me know.

Thanks Mike.

I worked him first jus to make sure, then spotted him on the local repeater, at which point I was corrected (he is listed in Japan by QRZ.com).

Subject: [XMLog] Re: 8J1ITU in Antarctica?

Hi Craig, Currently the prefixes file is set up such that all 8J1 prefixes are considered to be in Antarctica and apparently this isn't correct. I'll change the prefixes file to remove 8J1 from Antarctica and then we'll have to make any 8J1 Antarctic callsigns exceptions by adding them to the "Callsign List". The current calls in this catagory would be 8J1RL and 8J1RF - if anyone has info on other 8J1 calls that have been used for Antarctic stations please let me know.

Subject: [XMLog] XMLog support for new DXCC online application?

Hi Mike,

The new online DXCC application process says that it will allow you to upload an ADIF file for a card submission. See paragraph 2 on this page:

https://p1k.arrl.org/onlinedxcc/

Do you plan to add a feature to XMLog to export a submission file?

Thanks & 73,

- Craig, AE6RR

Hi Craig, How about doing a "Awards/DXCC/DXCC Submission Tracking" and setting the "Reset Current Records To Those In Report" option. Then create an ADIF file from those records and do an on-line submission of that ADIF file?

This would not set the DXCC "Submitted" date so you would have to go through that record set and double-click on all the DXCC submit dates. If this technique proves useful I guess I could include a "Set DXCC Submitted Date" option along with all the other "Set XXX Date" options for ADIF exports.

Hi Mike,

This sounds like it would work unless the ARRL wants something special in the ADIF file. I don't have any submissions coming up for a while so I won't need it soon. I just thought that you might want to be thinking about this. It might be nice to have a check box when doing the submission forms to generate the ADIF file, that might solve the "DXCC submitted date" issue.

73,

- Craig, AE6RR

How is QRZ.com going to know the QTH? It already puts in the address of the home QTH. If the station is mobile or portable QRZ does not know that. You can always ask the operator if in doubt. Communication other than 599 is always allowed and often encouraged in ham radio!

Willis,

I didn't request a flip answer. I thought it would be nice to be able to set a default to use the QRZ City which could always be over written if different.

I suggest you keep your attitude to yourself!

David

Hi David, The QTH field dates back to (very) old versions of XMLog that did not have address fields. The callbook lookup doesn't bother to fill this field in since it's redundant to the address/state/county/... fields. Feel free to use it for any other location info.

Can't help you there but am curious. Does anybody know how many of us use MLog? I get into CW/RTTY contests and MLog does a nice job. I make a new log for each contest, change it to ADIF and upload it to LOTW. Then the log is transferred to the current log (in this case log 33). When I get about 1000-1200 contacts they are printed out as a text file and put in a 99 cent paper binder. All logs are also kept in MLog with backups. All logs back to 1970 (DX), 1999 (DX and stateside) are put into a master log. (Almost 29,000 contacts) I download LoTW contacts and keep them in a separate log called LoTW. It is much faster to hunt through the downloaded log than going to ARRL LoTW. Mike has done a superb job I think and MLog does everything I want from a logging program.

3638. mlog.exe violation problem

Yahoo group: XMLog
Date: 2012-08-06 16:33:18 UTC
From: Buzz
Topic: 3638 Message: 3638

Greetings,

Earlier this morning I had XMlog open and was looking at one of the logs I have there. I was actually looking at the page where all contacts are available to search.

All of a sudden the program closed and I noticed that the desktop icon had disappeared from my desktop. I have tried to open the program but each time I try to open it from my computer I get an error message saying mlog.exe is missing.

I renamed my mlog directory and tried to run the setup file for version 6.53. When I do that I get the error message on installation stating:

mlog.exe - access violation has occurred while copying file

I can't seem to get the program back and running-not a good situation for a QSL manager needing to print out labels for the 25 cards I have in today's mail.

Any help is greatly appreciated.

73,

Buzz

Buzz, since XMlog has no protection it sound to me like Windows security problem. Are you running the program from an administrator user privilege? Make a copy of the log files before you try too many things. Good luck and let us know how you fare.

Subject: [XMLog] Prefix file

I have just installed XMLog fresh on a new Win 7 system. Start fails with a message that the prefix file cannot be found? I loaded using the program load online. Have I missed something?

John / WA1JG

Yes, it can be. Either set up a directory such as c:\xmlog or c:\ham radio\xmlog and put your other ham radio programs in the c:\ham radio\[other ham radio programs] . This will help a lot in avoiding installation and upgrading problems.

3644. Re: bug report - 33cm incorrectly reported as 35cm in exported ADIF

Yahoo group: XMLog
Date: 2012-08-08 09:55:48 UTC
From: Bob Vaughan
Topic: 3445 Message: 3644

This bug does not appear to have been resolved, and it's been just over a year since I reported it.

I just downloaded and tested with 6.53, and it still exports 902Mhz as 35cm. eQSL and LOTW both reject 35cm as an invalid band.

Please fix.

The grid square should populate if you 'double-click' on the grid field.

The county does not, but you can select it if you know which county it is.

Topic: 3646 Message: 3649

Hi Bill,

I created a few log entries it seems to fill in the county and grid ok for new entries when "Edit/Use Defaults" is selected and "Edit/Set Defaults" has the "Get info from callbook" option set. However, I guess you're referring to existing entries.

There is no way to make a global change for all entries or for "currently selected" entries. Probably not a good idea since data for older entries is less likely to be current.

As Wayne noted you can update a existing entry's grid with a double-click but other fields like the county use double-clicks for list displays. However all fields that can be updated from the callbook include a "set xxx field from callbook" in the right-click popup menu.

I'm going to wait until prefixes are officially assigned by the ITU before I make a new version of XMLog available. The new version will take care of any QSOs in the log made with stations that are eligible for Kosovo DXCC credit.

Until then, WFWL (work first, worry later) and just live with the "?" that gets assigned for the country.

Hi Nelson, The older calls maintained in the "callsign list" are useful for folk who are creating their logs from scratch and entering old QSOs by hand. It can also be useful when doing ADIF imports from sources that have not associated DXCC countries with the log entries.

If you don't fall into either of these catagories you can do some wholesale trimming by editing the file "dxcalls.ini".

From: Benny Owens
Topic: 3683 Message: 3683

HI FOLKS

I LOADED LINUX AND GOT IT WORKING AND NOT FINDING A LOG PROGRAM AS POWERFUL AS XMLOG FOR LINUX, I ADDED CROSSOVER TO ALLOW WINDOWS PROGRAMS LIKE XMLOG TO RUN UNDER IT ON LINUX.

I HAVE XMLOG WORKING FAIRLY WELL THIS WAY. I HAVE A COUPLE OF ISSUES. I COPIED IN ALL FILES FROM MY WINDOWS VERSION TO THE LINUX VERSION.

1- ON XMLOG START UP I GET AN ERROR MESSAGE ABOUT LAYOUT.MDB. I ALSO HAD TO GO THRU ALL THE SETTING IN THE XMLOG LIKE COLORS, PACKET SETUP, RIG SETUP ETC.... BUT IT WORKS OK.

2- ON XMLOG PACKET START UP I GET AN ERROR MESSAGE ABOUT MY NOD FILE I USE. I USE F5 AND HIT ENTER AND THE TELNET WORKS FINE.

3- THE REAL PROBLEM IS THE RIG PORT GIVES AN ERROR MESSAGE ABOUT A INVALID COM PORT. I USED THE SAME SETTINGS THE WINDOWS XP VERSION. I TRIED ALL 16 COM PORTS WITHOUT IT WORKING WHEN I CLICK ON THE CALL SIGN ON THE SPOTS MAP OR USING CONTROL A TO START A NEW ENTRY. I GET THE ERROR MESSAGE WHEN CLICKING THE CALL SIGN ON THE PACKET OR SPOTS MAP SCREENS. ANY HELP ON THIS ONE IS REALLY NEEDED.

THANKS FOR READING AND 73

3685. TQ8 error file

Yahoo group: XMLog
Date: 2012-12-23 20:29:24 UTC
From: bobwarmke
Topic: 3685 Message: 3685

Hello Mike and others,
I have manually entered about 50 QSO’s from my paper log into XMLog. When I attach my TQ8 file for uploading to LOTW, I receive an error report which states that the error is “Invalid Band 0” in all of my entries. I had entered all frequencies in the frequency window as 5 digit numbers like 18070. I am sure I am missing something.
Please help me.
Merry Xmas and 73,
Bob, W6CYX

From: Ken Anderson, N0AS
Topic: 3685 Message: 3686

Bob,

I'm away from my computer - but I think that you need to enter the freq as 18.070 rather than 18070. That is, you need the decimal.

3688. XMLog 6.58 Alpha test

Yahoo group: XMLog
Date: 2012-12-27 19:16:13 UTC
From: w1ect
Topic: 3688 Message: 3688

The next version of XMLog has been updated to include all the Mode types defined in the latest ADIF specification. To support all these modes I've had to increase the size limit of the Mode field from 6 to 8 characters. Unfortunately this isn't a simple change because field sizes in the log file (a Microsoft Access database) can't be arbitrarily increased.

The changes seem to be working smoothly but I'd like to put it through a cycle of Alpha testing before making it more widely available as a Beta test version. If you'd like to install this version it's posted at:

www.xmlog.com/beta/xmlog658.zip

Please back up your log files before running this version.
Please back up your log files before running this version.

3689. OMNI VII Setup

Yahoo group: XMLog
Date: 2012-12-29 17:46:56 UTC
From: wb4ktf
Topic: 3689 Message: 3689

Hello and Happy New Year to everyone,
I have a TenTec OMNI VII and am trying to set it up so that xmlog can access the frequency and mode. I have a Tentec Serial to USB cable that I've plugged into my PC. I see that it exists as a Prolific USB on COMM Port 4. What do I do to set it up to work now? I ask for someone to advise me of the settings to use in xmlog option HF Rig Port Select. Do I need to enter in a "Rig Address" and if so what address do I use from the OMNI VII?
Thanks and 73s.

From: KA1ANW
Topic: 3693 Message: 3693

I attempted to set up xmlog with my FT450D,I got a message when I tried to add my frquency to the log by way of the FT450D. The message was:Rig Response for get freq/mode to short received 3, expected 27. Is there a member who can help me get the logging program and my radio working properly. I would most appreciate help with this problem. Thank you, KA1ANW

3694. Re: RIG CONTROL

Yahoo group: XMLog
Date: 2013-01-08 17:24:37 UTC
From: w1ect
Topic: 3693 Message: 3694

Hi, For the FT-450 XMLog sends a "IF;" command which should return a 27 character block of info that includes the frequency, mode, etc. The first thing to check are the FT-450 settings for the baud rate, etc. to make sure they agree with XMLog's "Options/Set Rig Port" settings. If these settings agree then there is a debug feature available that will let us display the info being sent/received.

3696. no matching entry lotw

Yahoo group: XMLog
Date: 2013-01-20 20:54:32 UTC
From: pa1cc
Topic: 3696 Message: 3696

I have a "no matchting entry" report for about 1.100 qso's which were downloaded from lotw. Obviously these qso's won't be flagged as "qsl received lotw" automatically. I have been searching through the adi. files to find some sort of mismatch but I can't find anything wrong: the adi download shows only good data matching the data in my log. And there shouldn't be a problem anyway because these "no matches" are confirmed by the lotw system. What could be the problem?

From: w1ect
Topic: 3696 Message: 3697

Hi Ton, You should check "Matching LoTW Records to Entries in Your Log" in the LoTW section of the help file (under "Importing and Exporting Log Entries"). As noted there the callsign, date, time, frequency and mode contained in the ADIF file from LoTW have to match an existing entry in your log file.

If it's not obvious why no matches are being found you can send a copy of your log and the LoTW/ADIF file (as attachments) to support@... and I'll check to see what's happening.

From: w1ect
Topic: 3702 Message: 3703

Hi John, No there isn't a way to get a list of unique calls. If you've had some experience programming you can create a file with all the entries and then scan that file counting unique calls.

1) Use "Display/Sort By" to set the sorting by callsign
2) Select all entries
3) Use "Display/Short" and select a filename for the destination

The resulting file will be a simple text file that can be read by just about anything.

3704. Deleting/editing a block of calls

Yahoo group: XMLog
Date: 2013-02-19 14:13:17 UTC
From: n5ftr@swbell.net
Topic: 3704 Message: 3704

Greetings,

I have imported a block of over 1000 entries into the log of one of the DX stations I assist. This is a contest log and he entered 599 1, 599 2, 599 3, etc. into the sent field. When I imported the file into the log the SENT and RECEIVE fields did not import(They are blank). Is it possible for me to edit the entire group to show a 599 report for all? I, of course, have edited individual calls before, but never had occasion to edit a group of 1000+.

Is it also possible to delete a large group of entries imported into a log by mistake? The calls are all in consecutive order and I can delete individual calls. I see a Delete Selected Entries under the Edit tab, but have not been able to mark a group of entries to delete more than one at a time.

Thank you for any assistance with these questions.

73,

Buzz
NI5DX

From: w1ect
Topic: 3704 Message: 3705

Hi Buzz, If there is something unique about the entries - a range of dates, etc. then you can use the Edit/Delete Selected Entries menu item. The best case would be if you used a seperate Station Info profile for these entries and then you'd be able to select using one of those fields. To get more info on using wildcards, date ranges, etc. as search keys check the Searching the Log and Wildcards sections of the help file. If you need more help in this area you can ask here or contact me at support@...

I'm not sure why the info wouldn't be imported correctly. You can send me a copy of the ADIF file to support@... and I'll take a look.

Yahoo group: XMLog
Date: 2013-02-28 19:05:24 UTC
From: k1jy
Topic: 3714 Message: 3714

Any advice on establishing multiple, discrete, station logs? By that I mean, one log, profile, configuration, etc. for an individual's call, and a separate log, profile, configuration, etc. for a club station call. None of the information in one log/profile/configuration ever needs to mix with, or should be confused with, the other. I am aware of creating additional logs and profiles, but in this case, even the LOTW log-in needs to be different. I don't want to ever corrupt data with the wrong profile or imported log data. Other than an additional XMLog installation in a separate directory, any suggestions?
Thanks,Lindsay, K1JY

Topic: 3714 Message: 3717

Hi Lindsay, As others have mentioned XMLog allows you to create more than one log file. Of course this means making sure you have the correct log file open when you make changes. More than once I've worked a new station, added it to my log, and then later noticed that I had actually added it to my "debugging" log file which is the one I have as my "default" log (the log automatically opened when XMLog starts).

XMLog provides "Station Profiles" that can be associated with log entries which can define an operator and station callsign. However the primary use for this feature is for folk like me who have moved around and have had different calls through the years. This allows selecting a sub-set of your full log based on location, operator callsign or station callsign (this info is part of the ADIF specification).

Thanks, Mike.

Yes, the create more than one log file as others mentioned, is more simplistic and error prone for this need than I was hoping for.

I was hoping to limit the possible errors to only selecting which log file was being used, by making sure the correct Station Profile (call sign/location/etc) was automatically selected for the log file selected, and that other setup parameters (such as LOTW account) were automatically selected and followed the log file. Since things like LOTW account information, QSL label formatting, etc. do not follow either the log, or the station profile, each would have to be manually selected and perhaps modified depending on the station one wants to log.

I guess not something one normally does or wishes for. A great program nevertheless. First time in years of use I think I've run in to something I really wanted to do that's not quite so easy.

73,
Lindsay

Hi John, I've found the documentation for the control commands on the TenTec site and I'll take a look. The best case is that it shares the command set with another TenTec rig and you will be able to control the 539 by selecting that rig type. Otherwise I'll have to add the rig-specific changes which usually isn't a problem.

I'll let you know...

3729. How to handle eQSL Data

Yahoo group: XMLog
Date: 2013-04-22 17:19:54 UTC
From: baamaster
Topic: 3729 Message: 3729

Folks

While recovering from surgery, I thought it a good chance to bring XMLog up to date with 35+ years of qsos. Well, I got everything loaded, except for 7 years of paper logs that I can't find, and scrubbed the data for the 6 moves during that period. I consider the log as clean as it's going to get and ready for uploading to LoTW and eQSL.

LoTW submission is covered in the docs, but the only comments on submitting to eQSL I can find in searching the messages are in the XMLog 6.00 LoTW Features document, and they seem to be contradictory.

As I understand it, to submit data from XMLog to eQSL you select a subset of your log and then create an ADIF file using the "Import/Export ADIF File" menu item. The resulting ADIF file is then submitted to eQSL manually.

The document continues

"When you create this ADIF file you can choose one of two new options: "Set LoTW Sent Field to Current Date" or "Set eQSL Sent Field to Current Date". Setting one of these two options will update the "LoTW Sent" (or "eQSL Sent") field for all log entries that were included in the ADIF file."

Implying that XMLog sets the "eQSL Sent" field.

But two paragraphs down in the document is the statement

"The "eQSL Sent" and "eQSL Rcvd" fields can only be set manually and ..... "

So, which is correct? Does the creation of the ADIF file set the "eQSL Sent" field, if you choose, or do you have to set it manually?

On the flip side, I understand that it's best to just set the "eQSL Rcvd" field manually.

Thanks for reading this long post.

Upload of eQSL can be done exactly as you say, ie produce an ADIF of
the selected QSOs and upload them to eQSL via their website.

But you can indeed only update the eQSL received field manually, making
it less usable.

What I have done is to set up a completly separate XMLog account,
eQSL.log, to just contain those QSOs that have been confirmed at eQSL.
You can either download your COMPLETE inbox using the button at the
bottom of the eQSL inbox pate, or use a program I have written to
convert those QSOs displayed in the inbox to an ADIF
(http://www.davesergeant.com/bbcbasic/eqsladif.zip). I have been using
this method for a long time and it works well.

LOTW of course is much more straightforward.

Hi Bill, I've looked through the current help file sources and I can't find the comment about the "eQSL Sent field can only be set manually". I guess you may be looking at an older version? The ADIF Export menu item does give you the option of setting the LoTW Sent or eQSL Sent date to the current date. The LoTW import has the option of setting the LoTW Rcvd field but there is no corresponding feature for the eQSL Rcvd field. If this is a problem I can look into adding this field to the fields that can be set using a "Edit/Change xxx For Multiple Entries" menu item.

Well the ADIF file I generate to import into XMLog has a field <EQSL_QSLRDATE:8>20130421 which when imported does indeed set the eQSL field. But it has to be in the ADIF file, not an option in the XMLog import options.

Hi Dave, I understand what your program does to hack the ADIF file to add the eQSL received dates. I'm adding a menu item that would allow you to hack in the date using XMLog itself. Basically if you can select a sub-set of the records you want to change you're in business. Normally this would mean selecting the records with a common eQSL "Sent" date (the date you supplied when you did the ADIF export) and then picking the "Edit/Change Dates For Multiple Records". While I was at it I made the menu item a general date changer (QSO date, LoTW/eQSL sent and received dates.

I'll post the changes in the beta test area in a few days.

Have you had success controlling your rig with software other than XMLog? This would rule out problems with cables and device drivers, etc.

If you are sure the connection between the rig and PC are ok the next thing to check are the XMLog rig settings. Many rigs allow you to select various values for the baud rate, etc. Be sure your XMLog values match the current settings for your rig.

Hi Bill, I've posted a beta version 6.61 at www.xmlog.com/beta This version allows you to set the eQSL received dates for multiple records. If you can isolate the records you want to update with a log search then the new "Edit/Change Date and Time for Multiple Entries" menu item may do what you need. Perhaps you set the eQSL sent dates to the same value - in this case you can do a log search on that field to isolate the records that need to be updated.

3740. LOTW change

Yahoo group: XMLog
Date: 2013-05-27 08:30:05 UTC
From: Dave Sergeant
Topic: 3740 Message: 3740

The downloaded adif file from the LOTW site (lotwreport.adi) used to contain the field LOTW_QSLRDATE which XMLog uses to fill the LoTW Rcvd field. I have just downloaded my latest one and it now instead uses <QSLRDATE> instead, which of course doesn't fill that field or even the QSL Recvd one. DO you have any information on this change, why it was done, and if anything can be done to cope with it. I always found it useful to import my latest confirmations then see what the new ones were by selecting LoTW Rcvd to cover the date range.

3742. XMLog and new Buckmaster HamCall DVD

Yahoo group: XMLog
Date: 2013-05-29 12:57:59 UTC
From: keefus65
Topic: 3742 Message: 3742

Greetings All!

I'm new to the forum but have been a consistent user of XMLog for the last few years. It's a great program and I've enjoyed using it very much.

However, I recently purchased Buckmaster's new "HamCall" DVD (vs. CD...the May 5, 2013 release) and am now consistently unable to set XMLog to read either directly from the DVD or from the downloaded program (and data files) on my hard drive.

My computer is a Pentium 4 running Windows XP with Service Pack 3. I've also tried interfacing XMLog and the new HamCall DVD with my Windows 8 laptop and have achieved the same non-result.

I'm running the latest version of XMLog (V 6.59...and even tried the new Beta version) both the same result. I've also insured that all of the called for data files are in my "C:\Ham0" folder (i.e. countrys. HAMCALL. IDX, HAMCALL.DAT) as per your help menu. therein.

What's more, when I try to switch the Callbook destination location in XMLog to anything other than a root directory (i.e. C:, F:, or some such) I get an error message that says that I can only set that parameter to a root directory. This is DESPITE the instructions in the help file that say I should set that parameter to C:\HAM0 (i.e. where that laundry list of apparently needed data files resides).

My hunch is that Buckmaster's switch from a CD file format to a DVD format (and perhaps adding much more data to the data file) may have now upset the internal pointers to this info in the XMLog program..

Another confusing twist is that tbe new HamCall DVD runs just fine on its own using its built-in program. That is, it finds all the call sign data as it should. What's more, I am also able to run last year's version (May 2012) of the HamCall CD with XMLog and all appears to work normally.

So, again, something appears to be amiss in the interface between XMLog and the new Buckmaster Hamcall DVD.

Any help in resolving this issue would be greatly appreciated.

Hi Jim,

I have a ton of logs in my database for XMLog, so when I click Create New Log I get a blank field in which I can type NI5DX or whatever name I want on the file.

If your field shows Demo.log, is it possible to clear it and type NV9X in that field?

Hi Jim, To create a new log file you should use the "File/Create New Log" menu item and enter your log file name and click the "OK" button. Also, to make things easier you can then use the "Options/Log Fields..." menu item and set the "Default Log File" to NV9X.log (or whatever name you chose for your file. This means you won't have to do a "File/Open Old Log" every you start XMLog.

3751. Exporting selected QSOs

Yahoo group: XMLog
Date: 2013-07-25 14:40:57 UTC
From: buzzmann555
Topic: 3751 Message: 3751

Hi again,

I am trying to export to a .adif file a bunch of QSOs that are going to be sent to the outgoing bureau. I am going to try GlobalQSL for the first time. I do not want to send the entire log to them, only the bureau cards I have here that I want to reply to.

I have gone through the 300+ cards twice now marking them with the
Ctrl B function to show that they were sent to the bureau on a certain date. However, after doing the Ctrl B thing for all of the cards I went to the export function and told the program that I wanted to export. Of course, I had the choice of exporting the entire log or the selected entries. I chose the selected entries option. When I exported, the only QSOs that were exported were the two for the last call sign that I had entered.

As I said, I have been through this stack of 300+ cards two times and still cannot figure out how to export ONLY those, but ALL of those, that I mark with the Ctrl B.

There must be a different way to mark the QSOs that I am missing. It seems this is a function that should be easily carried out by the program. I figure it must be "cockpit" error, but do not know how to get out of the tail spin.

Any help is greatly appreciated.

73,

Hi Buzz, It sounds like you want to select the log entries for which you just set the QSL Sent date. Assuming you used the same QSL Sent date for all the entries of interest just enter the that date as a search key and that will select the appropriate entries. If you set the date over a range of a few days you may still be OK, just enter a date range as the search key for the Date Sent field (for example >=7/1/13,<=7/31/13 would include all days in July 2013, see the sections on Searching the Log in the Help file).

Even after 50 some odd years in the hobby, I'm just getting into computer logging - don't ask, but I'm a Luddite and I've been doing paper logs for so long, I hated to give it up hi.

I like the XMLog a lot, but I have a little problem with mode reporting. I apparently don't understand how to enter a PSK mode entry - I enter PSK, but it doesn't show up when I run the log to check entries or totals per mode. I've been entering the paper logs for the past year which is why I'm curious.

Is there a special code for PSK in the Mode entry?

Thanks.

Hi Tom! I have been licensed since 1951 and understand the problem. I have been using mLog for at least 10 years. I use one of the older versions 4.96 mostly because I am lazy. Here's what I did:

I created a log named after the paper log number before I transcribed from paper to mLog. Go to Edit on the task bar at the top and go down to Edit Defaults and click.If you have a bunch on 28.000, punch that into Freq. Put in the RST Out and RST in. If you have a bunch on one date put that in (I use DD/MM/YY). Type in the mode. (PSK works with V4.96) I don't know if even the latest versions will allow you to punch in the alphabet soup of modes that exist today. If that is the case I type in the info in the Notes line at the bottom.
Go down and click Save.

Go back to File: Click on Open Old Log. Go to Select at bottom of page and click on Cancel. then go to Edit and click on Add a New Entry. You should find the Date, RST out/in, frequency and mode ready to go. All you have to do is type in the callsign.

Repeat this for the second entry in the paper log. If only a few contacts are made on a given date that may have to be punched in quite often (I work mostly contests so the only thing I have to change is the freq and Mode.) I put the name of the contest in the bottom line labeled Notes.

Once you get all the paperlogs entered in Mlog you can start using Mlog as the primary log. (If the last paper log was 21, your first computer log will be 32.) When I get about 1000-1100 contacts in a computer log. I print it out as a text file and make a label for the front of the three-ring folder. You now have a paper copy of your computer log. So you have two files for each one.

Once I got all the old paper logs converted to Mlog I created a new log called MASTER LOG and imported each computer log into it. This way I can find everything in one log.

This is a nice way to log for contests. I just bring it up, have Edit save the current date and set it for the current time. Frequency, etc. is punched in. So, when I work an op in a contest the only thing I have to do is type in his call. At the end of the contest I can look at that particular computer log in alphabetical order and decide which ones need a QSL.

Hope this covered what you wanted. You can contact Mike McManus also by e-mail. If I can help let me know.

73 and Gud DX

Hi Tom, I think most of the PSK varieties are allowed in the Mode field. You can define new data modes using the "Edit/Define Custom Modes" menu item. All the various data QSO's show up as RTTY in the reports since DXCC treats them all as TTY. Also, when you search your log you can select all the various PSK QSO's using a wildcard of =PSK* in the mode field (see the log searching section of the help file for more info).

Tom,
Your doing much better than me. I can't even get XMLog to send what I've logged to my LoTW page to update my contacts!
I just stopped using it totally and went to a simple spreadsheet. At least I can export that as a CSV file then use LoTW manager to convert it and then up date my on line records. I can't figure out how some of the other hams out there know exactly who you are by your call before they even come back to you? I'm pretty fast on the keyboard but these guys must have some kind of database tied in to their new radios for automatic logging. Now I can see this working with Packet, Packtor, RTTY, And even CW but not with voice? That's pretty amazing .

From: <george.familyuk@...>
Topic: 3783 Message: 3783

I am experimenting with XMLOG version 6.59 (admittedly, not the very latest) with a total of 15,827 entries in the log.

If I open the log and, before selecting any entries, click on "Export ADIF File / Currently Selected Log Entries" then 15,827 entries are correctly exported.

If I open the log and before selecting any entries, click on "Export ADIF File / All Log Entries" then only 15,097 entries are exported although XMLOG says 15,827 entries have been exported. The most recent entries excluded.

It's no big issue but it would be interesting to know if anyone else has experienced this and whether I am doing something wrong.

Many thanks,

Alex,

There isn't a course. You may need a "Navigator" to
borrow a term to help you through the process
though. I wouldn't hold out any hope for that as most
hams seem to avoid it although the digital crowd
seems to have no problems working with it.

Which should tell you something in and of itself. Nerds.

The simple truth is that this system is screwed up
beyond salvation. It was ill conceived, executed poorly,
is indifferently supported with minimal staff or
volunteers to help maintain the system to a higher
standard or offer expert help.

I'm not a dummy by any stretch of the imagination
and I have several people who have successfully
navigated the system to help me as I had been at it
for over six months and still no joy.

To explain: I finally got to the point where the system
would finally allow me to log in - which was the first
problem. None of the passwords they sent me worked.'
Ever. They sent three. Finally, I could log into the system
to request the certificate. It kicked back the request and
that took another two tries before I got that done - arrives
in the email. At this point, I think I've got this thing
totally under control. Took one of my contest logs, did
the ADIF magic conversion, attached the magic certificate
and uploaded the file. The system burped, took the log
and nothing appeared in the system except for an error
message - certificate numbers don't match.

Er.......I only have one certificate number - how could it
not match? Try it again. No joy. Ugh. Ok, what now?

On the advice of one of the local club members, I asked
for a new certificate - just in case. That should have cleared
it up.

Nope - no joy. I got to nosing around the LoTW web site
and my account information and discovered that indeed
the certificate number on file, didn't match the certificate
they sent me. Huh - now what do I do? I can use the
certificate number I have gives me access so it must be
valid, I only have one computer so it's not that....wait a

minute - I have a vanity call - anybody want to bet that
is the problem?

Yep. It turns out that I'm not the only one with this issue
and there is no known fix for it.

What a surprise.

I'm a former ARRL staffer, I appreciate what the ARRL does
for ham radio both in the US and worldwide. I've been on
the inside and see what the average staffer has to put up
with and it isn't pretty. You would think it's a hams dream
job, but it's not.

But this system is pure crap - unadulterated and foul. eQSL
has done it the correct way, has just as much, if not more,
integrity, it's easy to use and it works - first time no less.

ARRL members should be outraged at this sham attempt
to do cards electronically. When you have over 280 ARRL
members waiting in line to get an answer to a problem or
assistance and that assistance might not happen for a couple
of months, something is wrong - very, very wrong. I had
one issue with eQSL and got it solved within an hour by email.

The only solution to this is to write your Section Chief, Division
Director and K1ZZ himself to get something done - otherwise
it will stay the way it is - confusing and virtually useless.

One last thing - you would think that LoTW would handle WAS
QSLs fairly easily wouldn't you? It doesn't. That is one common
complaint I've been hearing all along my battle with LoTW.

And with that, I shall retire from the field of battle with LoTW
the victor - hi hi.'

Tom, if you are still interested in submitting QSOs to LotW, I suggest the following steps:

1. upgrade to the current version of TQSL (2.0); it's available here:

<http://www.arrl.org/TrustedQSL/tQSL-help/installation.htm>

2. start TQSL, and

2a. on the "Callsign Certificates" tab, double-click the entry for your Callsign Certificate, and verify that the information shown in the "Certificate Properties" window is correct

2b. on the "Station Locations" tab, double-click on the entry for your Station Location, and verify that the information shown in the "Station Location Properties" window is correct

2c. on the "Log Operations" tab, click the "Sign a log and upload it automatically to LoTW" button; use the "Select file to sign" window to select the ADIF file you wish to submit to LoTW

If you encounter any difficulty with the above steps, let me know via

aa6yq (at) ambersoft.com

Step-by-step instructions for using TQSL to submit QSOs, manage Callsign Certificates, and manage Stations Locations are available via

<http://www.arrl.org/TrustedQSL/tQSL-help/>

as well as via TQSL's Help menu.

for a new certificate - just in case. That should have cleared
it up.

Nope - no joy. I got to nosing around the LoTW web site
and my account information and discovered that indeed
the certificate number on file, didn't match the certificate
they sent me. Huh - now what do I do? I can use the
certificate number I have gives me access so it must be
valid, I only have one computer so it's not that....wait a
minute - I have a vanity call - anybody want to bet that
is the problem?

Yep. It turns out that I'm not the only one with this issue
and there is no known fix for it.

What a surprise.

I'm a former ARRL staffer, I appreciate what the ARRL does
for ham radio both in the US and worldwide. I've been on
the inside and see what the average staffer has to put up
with and it isn't pretty. You would think it's a hams dream
job, but it's not.

But this system is pure crap - unadulterated and foul. eQSL
has done it the correct way, has just as much, if not more,

integrity, it's easy to use and it works - first time no less.

ARRL members should be outraged at this sham attempt
to do cards electronically. When you have over 280 ARRL
members waiting in line to get an answer to a problem or
assistance and that assistance might not happen for a couple
of months, something is wrong - very, very wrong. I had
one issue with eQSL and got it solved within an hour by email.

The only solution to this is to write your Section Chief, Division
Director and K1ZZ himself to get something done - otherwise
it will stay the way it is - confusing and virtually useless.

One last thing - you would think that LoTW would handle WAS
QSLs fairly easily wouldn't you? It doesn't. That is one common
complaint I've been hearing all along my battle with LoTW.

And with that, I shall retire from the field of battle with LoTW
the victor - hi hi.'

No offense Dave, but I've done all that.

And thank you for proving my point - it is much to
complicated for a simple function like logging for QSL
purposes. You shouldn't have to go through all that
just to upload a log file.

Besides, my certificates don't match and apparently
it's not fixable unless the original W1TEF file is reset.

And I can't do that.

Thanks for the information though - I'm sure it will be
a help to others who are having issues.

From: <k9mrd@...>
Topic: 3791 Message: 3791

Some DX stations have not filed paper work, etc for DXCC certification. When uploading my log to Clublog, I get error messages for several of these contacts. Clublog suggests setting the DXCC Country Code to 0 (zero) or the Received QSL date to I (invalid). However, XMLog will not allow these entries. I even tried to setup a new country with a prefix of 0 (zero) and that did not work. Is there a work-around?

Topic: 3791 Message: 3792

Hi Wayne, If you set the log entry "Prefix" field to ? XMLog will not include a "DXCC" field in the corresponding ADIF entry. Not quite the same as explicitly including a "DXCC=0" field but I would expect that this would work.

From: <w1ect@...>
Topic: 3791 Message: 3793

Hi again, An afterthought - If setting the prefix to ? does not work (perhaps ClubLog will complain about a missing DXCC field?) you can edit your ADIF file to hack in a <DXCC:1:>0 into the appropriate entries. ADIF files are simple text files so you can edit them with Wordpad or Notepad.

The format of data in ADIF files is: <FieldName:FieldLength>FieldValue

Hi Mike,

I tried the '?' yesterday and forgot to mention that it does not work. Yes, I can edit the ADIF file, but Clublog suggests clearing the old file and uploading the entire log file on occasion. This means editing the ADIF file each time and that is a huge file/problem even using Ctrl F!! I was looking for a way to edit the XMLog file so I would only have to make one edit.

I could just delete the record, but sometimes the DX station is approved for DXCC at a later date.

Hello Wayne, I don't think there's much more I can do. I don't want to allow a DXCC value of zero in the ADIF file because this is not a legal value according to the ADIF specification. The enumeration for the acceptable values for this field consists only of valid country codes and there is no allowance for a country code of zero.

Hopefully ClubLog could to treat records with an no DXCC field provided in the same way as they currently treat records that explicitly specify a zero value. I have never dealt with them so I have no idea if they would be open to suggestions like this.

From: <w1ect@...>
Topic: 3791 Message: 3797

Wayne, One thing you could do is not include the log entries with ? as the prefix when you do your export. Search your log with a Prefix field search key of !=[?] (not equal to ?) and then when you do the export choose "Currently Selected Entries" rather than "All Log Entries".

Note that the peculiar form for the search key as !=[?] rather than !=? is required because normally the ? character is used as a wildcard to mean "match any single character". Enclosing the ? in brackets causes the ? to be treated as a normal (non-wildcard) character.

Topic: 3791 Message: 3798

Hi Wayne, I passed on your experience to the ADIF group and received this response:

Hi. ClubLog rejects QSOs if the submitted DXCC entity value differs from
the DXCC entity that ClubLog has determined from the callsign and date.

I've had a look and the ClubLog help does indeed say that an invalid value
of 0 should be used to represent the country being unknown.

I've raised a ticket with the ClubLog Support desk about this topic and
we'll see what the response is.

Mike

3799. Re: ClubLog

Yahoo group: XMLog

From: Dave Sergeant
Topic: 3791 Message: 3799

There is some confusion here. Setting the country to '?' will indeed stop XMLog listing those QSOs in its DXCC listings, and that does work. But it will not produce a valid DXCC country code number in the exported ADIF file.

ClubLog has a callsign checker on what you submit, independent of what you tell it is the DXCC. For instance, QSOs with Z6, Kosovo, currently do not count for DXCC purposes. ClubLog will highlight that problem and the QSOs will not be used for any ClubLog statistics. But that is for information only. Remember ClubLog is NOT DXCC in any form or shape, rather than a large database of QSOs that is used for various purposes, eg DXPedition QSLing, totally separate from LOTW and not supported in any way by ARRL. If ClubLog throws out a QSO it will explain why, together with a link to a fuller explanation. Whatever you set the DXCC code to it will still tell you the same thing and won't accept it for its records. So don't worry about it.

What is more important is, if you are claiming awards, how LOTW handles things. In the case of Kosovo it simply won't count - yes, you can upload that QSO to LOTW but it will never see a matching valid QSO. The information ClubLog gives you is just helping you in knowing whether it is worth using that QSO for a LOTW or DXCC credit.

Topic: 3791 Message: 3800

Dave,

Thank you for your detailed answer. I understand and have understood all that you stated. I am just trying to inhibit the messages emailed from Clublog once a problem has been discovered during log analysis. For example, I have many band slots filled by 5N/LZ1QK. Clublog has a specific exclusion from DXCC for this call. I have since filled those band slots with other contacts and would like to eliminate the error messages received from Clublog for the 5N/LZ1QK contacts. A memo from Clublog states setting the DXCC code to 0 (Zero) will do this i.e., DXCC=0 inhibits a call from Clublog processing, but retains the call in case it is approved by DXCC in the future.

It would seem the only way to address my problem and the problems encountered by others is to edit the ADIF file every time a complete log is uploaded....not an easy task as the size of the log and number of errors increases. An alternative would be to delete the problem contacts from my log which I do not wish to do for several reasons, one of which is mentioned above.

If XMLog error checking could be modified to allow a DXCC code of 'zero', this problem would vanish with a single key stroke!.

Thanks again for your input Dave!

Wayne

From: Dave Sergeant
Topic: 3791 Message: 3801

Knowing now the call you are having problems with, I have done a little research.

5N/LZ1WQ was indeed not valid for DXCC as he did not have a valid licence issued by the Nigerian authorities. He is now 5N3WQK, a valid licenced callsign and acceptable by ARRL for DXCC. So work him, or any of the other very active 5N stations such as 5N7M. You will not have any more QSOs with his old non-call.

There is no reason whatsoever to upload your complete log every time to ClubLog. It is only suggested by Clublog themselves as a way of ironing out bad calls (and you could indeed just delete the 5N/LZ1QK ones as they are no different from working a pirate station and will never ever be valid). The normal way of using clublog is just to upload new QSOs since your last upload and this is the way I do it every time. With nearly 65,000 QSOs uploaded there I am not going to upload that lot every time... So do that and you will never see those comments/errors again.

It actually annoys me that clublog does not set the default for upload for 'merge with existing log' and you have to manually select it every time. I have moaned, but it falls on deaf ears..

As I mentioned before, If you want to exclude the log entries that you have flagged as having "unknown" countries just do a log search with a Prefix search key of !=[?] (not equal to ?) and then when doing your ADIF export (or creating a report, etc.) choose "Currently Selected Entries" rather that "All Log Entries".

3804. Ver 6.62 Update

Yahoo group: XMLog
Date: 2013-12-27 19:13:04 UTC
From: <k9mrd@...>
Topic: 3804 Message: 3804

I keep XMLog, Spots History, Check Call/Prefix, and World Map open on my monitor.

Before I upgraded to Ver 6.62, each window 'remembered' its correct position upon starting XMLog. Now Check Call/Prefix and World Map always default to center screen and must be repositioned. XMLog and Spots History go to their positions when XMLog was closed last.

Is there a way to restore all window to their last position when XMLog was closed? Long ago when I was coding this was done in software, but have no idea how it is handled in modern systems. The OS is XP.

Hello Wayne, I can't reproduce the problem here - what version were you running before you upgraded to 6.62?

Have you made any changes to your monitor setup?

Perhaps there is some problem with the values saved for the windows position. You can try resetting all your XMLog window positions by running XMReset which is located in your XMLog install folder (usually c:\mlog). Before you run XMReset save a copy of your current options settings file mlog.ini (also in the install folder). Send a copy of this file to me (support@xmlog.com) as an email attachment.

Hi Mike,

Problem SOLVED!!

By shrinking the vertical size of the two windows very slightly, (they are positioned at top of screen) everything works fine again. The size difference is imperceptible. Originally the displays must have pushed up against or over the monitor's upper boundary. I have no idea how/why this happened......

Wayne

From: <w1nr@...>
Topic: 3810 Message: 3810

I am running xmlog 6.62 with serial port CW on COM1 and rig control via USB CI-V on COM4 to an Icom ProIII. There is an internet connection to packet cluster and a spots history window open. If I have Enable PTT checked on the CW port menu, every time a new spot is entered into the history window the rig gets PTT asserted two times, immediately after the sot appears for a short time, then again about 4 seconds later. No carrier so it seems to be just the RTS getting asserted and not DTR. CW keyer interface is a home brew opto-isolator IF using DTR for CW and RTS for PTT control. This setup works fine on Writelog and N1MM. Any ideas???

Topic: 3814 Message: 3814

After many years I've begun transferring QSLs from XMLog to LoTW and eQSL and I've run into something strange.

The LoTW and eQSL sent fields are set when I create the adif files, and the LoTW Received filed is set (as appropriate) when I import the adif file. But, I noticed random eQSL received dates set. And, they are all set to 4/22/13!

Anyone seen this before?

Bill

Topic: 3814 Message: 3815

Hi Bill, ADIF (and LoTW) provides two fields that apply to QSL Sent/Received info - one is a status like EQSL_QSL_RCVD which can be Y(es), N(o), R(equested), or I(gnore/Invalid), and an associated field like EQSL_QSLRDATE which is the date. The date is field is not required.

If XMLog finds the "RCVD" status set to "Y" and there is no associated date it sets the date value to "?". I thought that perhaps an older version of XMLog set the date to the current date but looking back through the older versions I find that this is not the case.

Perhaps this is just reflects the data in the incoming LoTW file? These files (and all ADIF files) are simple text files that can be opened with Notepad or Wordpad. You can search the file for the appropriate callsign/date and check it out.

I am rather confused what you are actually doing...

For QSOs you have entered into XMLog (as against imported from elsewhere) the LOTW and eQSL Received fields will be blank unless you have yourself set them to something. If they have been imported from somewhere else (eg a contest program) then they may have been set by that software (especially if you are using a program that does automatic uploads to eQSL).

If you export a selection of QSOs for upload to LOTW (via TQSL) and eQSL as an ADIF then those ADIF files will only use what is available in the XMLog data.

If you subsequently download your log data:
From LOTW, it will contain a LOTW_QSLRDATE field showing when you when the other party uploaded the matching data.

If you download your entire log from eQSL (option at bottom of eQSL inbox) that does NOT contain any EQSL_QSLRDATE information (just checked).

At what stage do those eQSL Received fields get set?

The EQSL_QSLRDATE fields get set when you set them. I set the EQSL_QSLRDATE fields manually in my log when I receive eQSLs.

I actually also set the LOTW_QSLRDATE fields manually as well, even though I know I can merge those into my log automatically if I like. But I do it manually because I prefer to eyeball the data in certain fields in case there is a difference between what the LOTW confirmation reports and what I've got logged. Since I don't chase paper anymore, it doesn't much matter to me if LOTW (or eQSL) confirmations are actually incorrect with some of their data as long as my log is correct.

I have found that there are a surprisingly high number of hams out there who do not have their TQSL station location files set up correctly for LOTW. Most of the DX stations are pretty good about having accurate station data in their location files. But It is a particular problem when U.S. stations run mobile and neglect to setup new TQSL station location files for the counties they are in when they work you. There are also other items that U.S. hams don't pay much attention to when they set up these TQSL station location files, as well. My experience in nearly 2 years of using LOTW (and eQSL) is that we receive confirmations that are completely accurate with regard to their station data only about 70% of the time.

Now obviously, if I was very active and made thousands of contacts all the time, these manual methods wouldn't work too well because they would be too time-consuming and tedious, but for somebody like me who has only about 11K contacts in 50 years of hamming, they work fine.

Good point Dave, log entry fields are not updated by LoTW imports unless you explicitly edit them when LoTW/XMLog mismatches are found during an Import/Apply LoTW Data To Log operation.

Hi,

I've never been able to run XMLOG on XP home unless I'm administrator which I don't want to do. When I run it under my ID I get errors such as Can't open custom layouts, MS Jet Engine can't open layouts.mdb. Open by other user or need permission to view data. I didn't have this problem with a laptop running Vista but that PC just died so I want to use my XP home desktop.

Tnx,

Mike KA2FIR

Hey, Mike nice to see you here!

XMLog has been my logging program of choice since mid-2012. I run it on XP Pro but as administrator, which I realize you don't want to do.

It would probably be to your advantage to do that if you really like the program as I do. Perhaps you could assign administrator privileges to your personal account and that might solve your problem?

Hi Mike
Try this right click on the mlog folder, and then click on properties. In the new popup under the general tab if read-only is checked, uncheck it, then click the security tab. Find your user name in the Group or user names. Highlight your user name and in the permissions box, Copy down what is checked first before you start in case you need to put it back.
Then check everything under Allow so you have full control over that folder. And, then click apply and try again.

Hi Wayne, I posted a message at the ADIF group describing the Clublog usage of the DXCC field value of zero to represent "undefined" . It started a long discussion that ended with the ADIF spec being updated to allow a zero value for unknown. The main concern was that the ARRL LoTW system would reject this value but it turns out that the ARRL had previously changed LoTW so that it would accept a zero value for this field (it just hadn't been documented).

I've posted a XMLog beta version at www.xmlog.com/beta http://www.xmlog.com that includes this change.

I worked RI4ANT on New Years Day. All directional indications were that the station was near Antarctica and Vlad was heard using R44ANT on Jan 2 from South Shetland. Do you have any information about the operator of RI4ANT or its location. Club Log indicates that it should be European Russia but propagation at the time and my directional antenna say otherwise. I worked the station on CW at 35 to 40 wpm which is consistent with Vlad's operating. I suppose it could have been a Slim, but he would need to be at a very southern latitude and be very proficient at CW.

Was there any other error info (numbers or text) displayed, perhaps in the error dialog heading?

The "Custom Label Layouts" database file is named "Layouts.mdb" and and the Alert History database file is named "Alerts.mdb". Both should be found in your XMLog install folder (normally C:\XMLog).

> I tried the repair log option but that did not work!!

The "Repair" option only applies to log files and not to these other two files.

Without any more detail on why the file(s) can't be opened it's hard to come up with a strategy for fixing the problem. If the files seem to exist in the XMLog folder and XMLog doesn't seem to be having problems reading your log file (i.e. XMLog's Microsoft Access database interface is working) then it will probably be necessary to replace the files with backups or recreate them.

The Layouts.mdb file is backed up as part of XMLog's backup feature so you can perhaps get a previous copy from XMLog's Backups folder. The Alerts.mdb file is not backed up but you can exit XMLog and delete the current broken copy and restart XMLog and it should create a new one (of course your cluster alert history will be lost).

The most brute-force method of replacing the two files would be to exit XMLog, delete the existing copies, and the re-install XMLog which will replace the files with fresh copies (and lose and custom label definitions and alert history).

Hi Mike,

In trying different things to correct the problem
I found another ".mdb" file in the program folder along with
the layouts.mdb and the alerts.mdb files.

I erased this third .mdb file (can't remember the name of it)
and everything now seems to be working fine!!

3854. Changing UTC time in XMLog

Yahoo group: XMLog
Date: 2014-09-23 21:25:30 UTC
From: ni5dx@...
Topic: 3854 Message: 3854

I have installed XMLog on an Asus mini-laptop. I did all the setup information. I noticed this morning when I opened the program that the UTC time that is shown in the program is 12 hours off of the actual UTC time. The computer time is correct. I cannot find anywhere in the HELP file or in the program where I can change the UTC time so that it is, in fact, the actual UTC time. Any help is greatly appreciated.

Buzz - NI5DX

3855. LoTW Problems (State set for non US/Canada log entries)

Yahoo group: XMLog
Date: 2014-09-24 15:48:48 UTC
From: w1ect@...
Topic: 3855 Message: 3855

There seems to be a problem with the State field being set for non-USA/Canadian log entries which results in problems with LoTW submits and downloads (as well as bogus info in your log file). I suspect this is related to the "Set Info from Callbook" option being enabled, I'll check into it soon and then let you know the results. In the meantime it would probably be best to delay any XMLog LoTW activity until I find the problem.

I am wondering what the issue is, as I pull my logging info from the QRZ XML service and have never had the State field populated by anything other than a US state or a Canadian province from that service. Perhaps this has something to do with which service you are using?

Re: LoTW Problems (State set for non US/Canada log entries)

I was locked into the idea that the problem was caused by XMLog somehow having the State field set to some bad value when the XMLog user's QSOs were uploaded to LoTW and then XMLog was complaining when it saw those values come back on a download.

I wasn't considering that those "bad" downloaded values might be coming not from XMLog's QSO data but from the QSO data uploaded by the station that was worked.

In any case, the main problem was assuming that the State value was only appropriate for USA/Canada QSO's and trying to validate them as such. I'll have to make a change to the QSO validator so that it only checks for USA/VE state/province values when appropriate (and just not bother trying to validate State values for other countries).

I'll let you know when I have something ready.

3863. Contacts not showing in Award list

Yahoo group: XMLog
Date: 2014-09-30 04:34:53 UTC
From: mailing_lists@...
Topic: 3863 Message: 3863

After uploading my contacts from the RTTY contest this weekend, I checked my WAS RTTY Award totals. I was still stuck at 46 states. I checked the WAS Checklist and it showed that I was missing MN and MI. I knew that I worked those states several times during the contest. But why weren't the totals updated?

I looked at the entries for the MN and MI stations, and manually entered the states, looked at the WAS award totals and checklist and behold, they were there. Why did this happen? I thought that XMlog was supposed to get the states?

When I looked at the entries from the past contacts, up until 8/15/14, I noticed that the state and county were filled in. Did I accidentally change a setting?

Bill

Topic: 3863 Message: 3864

Hi Bill,

Take a look at the ADIF file that you imported and see if the state info was included - for example an entry might include: <STATE:2>MN

ADIF files are simple text files that can be opened with Apps like NotePad and WordPad.

Hi Evan,

Are you sure the new PC's serial port is port 4? Here's one way to see what you have:

1) Click on Windows Start button
2) Type in "Device Manager" in the "Search Programs and Files" area
3) Click on "Device Manager"
4) Click on the "+" next to "Ports (COM & LPT)"

This will list the various ports you have, port 1 will show up as COM1, etc...

Topic: 3873 Message: 3876

Hi John,

Version 6.65 of XMLog included an update to conform to the latest ADIF specification that now uses "MODE" and "SUBMODE" fields to describe the mode. In the case of all the PSK variations the spec says MODE should be "PSK" and SUBMODE should be PSK31 (or PSK63 etc). The former ADIF scheme just spec'ed the MODE to be set to "PSK31" and had no SUBMODE field. Apparently the ARRL isn't allowing this new format. (Or perhaps there's an update to TQSL?). I'll ask the ARRL and let you know their response.

In the meantime if you want to do some hacking you can edit your ADIF file to remove all the <MODE:3>PSK fields and then change the <SUBMODE:5>PSK31 to <MODE:5>PSK31

The ADIF files are just simple text files that can be edited with WordPad or NotePad, etc.

From: WILLIS COOKE
Topic: 3873 Message: 3877

LOTW and ARRL Awards do not recognize modes of digital and records them all as RTTY. If you want to keep PSK separate from RTTY you can either record the digital mode in noted or do a search and replace in the ADIF file to replace the modes that you wish to have in your XMLog with RTTY. You will need to do this for each mode that XMLog will allow. If you want the ARRL program to change it for you, GOOD LUCK!!

I have downloaded the latest TQSL and yes, it still complains about MODE=PSK.

I got a response from the ARRL noting that my complaint has been forward to the developers, I'll keep you up-to-date...

Again, If you want to hack your ADIF file, delete the <MODE:3>PSK fields and change the <SUBMODE:5>PSK31 to <MODE:5>PSK31 (or PSK63). If you change the mode to RTTY folks that download your QSOs will not get the correct mode.

I am not complaining about not being able to report PSK. In my opinion, it is not different than RTTY, so I support the ARRL position to a certain extent. I am not particulary fond of any of the digital modes except manually sent and decoded CW, but then I am an old ham of 58 years duration and nearly 74 years of age. I find digital of all sorts particularly boring. I would prefer that ARRL just call it DIGITAL or DIG than RTTY, but as a contester and DXer, I think more of us use RTTY than the other modes. I know that RTTY has been in use since the 1930s and that PSK is more popular with the younger crowd, but I think that PSK will soon be abandoned for some better and easier digital mode. I made a brief excursion to try PSK-32 and RTTY and found that the conversations involved pushing a couple of F keys and reading some pre-loaded message. The only real convrsations I was able to find usually included that the other party was exploring a new mode, usually preferred CW and would soon abandon PSK and go back to CW. I realize that there are many, particularly younger people who do not agree. There has never been and never will be consensus abot which ham radio mode is most enjoyable.

Hi Willis,

The matter at hand is supporting the current ADIF specification. The ADIF spec is periodically updated in order to better fulfill it's objectives - to allow accurate exchange of QSO info between programs. So, it's not a matter of anybody's point of view it's just a matter of adhering to the specification.

Here is the reply form the ARRL on how to fix this.

John,
The next version of TQSL will accommodate the ADIF sub mode.
Until then you can educate TQSL to know the mode PSK means PSK31.
Mapping TQSL to read the mode output from your logging software.

1. Open TQSL
2. Select [File] - [Display or Modify Preferences] - [ADIF Modes]
3. Click the ADD button on right.
4. In the mode window enter the mode as it is expressed in your logging program.(PSK)
5. Use the drop down menu to select the mode that you want it to represent. (PSK31)
6. Click OK - Click OK
7. Now you can sign the log and upload the TQ8 file. Trusted QSL will convert the mode as it expressed in your ADIF file to an acceptable ADIF mode.

Thank you for using Logbook of The World
73,
Norm Fusaro, W3IZ

Thanks Mike for your help too.

3894. CAN'T OPEN RIG PORT ERROR

Yahoo group: XMLog
Date: 2014-10-24 01:18:17 UTC
From: FAZAMY@...
Topic: 3894 Message: 3894

Ever since I got a new Windows 7 computer I can't get the rig to communicate with the computer. I've posted my situation on several bulletin boards. I have a TS-480. I used XmLog and N1MM successfully on my Vista and Windows 95(?) machines.

I bought a Startech cable and no change. The original TS480 cable didn't communicate either.
I've installed the new drivers.
I have selected the correct COM port on the XmLog.
I selected all 3 Kenwood settings on the HF port select to no avail.
I selected various baud rates on XMLog and the rig to no avail.
All the other settings on HF Port Settings that worked before remained the same.

It's got to be something I'm overlooking? Is there something inherent in OS 7 that's causing the problem?
Any ideas?

Tnx,
Evan

Have it working somewhat. It's not like it was before, but I'll work on it.

3896. Downloading LOTW Data

Yahoo group: XMLog
Date: 2014-10-24 06:20:23 UTC
From: martin.gw4tpg@...
Topic: 3896 Message: 3896

Been using LOTW with XM Log for years with no issues however this morning get a 12156 error when attempting to download from LOTW server via import / export menu and download / validate LOTW data
- strange as this option has worked fine for me in the past, my version of XM Log is 6.66 by the way. Anyone else seeing this issue?

Hi Martin,

I'm also seeing the 12156 errors on LoTW downloads. It seems that the text for this error is "The HTTP redirect request failed" - problems with the LoTW server perhaps?

I also see the same problem using Firefox with the same URL that XMLog uses for the download.

If this problem persists you can do your LoTW downloads from the ARRL web page which seems to be working ok. You log on to the LoTW page and select "Your QSO's", select the records you want to download, and then select "Download Report". Then you can validate and apply the downloaded file which gets saved as "lotwreport.adi".

Hopefully this problem will "go away" soon, otherwise I'll try for some assistance from the LoTW folk.

I had the same problem last night. I changed the lotw URL in xmlog and it solved the problem. I am not at my computer to relay the URL at this time. I also use HRD and got the URL from its setup.

I don't know if this is the correct answer, but I had this issue just last night. The default LOTW URL in my version is:

https://p1k.arrl.org/lotwuser/lotwreport.adi

I switched to this URL which worked for me. It is:

https://lotw.arrl.org/lotwuser/lotwreport.adi

3902. Problem with loading XM log after N1MM+ installed

Yahoo group: XMLog
Date: 2014-10-27 17:26:16 UTC
From: WILLIS COOKE
Topic: 3902 Message: 3902

I installed N1MM+ for the CQWW SSB Contest. When I first loaded N1MM+ it would not control my Elecraft K3, but XMLog had no difficulty. I copied the settings I used for XMLog and the only difference was that I was using 9800 baud for XMLog and 4800 baud for N1MM, so I changed to 9600 baud. After trying hot reboots and cold reboots N1MM+ started controlling my K3. After the contest, I closed N1MM+ and loaded XMLog, but it will not control my K3. Anybody have an idea what I need to do to switch back and forth with reliabiiity? I like both the programs and I have been able to switch back and forth with N1MM Clasic, but I could not run both programs at the same time. It seems that there is something that should make them both work without cold rebooting between and I have not tried that yet.

From: w1ect@...
Topic: 3905 Message: 3905

I've posted a beta version at http://www.xmlog.com/beta http://www.xmlog.com/beta that includes two changes related to LoTW downloads

1) I've changed the default ARRL URL from www.pk1.... to www.lotw....

2) I've replaced the method used to do the actual downloads. I've had some problems in the past with the old method (the "Internet Transfer Control"), it would sometimes hang up before large downloads completed. I'd appreciate it if you could try a download and let me know if you have any problems.

3906. Anyone ever exported log files to fldigi logbook?

Yahoo group: XMLog
Date: 2014-11-14 19:56:53 UTC
From: FAZAMY@...
Topic: 3906 Message: 3906

In trying to export XMLog psk log to fldigi logbook, PSK subsets -- 31, 63, 125 -- do not appear in the mode column. The file gets imported only as PSK. As you know the log files get converted to adif so that they can be recognized by other log formats. I'm using XMLog 6.66.

Topic: 3906 Message: 3908

Hi Evan,

I recently made changes to XMLog that brought it up-to-date with the current ADIF specification.

One of those changes was a new scheme for defining the QSO mode, the old scheme just used a MODE field while the new scheme uses a MODE plus a SUBMODE field. While I suppose it's nice to keep up-to-date the down side is that apps that try to import these ADIF files might not be able to deal with this new MODE+SUBMODE scheme. The ARRL app used to manage LoTW is one example of this (they are currently testing a new version of the TQSL app that can handle the MODE+SUBMODE scheme). It seems that FLDIGI is another app that isn't ready for this change...

I you're willing to hack the ADIF file created by XMLog you can probably get around this incompatibility. ADIF files are just simple text files that can be edited by apps like Wordpad or Notepad. A typical ADIF PSK31 mode definition in the previous scheme would have included a field of the form:

<MODE:5>PSK31

while the new scheme would have two fields:

<MODE:3>PSK <SUBMODE:5>PSK31

where the numbers after the colon specify the field length.

So... to hack new files to the old format

1) Do a global replace of <MODE:3>PSK to nothing

2) Do a global replace of <SUBMODE:5>PSK31 to <MODE:5>PSK31

3) and do similar replacements for any PSK63 or PSK128 QSOs

Norm

XMLog uses a Microsoft Access database with the extension changed to .Log instead of .mdb. You cannot read an Access database with Notepad and if you open it with Notepad and accidentally save it with Notepad, you are likely to corrupt it.

The 3343 error code seems to be indicating the database is corrupted.

XMLog has a Repair Log feature under the File menu. I have never used the repair option myself. You might try this feature to see if it will fix your problem. Before doing so, I would suggest you make a copy of the log file as a backup first.

I wish you luck,

Jim, K9JWP

Jim,
Thanks for the reply, I tried the repair and it did help on a file but not the one I was hoping for, it did add almost a full month to the log. I did a search on the net to find some software to fix the corrupt file but didn't have much luck. It doesn't matter what program I use to read it. I have some rare dx in the file that I can't get to and I hate to lose those records. Thanks for the reply Jim.

You need to do that with the ARRL supplied upload software. That and uploading it to LoTW is what it does. First download the contacts you want to upload to ADIF then upload that with the LOTW software to LOTW. ARRL continues to be a PITA. 3921. HamQTH.com callbook lookup failing

Yahoo group: XMLog
Date: 2015-01-07 17:35:09 UTC
From: k0ekl@...
Topic: 3921 Message: 3921

I've noticed just in the past couple days that callsign lookups to Hamqth.com are failing with this message:

<CALLSIGN> not found in callbook

Format error in session data from
HamQTH.com
The download of the specified resource has
failed.

(Where <CALLSIGN> is any callsign that I'm attempting to look up or log in XMLog.)

I have confirmed that I am using my correct username and password for HamQTH.com and that calls being searched for can in fact be found by searching via the HamQTH.com website.

I can't reproduce the problem here, my callbook lookups using HAMQTH.COM work OK and don't produce any error messages.

Is anyone else seeing this problem?

3925. How does WAS Worked/Confirmed report work?

Yahoo group: XMLog
Date: 2015-01-08 20:49:39 UTC
From: Bill Turini
Topic: 3921 Message: 3925

Folks

For some time now (over a year), I've been tracking my WAS RTTY award contacts and felt that something was "strange" about the "States Worked/Confirmed" report. I've even gone as far as thinking of writing a program to parse the log entries and produce my own report, but I can't see how the program could be incorrect.

Today I decided to really , really look at my problem and I found some things that I don't understand. Perhaps some of the learned folks on the list can explain them.

First, some background: I select | Awards | WAS | States Worked/Confirmed | ; then in Modes/Bands I checked "Data" and the bands 80-10.; Include "accepted" entries (whatever that is) and Include LoTW Confirmations (which I want) and produce the report.

On the report:

The first thing I notice in the "Band/Mode: RTTY" is that I don't have DE confirmed. This is correct. My everlasting hatred goes out to folks in DE who will work you for a contest, but not confirm. Next thing I notice is that I have a confirmation for KS and it is the only station worked. Pardon me, I have 9 worked and confirmed in the log. Doing a bit more checking, I see that only unconfirmed stations are listed under worked - is this correct?

Skipping on to the Band/Mode: 20, I see that I have worked DE. Wait a minute ! I only have one DE on RTTY in my log and he's not confirmed. I look up the call, and I worked him on SSB. The smoking gun! I look up a number of other calls on all the bands and they are all SSB, not RTTY.

When I produced the report and selected Data as the mode I assumed the report was going to be for RTTY (or PSK). Apparently that's not the case, or I am doing something incorrectly. Can someone explain this to me? All I want to do is get a listing of states worked/confirmed for RTTY.

Thanks,

Bill

Hi Bill,

This report is supposed to be a guide for selecting which QSO's should be QSL'ed to boost your totals.

Include "accepted"; entries (whatever that is)

Accepted QSO's are those that have been credited by the ARRL (that is, the WAS Submit date field has been set). These QSO's are not listed by default since they are not candidates for QSL'ing.

Next thing I notice is that I have a confirmation for KS and it is the only station worked. Pardon me, I have 9 worked and confirmed in the log. Doing a bit more checking, I see that only unconfirmed stations are listed under worked - is this correct?

Yes, the idea here is that for QSL'ing purposes you are interested in distinguishing between QSO's that have been confirmed and QSO's that have only been worked and not yet confirmed - these QSO's are candidate for QSL'ing to increase your totals.

Skipping on to the Band/Mode: 20, I see that I have worked DE. Wait a minute ! I only have one DE on RTTY in my log and he's not confirmed. I look up the call, and I worked him on SSB. The smoking gun! I look up a number of other calls on all the bands and they are all SSB, not RTTY.

Sorry Bill, I guess the documentation could be better here. When you pick Band/Mode:20 you should consider associated results separate from the RTTY results. That is these results apply to your ARRL WAS band/mode totals and not to your RTTY totals. The WAS report follows the same logic as the DXCC worked/confirmed report which in turn is associated with the DXCC awards:

- There is a general award where the total can include QSO's for any bands and modes,

- There are mode specific awards where the total includes QSO's only using that mode (and ignoring the band).

- And there are band specific awards where the total includes QSO's only using that ban (and ignoring the mode).

So as you can see these reports are focused on selecting which QSO's should be QSL'ed to increase your totals for any/all of these three award categories. (Which, by the way, is the same goal as the Critical QSO's report where this function is a bit more obvious).

I've done some more checking here but I still can't reproduce the problem. Is it possible that your anti-virus software or firewall is blocking XMLog? Some protection software requires you to specifically allow individual programs access to the internet.

Hello Wim,

I found a description of the Flex CAT commands and it looks like they took the route that other manufacturers have used lately - they have chosen use the Kenwood CAT command format (at least for the most common CAT functions). This means that until I officially add "Flex" to the rig list you can set your rig type to "Kenwood" and see if that does the trick. I'll take a closer look at the documentation and see if their Kenwood emulation is appropriate for the simple CAT commands XMLog uses.

One thing to note, when using XMLog's built in rig-control features it needs exclusive use of the port to the radio. This means that you can't have FLDigi or N1MM running and accessing the rig. However, many programs use a rig-sharing system called OmniRig to share a rig port and XMLog can be set up to access your rig via OmniRig. Of course this is only useful if all the programs support OmniRig but this is becoming more common as time goes by. Info on setting up OmniRig can be found in the help files.

So, the first step would be to set your rig type to "Kenwood", close any other programs you have running that might be using the Flex's CAT port and then check to see if XMLog can communicate with your rig. One simple test is to start a fresh log entry and then double-click on the Freq and Mode fields and see if XMLog can get this data. If so, then you can decide whether using OmniRig would be useful.

Topic: 3929 Message: 3931

Hi Mike

thanks for the pointer, so I selected Kenwood and 9600 bps and I got it
to work to read frequency and mode/power and such.

The Flex software comes with a SmartCAT program and it can create extra virtual serial
ports.
So I use COM4 for Fldigi and a new virtual port COM5 for XMlog and both
seems to coexist without extra other software.

I need to test it a bit more but works fine when I type CTRL-A to add a new log entry it
picks up the freq and modes.

thanks
- Wim

Sorry to be tardy with this. I tried installing XM Log on an old laptop running XP and nothing else, no antivirus at all, and observed the same problem.

That said the problem disappeared on January 17th and has not reoccurred. Perhaps it was my ISP? The important thing is that it works again.

Thanks for your attention to the issue, Mike. Yours is still my favorite log program and I've evaluated almost all of them.

3938. Possible bug: Problem sending DX spots when using Omnirig

Yahoo group: XMLog
Date: 2015-02-01 20:26:18 UTC
From: k0ekl@...
Topic: 3938 Message: 3938

I have noticed that since switching to OminRig to allow multiple programs to share the serial port that my K3 is connected to there is a problem sending DX spots.

When using Omnirig, if I go to the packet window and hit F4 XM log generates a cluster message like this: "DX ? "callsign" where "callsign" is whatever call is currently defined as #HIM.

If I close all programs that utilize Omnirig and switch XMLog to directly use Com2, the serial port that my K3 is connected to a correct message is generated "DX 24893.0 FO8AA" for example.

I assume that this is just a communications glitch when querying the rig for it's frequency when generating a spot as XMLog correctly fills the frequency field in normal logging when using Omnirig.

Hi John,

Check this note from xmlog.com

Mike - W1ECT

- Version 6.65 included changes to support the new ADIF scheme that uses a combination of MODE and SUBMODE fields to describe the QSO mode. Unfortunately TQSL (the program used to "sign" ADIF files prior to uploading them to LoTW) does not yet support this new scheme and results in error messages about illegal modes like PSK. To handle this problem until a new version of TQSL is available you can use a feature of the current TQSL version to map unrecognized modes to acceptable values.
1. Open TQSL
2. From the "File" menu select "Display or Modify Preferences..." and then select the "ADIF Modes" tab.
3. Click the "Add..." button.
4. In the "Add ADIF Mode" window enter the unrecognized ADIF mode to be mapped (PSK).
5. Select the mode to map to (PSK31) from the "Resulting TQSL Mode:" drop down menu.
6. Click OK
7. You can now sign the ADIF file and upload the TQ8 file to LoTW.

Hi, Bill...

Whether or not the grid square field for your own station data is actually used for anything, I know that it would drive me crazy if the incorrect data was in it for any records in my log.

If the number of records you would have to change is prohibitively large, one thing you might try is to manufacture an ADIF file of all of the entries that have the incorrect grid square. Simply Select on that field for the incorrect data and then export the ADIF file of those records.

Then use a decent simple plain text editor to do a find and replace of the incorrect grid square to the correct one. Then import the resulting ADIF file back into XMlog. At the time of import, you may indicate that you want the imported data to replace the existing data in your log. That will fix all the records in one operation.

Barry

I followed your suggestion and change the 58 incorrect grid squares.

Then I RTFM for the hundredth time and found that there is an EDIT command that will allow you to change the station info for multiple entries. :-o

Now I am reading the manual for the 100+1 time to see if I can answer my own question on how to apply eQSL data to the log.

3959. Re: eQSL Handling in XMLog

Yahoo group: XMLog
Date: 2015-03-11 15:27:45 UTC
From: w1ect@...
Topic: 3947 Message: 3959

Hi Bill,

XMLog does handle the eQSL-related fields in ADIF files (EQSL_QSLRDATE, EQSL_QSLSDATE, EQSL_QSL_RCVD and EQSL_QSL_SENT). Outside of ADIF imports that happen to have these fields set the only way the set the XMLog fields is manually.

Since eQSLs are not accepted for ARRL/CW awards any eQSLs are ignored for awards tracking reports.

Hi, Puck...

Try Display --> Sort By --> select QSO Date/Time (reversed) --> Press OK

Or, edit your Mlog.ini file and change LogSortBy=When to LogSortBy=Reverse

Hi Dave, PicomClient isn't something provided or used by XMLog and I don't know why the installer would try to load it. Are you using the official version from XMLog.com?

A Google doesn't reveal much about PicomClient but it looks like it's one of those apps that is used to install adware/searchbars/etc. along with the main app.

A search for XMLog on the ARRL website comes up with a single link in a contest bulletin from 2002 and has the correct address - http://www.xmlog.com/ which takes you to Mike's site. I have just upgraded to the latest version, 6.74, via that and it installed normally with no cryptic error messages. As Mike suggests, those sort of unwanted bundled applications come if you download from a third party site - I encountered one yesterday and nearly got caught out. But downloading from Mike's site is safe.

Mike, I know we had a discussion about this many moons ago, but your prefix file still has the wrong prefixes for Kaliningrad - only R2F and R2K are now Kaliningrad, every other R2 call is normal European Russia. I have my own updated prefix file that handles these properly.

4000. v 6.74 & TS480

Yahoo group: XMLog
Date: 2016-01-23 19:47:29 UTC
From: FAZAMY@...
Topic: 4000 Message: 4000

I'm having difficulty with v. 6.74 communicating with TS-480. I have to double click date, time, frequency and mode to get the info on the log.

Is there something wrong with my setup listed below?

Here are the settings from an older version that worked with my gear:
COM 5
BAUD 5
DATA BITS 8
STOP BITS 2
PARITY NONE
RTS ALWAYS ON
FLOW CONTROL NONE
KENWOOD

I'm not sure if baud 5 goes on this list. I don't see baud listed on 6.74 Port selector. I might have put it there for another situation.

I've tried 4800 and 9600 bps on log and TS480.

Evan

Topic: 4000 Message: 4001

Hi Even,

I have to double click date, time, frequency and mode to get the info on the log.

This is the way things work by by default. If you want to have these fields set automatically when you open a new log entry first choose the "Edit/Edit Defaults For New Log Entries" menu item and set the appropriate options at the bottom of the form. Then choose the "Edit/Use Defaults For New Log Entries" menu item to enable these defaults (when enabled this menu item will have a check-mark to the left - each time you click on this menu item it will reverse the check-mark setting).

I don't see baud listed on 6.74 Port selector.

If you choose the "Options/HF Rig Port Select" menu item you should be able to select the baud rate used by XMLog.

Topic: 3947 Message: 4002

Hi John,

It's going to take me a while to check this out. In the meantime you can open your AIDF file with NotePad or WordPad and globally change all the "<MODE:3>PSK" entries to "<MODE:5>PSK31". The value after the : is the number of characters. You can also delete the "<SUBMODE:5>PSK31" fields but I don't think this will be required, TQSL will likely ignore them.

Mike - W1ECT

From: w1ect@...
Topic: 3947 Message: 4006

Hi John,

I see that things are just as you reported. TQSL 2.2 doesn't handle a MODE PSK + SUBMODE PSK31 and the "Custom Mapping" feature used to map PSK to PSK31 no longer works. This means that the only option now is directly hacking the ADIF file to change the <MODE:3>PSK fields to <MODE:5>PSK31

I sent an email to the ARRL describing the problem. I'll keep you up-to-date.

Mike - W1ECT

4007. Entry field question

Yahoo group: XMLog
Date: 2016-02-03 20:07:11 UTC
From: Tom Francis
Topic: 4007 Message: 4007

Greetings,

I have been activating parks in the NPOTA event. I've been using XMLog to build the .adi file as we use paperlogs - its easier for my activation partner and me to cross check especially with CW calls.

For CW, when entering the exchange in the sent field, it will not allow for a full exchange - 599 NS55 for example. It has six spaces which makes it 599NS55 which, and I know this is picky, just offends my inherent sense of "order" :)

Is there away I can expand the field to seven or eight spaces? I don't want to burden the programmers as they have enough to do, but if I could do it myself that would be cool.

Very best regards,

Tom, W1TEF/4

According to his download page. You can modify it. As far as I know he is the only developer. He wrote the program back in the dos days.

Topic: 4007 Message: 4009

Hi Tom,

The RST field is only designed to contain an RST value, it's length got extended a bit because some wanted to include modifiers that are sometimes used with RST values (like A for aurora).

It's best to include any contest exchange in the Notes field in the form "In: whatever" and "Out: whatever". Since XMLog is not designed as a contesting program it's not very convenient to use it as such. Most folk (like myself) use a contesting program like WriteLog, N1MM, etc. and at the end of the contest use the contest logger to create an ADIF file and then add that data to your log by importing that ADIF file.

Hi Mike,

I hope the ARRL responds to your questions, as they never answered my question about it at all.

Probably, because they don't know how to fix their program or don't want to fix their program.

Thanks and 73

John W3ML

TQSL version 2.2 and associated configuration file version 6.0 is now available and seems to handle the ADIF mode/submode fields without problems. Also, the "Custom Mapping" of PSK->PSK31 is no longer needed.

Rick K1MU, the volunteer who develops TQSL, and Mike K1MK of the ARRL staff did the work.

Anyone needing help with LoTW is encouraged to send email to

LoTW-help(at)arrl.org

or post a message on the ARRL-LoTW Yahoo group, which you can join via

arrl-lotw-subscribe (at) yahoogroups.com

There is an email list for developers, to which Mike W1ECT has access.

73,

Dave, AA6YQ (member, ARRL LoTW committee)

4016. How to move XMLog

Yahoo group: XMLog
Date: 2016-02-07 20:54:44 UTC
From: Bill Turini
Topic: 4016 Message: 4016

Folks

I need to move XMLog to a new computer. I'd like to keep my
configuration file and the special calls file. How can I move it in the
most painless manner?

Thanks,

Bill

Hi Bill,

Just move your install folder (usually c:\mlog) with all the files and sub-folders to the same place on your new system. Then install XMLog specifying the same folder.

All the options are contained in .ini files which are not over-written during an install (so you don't have to worry about losing any info from the system registry).

Options->Packet Options and Port Select->Port
The entry for Internet Address should be "dxc.k1ttt.net 7373" then hit save.You can also create additional entries by putting a different address into the field and hitting save.

Put the data in a text file with a name like NETW1NR.nod into your XMLog install folder (normally c:\mlog).

Then you can use the Packet Window's Connect/Start Node File menu item to access the file. You can also use the Options/Packet Options menu's Port tab and set the Internet Auto-Connect value to NETW1NR (or whatever file name you choose). Then XMLog will automatically execute this node file when the packet window starts up.

Check the help file section on node files for more info.

4035. Windows 10

Yahoo group: XMLog
Date: 2016-03-31 20:04:23 UTC
From: w1ect@...
Topic: 4025 Message: 4035

Hi Bob,

I'm not running a Windows 10 system here yet but I do have a local ham that switched to Windows 10 and didn't have any problems.

After doing an install on a new system, copy files with .log, .ini, and .mdb extensions from your old system, replacing the default files created during the install.

Here's an explicit list is from the "Backups" section of the help file:

*.log Log files
mlog.ini General options settings
histinfo.ini Spots History Window settings
spotinfo.ini Spots Map Window settings
labels.ini Custom label page layouts
layouts.mdb Custom label definitions
memories.ini Rig and Rotor memories
report.ini Display/Display Excel settings

I switched to Windows 10 when they offered the change free. Beware of anything that is free because there is a catch. Microsoft can change it any way they wish while you are not watching but have the computer working. You cannot control anything! It has always been that way, but you could trust Microsoft not to do dirty tricks. They have changed their attitude and business practice so that now they will delete programs or change the operating system so you can't find them and they can direct you to their "Store" for your new software which is now at a reasonable price, but for how long. Once you are in Windows 10, you cannot go back and you can not trust Microsoft. I have crossed the line with Windows 10 and I am trying to find a solution. So far, I have not. Someone will find a way out, but who or when, I do not know. Willis 'Cookie' Cooke,

There seems an awful lot of misinformation in some parts. Those of us
who HAVE moved to Windows 10, turned off most of the telemetry and
installed Classic Shell so that it looks to most intents and purposes
like Windows 7, have come to rather like it. I was sceptical at first,
but it really is excellent and does everything I need.

As for XMLog, it works 100% on Windows 10.

It seems like K1TTT is down at the moment. I've been using W1NR lately, here's my .nod file for W1NR

```
rem
rem Internet DXSpider PacketCluster at W1NR
rem
connect dxc.w1nr.com:7300
match login:
send #me
match de W1NR
send set/page 0
send unset/echo
send show/fdx/25
```

Here's two Mount Athos callsigns to add to the special calls list using the "View/Show Callsign List" menu item (as per the The Weekly DX bulletin).

SV2RSG - Mount Athos (SV/A)

SV2/SV1RP/T - Mount Athos (SV/A)

Mike - W1ECT

Sorry about the first version that included SV1RP

4043. Importing Satellite Data

Yahoo group: XMLog
Date: 2016-05-02 20:17:11 UTC
From: johnki4ro@...
Topic: 4043 Message: 4043

Been a long time since I've used XMLOG. I have an ADIF file that I exported from another logging application that has satellite data in it. When I import the ADIF to XMLOG, none of the satellite data comes in.

Any suggestions?

From: w1ect@...
Topic: 4043 Message: 4045

Hi John,

The only satellite-related ADIF fields recognized by XMLog are the satellite name (SAT_NAME) and mode (SAT_MODE). These fields are not normally displayed so they need to be enabled using the Options/Log Fields... menu item (under the "Log Fields" tab there is a "Show Satellite Fields" option).

ADIF files are just simple text files so you can open your ADIF file with NotePad or WordPad and check to see if the SAT_NAME and SAT_MODE fields do appear.

John and others. If you require an SDIF field that Mike has judged not required by many, you can change the header to match one of the fields that Mike has provided and the data will appear there if fits the size and type data. If you think that Mike should add it, tell Mike what field you want and if he agrees that it is needed he might decide to add it. Of course he can't add it if you do not ask. He may still think he was correct to omit it if only a few ask for it, but he wants to sell programs and will do what suits most folks. Enclose a contribution and the larger it is, the more is will make what you want worth the effort. I find Mike a very reasonable person, but being all things to all people requires infinite time and infinite effort which none of us can produce. Willis 'Cookie' Cooke,
